Probably the most frequent criticism of benefit-cost analysis is that it is based on a single national economic standard. It ignores other effects that are just as valid which cannot be calculated. An excellent example of this is the Interior Department's failure to include the cost of defending against a legal suit which will be filed by the Central Utah Water Conservancy District for breach of Repayment contract No. 14–06–400–4286, dated December 28, 1965 and by the Ute Indian Tribe for anticipatory breach of Water Deferral Agreement Contract No. 14–06–W–194, executed on September 20, 1965. A detailed explanation of these agreements will be presented by other witnesses.

To date, the Federal government has invested over $200 million in the Bonneville Unit. Furthermore, the government expects to be reimbursed a total of $739 million or 86 percent of the cost of the entire Bonneville Unit. This repayment to the government is from the sale of water made available upon completion of the project. This should weigh heavily in favor of completion of the Bonneville Unit, and yet was not considered.

There are significant problems in using the benefit-cost formula to justify the spending of Federal dollars on water projects. The idea of maximum return on money invested implies there is another alternative for the money. The investor uses the cost-benefit analysis to determine the adequacy of alternative investments. There are, however, *no* alternatives for water development.

The businessman also uses the benefit-cost formula to decide whether to spend now or to spend later. But the government must view the trade-off between spending now or later differently than a businessman. Government has an obligation to provide for the future. The use of a high discount rate in evaluating public investment projects implies that present generations are more deserving than future ones. Indeed, the responsibility of government extends beyond the life of *any* individual or generation.

I speak for Utah's entire Congressional delegation when I say that we cannot afford *not* to develop the Bonneville Unit.

My first speech in the House of Representatives was in defense of this water reclamation project. As a descendant of the pioneer group which introduced irrigation to the Great Basin, I am especially aware of the value of reclamation projects. It was the goal of our early pioneers to make the desert "blossom as a rose." They accomplished it by careful management of water resources. Theirs is a good example of providing for future generations through foresight and sacrifice. I believe it is one we should continue to follow.

The Constitution provides that all Federal monies are appropriated *first* by the House of Representatives. As a member of the House Appropriations Committee, I will continue this fight to fund the Bonneville Unit.

Pressing business in Washington demands my immediate return. I thank you for your attention.

NEED TO ELIMINATE UNNECESSARY REDTAPE FOR THE DEVELOPMENT OF NUCLEAR POWER

Mr. THURMOND. Mr. President, on March 3 of this year, I made a statement on the floor of the Senate expressing the importance of speedy and effective research and development of nuclear energy. In that statement, I emphasized the necessity of our Government formulating a nuclear energy policy in which power companies could have confidence. This confidence is so vital in order for these companies to invest the enormous capital which is necessary for the production of nuclear energy.

Last Friday, March 18, 1977, the Virginia Electric & Power Co. canceled ginia Electric & Power Co. canceled plans to complete two nuclear generating units at its Surry nuclear powerplant. The resulting losses could amount to $146 million, which the company intends to charge its customers over a 10-year period.

One of the main reasons cited for the cancellation was the "growing concern over the many uncertainties that face the nuclear industry." This cancellation is but another in a long line. A Nuclear Regulatory Commission spokesman said that "uncertainties" and other problems have hindered the nuclear industry to an increasing degree since June 1974. Including these two, 29 nuclear plants have been canceled and 145 have been delayed or deferred for periods ranging from a few months to indefinitely.

We cannot allow further cancellation of nuclear plants. The need for nuclear energy is more apparent now than ever before. If we are going to have sufficient energy in the future we must develop

these plants now. We must develop an energy policy which will cut all this red-tape which is so discouraging to power companies that they are just giving up altogether.

It is very important to encourage rather than discourage the development of nuclear energy. The Energy Research and Development Administration continues to predict there will be 600 plants operating by the year 2000 based on the continued growth of the economy and the use of energy. There is no way this number will be reached if the present trend continues.

CLEAN AIR ACT AMENDMENTS

Mr. GARN. Mr. President, in this morning's Washington Post I read an interesting article on the impact of clean air legislation on energy development in Virginia. Because of the impact of the 1970 Clean Air Act on the State of Utah, and the potential impact of the amendments to that act considered last year, and now before the appropriate committees of Congress, I am always alert to articles of this sort. In the present case, a phrase or two from the article caught my eye.

"Environmentalists have been saying for years that the bottom line of the environmental movement is a halt in the Nation's growth." Now that is a fact I can testify to of my own experience. When push comes to shove, that is what the environmentalists want, though they will rarely say it in public. In the State of Utah, a power company has proposed a variance in proposed class II air quality standards in cases where a smokestack plume impacts a mountaintop. The variance would not diminish visibility, would have no harmful health impacts, and would not lessen air quality at lower levels of altitude. Privately, environmentalists in Utah will admit as much. However, they oppose the variance because their goal, at bottom, is to halt construction of this and every other powerplant.

Of course, there is never any public debate over this issue, for the simple reason that everyone knows that the American people are not in favor of a no-growth policy. Were we to debate it on the floor of the Senate, and try to pass a bill to that effect, either the bill would lose, or we would lose our jobs. But we persist in passing legislation which places in the hands of radical groups the tools they need to keep growth to zero.

The article also discusses the tradeoffs between air quality and energy. We have just gone through a winter which should have brought home to us how critical our situation is. There is a great deal of talk about increased use of coal, and the need to encourage energy production to avoid the shortages of natural gas we have just experienced. And at the same time, we contemplate passing legislation which would discourage the use of the cleanest coal we have, coal low in sulfur which could make a terrific contribution to our energy supplies.

At this very moment, the Senate Public Works Committee is rushing through a markup on amendments to the 1970 act. Last fall, I filibustered a similar bill, when it was brought to the floor too late in the session for proper understanding and comprehension. That bill contained a provision discouraging the use of clean coal. I understand that the bill now under consideration has a similar provision. I hope that no attempt will be made to bring it up suddenly and ram it through the Senate. The people of the Nation deserve better treatment.

The new administration is supposed to be preparing a policy on environmental issues for submission to the Congress in the next few days. In my view, Mr. President, it would have been better to wait for the Carter position before pushing ahead so rapidly on these clean air amendments. It is true that Mr. Carter appears to be very environmentally minded, but he also has the benefit of some extremely capable and well-informed energy advisers, in Mr. James Schlesinger and Mr. Jack O'Leary.

I very much hope that the administration will take a realistic tack on energy production, and will adopt an environmental policy consistent with a modest degree of growth. Any other policy will have devastating impacts on jobs in the United States, and on our ability to produce the energy we need for our use, and to avoid increased dependence on foreign oil.

During the first markup sessions on the clean air bill last month, Leon Billings, the staff director, in response to a question from Senator HART, pointed out that the class I numbers in the bill were "arbitrary" while the class I values imposed by the bill were "subjective." I hope, Mr. President, that we can find a better basis for legislation than that, and that the administration will help us look for it.

I ask unanimous consent that the article from this morning's Post be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COMPLEX AIR QUALITY RULES IMPERIL PORTSMOUTH REFINERY

(By Ken Ringle)

When the Portsmouth, Va., City Council voted two years ago to permit construction of the largest oil refinery on the East Coast, city officials dreamed of the jobs it would create and the energy-hungry East Coast anxiously awaited the oil it would produce.

The refinery was to be the cleanest that modern technology could produce—so clean that biologists from the Virginia Institute of Marine Science predicted the refinery and its loading operations would have "minimal effect" on the fragile marine life nearby.

But today, serious and complex environmental questions are being raised about the refinery, its projected cost has risen from $350 million to $550 million, and its construction is still more than a year off.

Clouding the project's future is an Environmental Protection Agency objection that could block construction of the refinery on grounds that it would contribute to the already polluted air of Hampton Roads.

The debate over the Portsmouth refinery is a prime example of a major conflict between the demanding requirements of the Clean Air Act of 1970 and the professed federal goal of the U.S. becoming energy self-sufficient.

For nearly a decade, since the awakening environmental consciousness of the late 1960s, the battle for cleaner air and water has been fought on two basic questions:

How clean should the government require the discharges of specific industries to be?

How clean should the government require the environment itself to be?

Answering the first question has been largely a technological and political battle. By the EPA's own estimates, the Portsmouth refinery would contribute fewer pollution-causing hydrocarbons to the air in the Tidewater area than the trees in the Dismal Swamp 12 miles away.

But answering the second question on how clean the environment should be is proving to be a social and economic battle as well, for ultimately it becomes the battle over industrial growth itself.

The refinery proposal by the Hampton Roads Energy Co. would create a 175,000 barrel-a-day refinery on a 628-acre site in Portsmouth, a dingy, industrial city of 106,000 people on the south shore of Hampton Roads.

City officials estimate the project will increase tax revenues by 40 to 50 per cent, provide 3,000 temporary construction jobs and 500 permanent jobs.

Not everyone is thrilled with the prospect of the refinery, of course. Environmental groups in other Tidewater localities have filed suit to block the project, raising the prospect of oil spills devastating the seed oyster beds in the lower James River. The biologists at the marine institute, confident that the refinery itself won't harm marine life, are troubled by the possibility that refinery-bound barges and tankers might spill their cargo and blacken the surrounding waters.

But virtually none of the opposition has surfaced in Portsmouth itself, and the refinery supporters believe their only real problem lies in Washington.

All but one of the environmental permits necessary for the refinery have been granted, including one from the Virginia State Air Pollution Control Board. It was issued on the basis of the refinery's projected compliance with the state's air quality standards—standards previously approved by EPA.

But late April, Dr. Peter Finkelstein of the EPA's Philadelphia regional office voiced a surprise, 11th-hour objection to the refinery.

His forum was a hearing on the refinery's request for a river-dredging permit—a request routinely circulated by the U.S. Army Corps of Engineers to other federal environmental agencies for comment.

In a terse, 500-word statement, Finkelstein said the air quality issue was the one aspect of the refinery "of greatest concern to EPA." Noting that the air in Hampton Roads is already overloaded with smog-breeding photo-chemical oxidants, Finkelstein said it "is not reasonable to allow new sources into an area where standards are being violated by 200 to 300 per cent . . . The Environmental Protection Agency finds the proposed refinery to be environmentally unacceptable."

The Finkelstein statement stunned the refinery supporters because of its implications. It said, essentially, that the best pollution control techniques are no longer necessarily enough for industry to provide, even when those techniques keep that industry's emissions far cleaner than state and federal agencies require, as the Portsmouth refinery would do. It charted, in brief, the limits of industrial growth.

The crunch has been coming. Environmentalists have been saying for years that the bottom line of the environmental movement is a halt in the nation's growth. Lawyers have been saying privately for at least three years that the Clean Air Act was a time bomb, containing all the legal machinery needed to block almost any new project, in-

cluding shopping centers, housing developments and factories.

"This law that (Sen. Edmund S.) Muskie passed is nuts!" fumed John K. Evans, president of the Hampton Roads Energy Co. "Every time they paint a destroyer down there (at the Norfolk Naval Shipyard in Portsmouth) they put more hydrocarbons into the air than we would in a year."

Officials of Hampton Roads Energy—whose principal financial backer is the Atlanta-based Cox newspaper chain—make two major complaints.

They said some of the EPA's overall air quality standards are unattainable because they make no allowance for "background" pollutants from natural sources.

And they said the agency's "trade-off policy," unveiled last December, puts the burden on new industries to clean up the environmental degradation produced by existing industries.

"That's not only unfair," Evans said, "it's unconstitutional."

The clean air standards causing the most trouble for the refinery—and for other industries around the country—are those for hydrocarbons and their photochemical by-products.

Hydrocarbons are a class of organic compounds, made up of atoms of hydogen and carbon, produced in hundreds of gaseous varieties by everything from automobile engines to decaying trees.

In the presence of sunlight they combine with oxides of nitrogen to produce photochemical oxidants—hundreds of molecules suspended in a haze that can be either natural (the "smoke" over the Great Smoky Mountains) or unnatural (urban smog).

One of the principal photochemical oxidants is ozone, a pungent, unstable, pale blue gas about which even the relative handful of ozone experts in the world know relatively little.

As a gaseous layer in the stratosphere, ozone absorbs harmful ultraviolet radiation from the sun, and that's good. But in the urban atmosphere of industrial gas and auto exhausts, it helps form smog.

When the Clean Air Act of 1970 was written, the nation's target ozone standard was set on the basis of ozone levels monitored in smog-covered Los Angeles and set at .08 part per million—a level not to be exceeded more than one hour a year. After all, it was thought, ozone is present in nature only in very small amounts.

But when new and improved monitoring techniques were used elsewhere in the country, beginning in 1971, ozone began turning up everywhere.

In 1975, researchers with the New York state government, after monitoring both rural and urban sites, found ozone peaks about the same in the country as in the city.

At remote, unpopulated Whiteface Mountain, practically on the Canadian border, they found the ozone level nearly twice that in Houston and nearly as high as in Los Angeles.

The implications of these and other studies was plain: government and industry might be successful in reducing the ozone level in every smokestack and exhaust pipe, but they would never, apparently, bring the overall ozone level of many states down to the target levels of the standards.

The Portsmouth refinery, for better or for worse, may be blocked because of an ozone level in the air over Hampton Roads, which the refinery backers can do little to correct.

What they could do was outlined in the trade-off policy through which the EPA has sought to temper the nogrowth implications of the Clear Air Act. The policy permits industry to locate in an already polluted area only by eliminating existing pollution sources elsewhere in the area.

This has led Evans and his backers to discuss—and reject—such proposals as buying cars in Hampton Roads, buying and closing old dry cleaning plants (an existing hydrocarbon source) or financing a pollution clean-up program for some other industry.

Last week they trooped to Capital Hill to plead for a five-year suspension of the ozone standard until scientists know more about the gas and what it does.

Karl Braithwaite, a staff member on Muskie's environmental pollution subcommittee, said the committee is aware of the complexities of hydrocarbons, oxidants and ozone.

"If you get into this subject very deeply and you don't come out confused," he said, "then somebody told you a lie."

But he said many members of Congress are reluctant to make any move that might appear to be relaxing the pressure to clean up the environment.

SOUTH CAROLINA VACATION PLANNING MONTH

Mr. THURMOND. Mr. President, on March 10, 1977, the South Carolina General Assembly passed a concurrent resolution to designate the month of March 1977, as South Carolina Vacation Planning Month, to recognize the economic value of travel and tourism, and to request the national administration and the Congress of the United States to support the travel industry.

On behalf of the junior Senator from South Carolina (Mr. HOLLINGS) and myself, I ask unanimous consent that this resolution be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

A CONCURRENT RESOLUTION

To recognize the month of March, 1977, as South Carolina Vacation Planning Month, to recognize the economic value of travel and tourism, and to request the National Administration and the Congress of the United States to support the travel industry

Whereas, travel and tourism continue to grow in prominence as a major economic force in South Carolina, in spite of national problems such as inflation, energy shortages and unemployment; and

Whereas, Soutn Carolina has a wide variety of recreational, scenic, historic, cultural and vacation attractions from the mountains to the seashore that have appeal to visitors as well as residents of our State; and

Whereas, expenditures by nonresident travelers have reached a record of more than a billion dollars in 1976; and

Whereas, nonresident travelers paid over eighty million dollars in state taxes during 1976 which provided urgently needed funds to help balance the state budget and finance education, health care and many other public services for South Carolina citizens; and

Whereas, South Carolina has the opportunity to further increase its share of the nation's eighty billion dollars in travel expenditures; and

Whereas, all statistical barometers such as tourist inquiries, welcome center visitations and reports from the State's resort and travel businesses indicate that 1976 was a record year for travel and tourism in South Carolina: Now, therefore, be it

Resolved by the House of Representatives, the Senate concurring:

That the month of March, 1977, is recognized as Vacation Planning Month in South Carolina to encourage all South Carolinians to see and enjoy the vacation, recreation, scenic, historical and cultural attractions of our State in 1977.

Be it further resolved that all South Carolinians are invited to support the efforts of the Governor, the General Assembly, the South Carolina Committee on Tourism, the Department of Parks, Recreation and Tourism, the South Carolina Travel Council and other agencies and organizations to attract more visitors to South Carolina so as to increase the value of the travel and tourism industry to the State's economy and general welfare.

Be it further resolved that the National Administration and the Congress of the United States are requested to recognize the importance of the nation's eighty billion dollar travel industry by supporting this vital segment of the nation's economy.

Be it further resolved that the South Carolina Department of Parks, Recreation and Tourism is to report to the General Assembly concerning the impact of travel on the State's economy during 1976 by May, 1977.

Be it further resolved that copies of this resolution be forwarded to the President of the United States and each member of the South Carolina Congressional Delegation in Washington, D.C.

IN-SITU RECOVERY OF OIL SHALE

Mr. CRANSTON. Mr. President, many thousands of people are currently at work to develop a consensus on a national energy program that can achieve a number of goals: to stretch our available energy supplies through strict conservation, to develop new resources as necessary, and to accomplish both in an economically and environmentally acceptable manner. The Congress, the energy agencies of the administration, private industry, environmental groups, and many others are focusing now on the many proposed solutions we have entertained over the last several years with the hope that we can fuse a consensus and enact the necessary legislation during this next critical year.

Among the most controversial and heretofore expensive energy resources yet to be tapped significantly in the United States is oil shale. In the mountains of Colorado, Utah, and Wyoming there are estimated to be 2 trillion barrels of shale oil—the largest potential source of recoverable oil in the world. Unfortunately, tremendous environmental costs have been associated with the conventional methods of processing usable oil out of the shale in which it is trapped. And production costs have remained far higher than even expensive imported oil.

Recently, a modified "in-situ" process has been developed that offers potential environmental and economic advantages over conventional processing techniques. This new process is described in a February 19, 1977, article in the New York Times by Dr. Armand Hammer. Dr. Hammer is the chairman of the board and the chief executive officer of the Occidental Petroleum Corporation of Los Angeles, the company which developed the in-situ method of tapping oil shale.

This new process estimates production costs at $8 to $11 per barrel of raw shale oil, considerably below the costs of above-ground techniques. And since it is done below ground, the environmental hazards are much more manageable than conventional methods.

Mr. President, I think my colleagues

will find Dr. Hammer's article of interest, and I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OIL SHALE DOWN THERE, WAITING TO BE TAPPED

(By Armand Hammer)

LOS ANGELES.—Over millions of years, huge quantities of organic matter were created in the Rocky Mountains, locked in as a rock-hard substance called oil shale. Heat this rock to 900 degrees Fahrenheit and these organics produce oil comparable to imported and domestic crude oil. In Colorado, Utah and Wyoming there are nearly two trillion barrels of shale oil in place. It is the largest potential source of recoverable oil in the world.

Fifty years ago, attempts were made to obtain this oil, but the costs were prohibitive. A modern, below-ground method called "in situ" (meaning "in place") has been developed to tap these extensive oil deposits. This is an economic method offering high resource recovery and low environmental impact.

With a new President and an Administration committed to a sound energy policy, the opportunity now exists to establish a national program to develop this alternative source of oil.

On Nov. 26, 1976, three Government agencies concerned with energy—the Interior Department, Federal Energy Administration and Energy Research and Development Administration—issued a report to the President's Energy Resources Council calling for an effective oil-shale policy. The report stated in part that "demonstrating the commercial production of shale oil may prove to be the single most important short-term action that can be done to improve liquid fuel supply," and then the report declared that "a modified in-situ process that offers potential economic and environmental advantages over conventional processing techniques" has been developed. (The process is patented.)

The report further states that shale oil can be competitive today with imported oil, showing estimates of production costs for the in-situ process at $8 to $11 per barrel of raw shale oil—approximately half the cost of above-ground methods.

The most recent tests produced 30,000 barrels of oil from a single underground chamber that was as high as a 25-story building. A Michigan utility successfully burned 4,000 barrels of this oil as a substitute for imported crude oil, while the rest was sold to a refinery.

Our company intends to move forward immediately toward full-scale production of 50,000 barrels a day. An independent engineering estimate agreed that the in-situ process could achieve economic parity with imported oil.

Since most of the shale lands are owned by the Federal Government, commercialization on a vast scale can be accelerated by a Government-owned, privately-operated program, similar to the manner in which the synthetic-rubber industry was started in World War II.

A 200,000-barrel-per-day project operating for 22 years on a single 5,000-acre Federal lease would cost about $1 billion and take about four years to complete. While there may be risk associated with such an effort, it is worth taking. No one company could possibly dominate the field, since Government regulations prohibit any company from leasing more than 5,000 acres of Government land.

Further, the Government should earn a reasonable return on its initial capital investment, based on its own estimates. Once the shale plant is operational, there would be no need for further Government investment.

For its own use, the Government has been offered a free license by our company, while private companies would receive licenses for a reasonable fee.

A second phase would bring private companies into competitive bidding for additional leases. The royalties earned by the Government could be substantial, since it owns approximately three million acres of shale land.

The in-situ process works entirely inside the mountain, and its technology has manageable and acceptable environmental impact. Unlike the above-ground method of producing shale oil, little water is needed, nor is there any contamination of the spent shale. The shale rock mined to open tunnel entrances is stored in canyons in its natural state, thus producing no environmental problems and becoming an oil reserve for future generations. The process requires fewer people and allows for a planned, socially desirable and economically acceptable development of the western slope area of the Rocky Mountains.

The overall result of this suggested program would be the beginning of an industry that would reverse the drain of billions of dollars of foreign exchange, create needed new jobs, give the Government additional revenue and, most important, free America from dependence on imported oil that can be cut off at whim.

COMMON SITUS PICKETING—MARSHALL'S DERELICTION OF DUTY

Mr. HATCH. Mr. President, on March 17, the Secretary of Labor, Ray Marshall, testified in favor of the common situs bill before the Subcommittee on Labor of the Committee on Human Resources. He stated that no thorough study of the economic impact of the bill has been done by the U.S. Department of Labor, "because it is difficult to anticipate what the effect of the law will be."

What I want to know is what is the Secretary of Labor doing testifying in favor of a bill and what is the U.S. Senate doing considering passing a bill when neither Secretary Marshall nor the Senate knows "what the effect of the law will be." I would hope that the Senate does not routinely pass laws without regard to their effects.

I also wonder why the Secretary finds it so difficult to anticipate the effects of the law. Based on his own testimony before the Subcommittee on Labor and on his own published economic writings, one effect seems clear enough. In an article, "The Economics of Racial Discrimination," published in the September 1974 issue of the "Journal of Economic Literature," the Secretary made the point that black workers have difficulty getting into local craft unions—precisely the type of union prevalent in the construction industry. To quote him, he stated that:

> Whether or not these unions are able to bar blacks depends primarily on their control of entry into the occupation. Craft unions, for example, ordinarily have considerable control of the supply of labor. The main job control instruments of craft unions are control of training, entry into the trade and union, and job referrals.

In his testimony before the Subcommittee on Labor the Secretary admitted that construction unions with common situs would be able to exercise greater control over the labor force.

Therefore, one might reasonably conclude from the Secretary's writings and testimony that one effect of common situs will be to strengthen the barriers against minority participation in the construction industry.

The Secretary also testified that the second part of the bill, the so-called Dunlop reform bill, "would tend to improve productivity in the industry and moderate wage pressure." We had certainly better hope so, because the first part—the common situs part—will do the opposite. To establish a monopoly in the provision of a labor service will have the same effect on raising the price of the service as establishing a monopoly in the provision of a product would have in raising the price of the product. Generally, both professional economists and the U.S. Government are against raising prices by establishing monopolies.

The increased production time lost by the ability of common situs picketing to close down an entire project will drive up the cost of construction. Subcontractors in anticipation of being shut down as a result of situs picketing will have to cover themselves against the higher anticipated costs of greater delays by bidding higher on projects. The higher bids will be said by the unions to contain higher profits and will stimulate higher wage demands and strikes to enforce them. This is not a process that reduces costs or moderates wage pressure. And productivity is not improved by increased time off the job.

On March 22, the Labor Subcommittee heard from Dr. Rinfret, a renowned economist, who to my knowledge has done the only credible economic analysis on the impact of situs picketing. His findings and conclusions are undisputed. He conclusively finds: (1) S. 924 threatens the continued participation of the small businessman in the construction industry; (2) works against the economic interests of minority groups and their integration into the industry; (3) will increase already unacceptably high rates of unemployment; and (4) will add to the country's general inflationary situation which we are so desperately trying to control.

Dr. Rinfret was shocked, as was I, when we learned Secretary Marshall did not think an economic analysis of this far-reaching change in the law was warranted. Rinfret accused Marshall of being derelict in his duties and I agreed. Rinfret then suggested that input would be most helpful from the Commerce Secretary, the Chairman of the Federal Reserve Board, and the Director of the Office of Management and Budget in order to fully understand and evaluate the economic ramifications of this bill, and I requested that the subcommittee make these requests.

In the interim, Dr. Marshall has agreed to prepare an in-depth analysis. I do not know whether the Labor Subcommittee will call upon those expert witnesses referred to above who can shed needed light on this dark situation.

As a minimum, the Labor Committee should have another day of hearings so

that Rinfret and Marshall, giants in their fields, can test their respective economic conclusions. The fate of this industry and the stability of this Nation warrants nothing less.

For the information of my colleagues, I ask unanimous consent that Dr. Rinfret's report now be printed in the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

FEBRUARY, 1977.

COMMON SITUS

[Charts mentioned in text not reproduced in RECORD]

1. Introduction. This study attempts to analyze the economic impact of common situs on (1) minorities, (2) small business, (3) unemployment and (4) inflation.

The conclusions of this study are couched in terms of tendencies. It is not possible to state dogmatic conclusions because the subject is complicated and the available data leave much to be desired.

It is recognized that common situs may be as much a political and moral issue as it may be an economic issue. Political and moral considerations are outside the scope of this study. This study carries no ideology. It is a straightforward attempt to analyze the economic impact of common situs.

2. Conclusions. In the simplest form possible and on the assumption that the analysis which follows will be read in conjunction with the statistical tables which are a part of this report, our conclusions are as follows:

One. *Common situs would most likely prove to be a threat to the small entrepreneur in the construction industry.*

Two. *Common situs would tend to work against the economic interest of the minority groups and would most likely hold back their economic integration into the construction industry.*

Three. *Common situs would tend to increase unemployment in the construction industry and would contribute to an already unacceptable level of unemployment.*

Four. *The impact of common situs on general inflation is almost impossible to measure in a direct way. It is fair to say, however, that common situs would add to the general inflationary tendencies which we are now experiencing.*

These conclusions are not valid under all legislative conditions but only in the context of the legislation now pending before Congress. It is obvious that these conclusions would have to be changed or modified depending on the extent to which legislation before Congress is changed or modified.

3. Analysis. In this section of the report we indicate the reasoning and the thinking behind the conclusions. In order to keep this report unencumbered, we have confined the great body of statistical tables to the Appendix. Those statistical tables are, however, part and parcel of the analysis and should be considered an integral part of this report. Before considering the analysis of the economic impact of common situs on the entrepreneur, minorities, unemployment and inflation, it is worthwhile to examine the construction industry in general at this particular moment.

One. *Economic Overview.* The following may be said to be the current economic situation in the construction industry:

(1) *A high rate of unemployment.* In 1976 the construction industry had an unemployment rate of 15.6 percent as compared with a national unemployment rate (which includes construction) of 7.7 percent. Both figures were higher in 1974. There has been double-digit unemployment in construction in every year since 1970 except 1973, whereas there has been no double-digit unemployment for the country as a whole.

(2) *Lower volume.* The volume of new construction put in place (in 1967 dollars) reached a peak of $93.3 billion in 1973. The latest volume figure which is available for this series is for the month of December 1976. In that month, the volume of new construction put in place was $74.7 billion (annually rated).

(3) *High hourly earnings.* The average hourly earnings of construction workers (skilled, semiskilled and unskilled) has materially exceeded those in manufacturing industry. In 1976 average hourly earnings in construction were 48 percent higher than those in manufacturing. The average hourly earnings in both construction and manufacturing have increased every year in the past decade. The recession of 1973–1975 did not stop the upward thrust of these average hourly earnings.

(4) *Construction costs increase faster than general prices, i.e., the construction industry has a greater inflationary bias than the economy as a whole.* The Engineering News Record Building Cost Index is a recognized measure (one of several) of construction costs. In 1965, this cost index was .99 of the Consumer Price Index, .97 of the All-Commodities Wholesale Price Index and .97 of the industrial component of the Wholesale Price Index. In 1976 these ratios were 1.24, 1.15 and 1.16, respectively. It should be pointed out, however, that the 1976 ratios were lower than those of 1972–1973. In the past several years, the rate of increase in consumer prices and in wholesale prices has been somewhat greater than the rate of increase in construction cost indexes.

(5) *Productivity has dropped precipitously.* This drop in productivity (output per man-hour) in construction may be a function of the decline in the volume of new construction put in place in the past several years, but if so, it has exceeded the decline in productivity in manufacturing industry which occurred in the 1973–1975 recession. On the base of 1967=100, productivity in the construction industry was 94.0. In the nonfarm business sector it was 114.2 and in the manufacturing sector it was 123.5.

(6) *Housing is disappointing.* This area of the construction industry merits being singled out for attention because it is tied so intimately to national economic goals. Housing starts (mutliple and single-family) peaked at 2.36 million units in 1972. In 1976, housing starts recovered from their 1975 low and reached 1.54 million units.

This level of starts was below general expectations for the industry. At the end of 1975, most industry analysts thought that housing starts would approximate 1.7 million units in 1976 and could be as high as 1.8 million units. There are many, many problems in the economic structure of housing, not the least of which is the fact that the average sales price for a new one-family house has more than doubled since 1965. It now takes more hours of work for the average American to buy a new home than at any time in the postwar period.

To sum up, the construction industry currently suffers from low volume, low productivity, high costs and high selling prices.

Two. *Minorities.* The economic statistics on minority participation and representation in economic sectors and in the labor unions leave much to be desired. In some cases the statistics are partial and incomplete, and in some cases there are no good time series. There is frequent disagreement about the statistics gathered by the unions themselves as compared with those gathered by the U.S. Government. We adhere to the rule, which we have followed for twenty-five years, that the primary source for statistics should be the U.S. Government.

Union representation in the contract construction industry, as a percent of total union membership, appears to have reached a peak of 13.8 percent in 1962. In 1974, the latest year for which we have comparable data, contract construction union members represented 11.3 percent of all union members in the United States.

In 1974, the total membership of the reporting locals in the building trades was 1.33 million people. Of this number, there were about 209,000 people in minority groups; about one-half were black and the remainder were people with a Spanish surname, Indians, Orientals and others. In 1974, the minority participation in the building trades unions reached 15.7 percent, which appears to have been the highest level in those years for which we have records.

The construction industry appears to have about the same percentage of blacks as does manufacturing when the measure of "blacks as a percent of wage and salary workers" is used. In 1970 the figures were 10.2 percent for construction and 10.7 percent for all manufacturing. The highest percentage of blacks is found in Services and Government.

Black union members as a percentage of wage and salary workers in all manufacturing in 1970 was 12.4 percent. In Services and Government the figures were 18.6 percent and 16.5 percent, respectively. Black union members as a percentage of wage and salary workers in the construction industry in 1970 was 8.7 percent, which is the lowest for any major sector.

Nonunion blacks as a percentage of wage and salary workers in all manufacturing in 1970 was 9.8 percent. In Services and Government the figures were 13.5 percent and 11.8 percent, respectively. The figure for the construction industry was 11.2 percent.

Examination of all the sectors in the economy in 1970 indicates that in all those sectors except "transportation and utilities" and "construction", black union members constituted a higher percentage than did nonunion members. In "transportation and utilities" and "construction", the percentage of nonunion members exceeded that of union members.

In the September, 1974 *Journal of Economic Literature* in an article entitled "The Economics of Racial Discrimination: A Survey", the present Secretary of Labor, Ray Marshall, makes the point that black workers have difficulty getting into local craft unions (the type of labor organization prevalent in the construction industry). Ray Marshall states that "whether or not these unions are able to bar blacks depends primarily on their control of entry into the occupation. Craft unions, for example, ordinarily have considerable control of the supply of labor. The main job control instruments of craft unions are control of training, entry into the trade and union, and job referrals."

It would appear that construction unions with common situs would be able to exercise greater control over the labor force. Historically, the minority groups have not participated as fully in the construction industry as they have in other industries.

Three. *Small Business.* The construction industry appears to be dominated by small businesses.

In 1972, there were about 438,000 firms engaged in contract construction. The number of firms with one to nine employees was about 352,000. These firms, therefore, represented about 80 percent of all the firms engaged in contract construction.

There were only about 4,520 firms with 100 or more employees engaged in contract construction in 1972. These firms represented about one percent of all the firms engaged in contract construction.

The construction industry has a very high rate of business failures. We have consistent statistics for business failures for the past decade. In 1975, construction business failures represented close to 20 percent of all business failures in the U.S. That was the high point. The lowest percentage of failures

was registered in 1972, when it was 14.4 percent. For the first ten months of 1976, construction failures represented 18.2 percent of all business failures.

The average liability per failure in the construction industry has tended to increase sharply in the last decade. In 1965 the average liability per failure was about $116,000. It peaked at about $286,000 in 1974 and was about $236,000 for the first ten months of 1976 (not annually rated).

The construction industry has a greater percentage of workers on strike than does the economy as a whole. In 1973, the percentage of workers involved in strikes for "all industries" was 3.0 percent. For manufacturing it was 4.9 percent. For construction it was 10.1 percent. This tendency for a greater percentage of workers in the construction industry to be involved in strikes is longstanding and persistent.

Contract construction stoppages have been declining steadily as a percent of all U.S. stoppages since 1965. In 1965 contract construction stoppages represented about 24 percent of all U.S. stoppages but declined to 10.1 percent by 1973. Construction workers represented 3.8 percent of the total employed civilian labor force in 1965 and 3.9 percent in 1975. The percentage of contract construction work stoppages in 1965 and in 1973 exceeded the percentage of contract construction workers in the total civilian labor force.

The construction industry is dominated by very small businesses with a high bankruptcy rate, high liabilities per failure, a high rate of strikes and a high rate of work stoppages.

It would appear that common situs would have a negative impact on small businesses as they now exist in this industry and would work against free entry of small businesses into the construction industry.

Four. *Unemployment.* The construction workers' peak employment level was reached in 1973 with 3.3 million people. In 1976, it totaled approximately 2.7 million people, about the same number as in 1965.

The peak unemployment rate in the construction industry was reached in 1975 at 18.4 percent. The national average unemployment rate for the same year was 8.5 percent. As noted earlier, the 1976 unemployment rate in construction was 15.6 percent. The national average was 7.7 percent.

Average hourly earnings in the construction industry, as noted earlier, have consistently exceeded average hourly earnings in manufacturing. In 1976, for example, construction average hourly earnings were 1.48 times those in manufacturing. The cost indexes for construction, as noted earlier, have consistently exceeded national measures of inflation.

The construction industry is by and large a craft industry, not readily adaptable to mass production techniques. As indicated earlier, productivity (output per man-hour) in the construction industry has fallen behind that of the rest of the private sector and has in fact declined in the past several years.

Labor costs are an integral part of construction costs. Labor costs in the construction industry exceed those of the economy as a whole. It seems fair to say that an important part of the problem of the declining volume of construction and declining construction employment is relatively high labor costs.

To the extent that common situs increases the costs of construction and to the extent that common situs exerts extraordinary upward pressure on wages, then its end result may be to increase unemployment in the construction industry and to decrease employment opportunities. This could adversely affect the ability and opportunity to integrate minority groups into the construction trades.

Five. *Inflation.* To the extent that common situs would not result in increased work stoppages in the construction industry and to the extent that wage increases in the construction industry would not exceed productivity, common situs would not be inflationary.

If common situs were to result in increased work stoppages and wage increases which would exceed productivity, then it would be inflationary.

The past is not necessarily a precursor of the future, and events in the future frequently turn out to be very different from what had been anticipated.

The history of the construction industry includes increases in costs which exceed national measures; average hourly earnings which are above national averages and which, until recently, tended to increase faster than the national average; lower productivity than the national average; and a relatively high rate of work stoppages. These are the perfect ingredients for inflation.

On the base 1967=100, wage costs in the construction industry were 187 in 1976 and material costs were 188. This simple comparison indicates the complexity of the inflation problem. Each bit of inflation is a part of the whole and the whole influences each bit.

It would appear that common situs would tend to add to the inflationary bias of the United States economy at the present moment and would work against efforts to minimize or moderate inflation trends.

4. Conclusions Revisited. This analysis and these conclusions are based upon known factors in proposed common situs legislation. It is realized and understood that proposed legislation attempts to offset some of the conclusions arrived at in this report. This analysis has attempted to take into account proposed safeguards in common situs legislation.

Taking all these factors into account, it would appear that common situs legislation to date would work against minority groups and small businesses. It would tend to increase unemployment and/or decrease employment opportunities and tend to increase the inflationary bias of the American economy.

SENATOR LEAHY ADDRESSES ENERGY NEEDS OF AGRICULTURE

Mr. HUMPHREY. Mr. President, I wish to share with my fellow Senators an address by our colleague from Vermont, Senator LEAHY, which was presented to the National Association of Directors of State Departments of Agriculture at their recent meeting here in Washington.

In this address Senator LEAHY discussed one of the most crucial problems now facing our food system: Agriculture's increasing dependency on energy. He points out that the productivity and efficiency of our farmers is largely based upon finite or interruptable sources of energy, and as such has become too vulnerable for comfort.

He correctly states that we must adopt a priority research effort directed toward providing low-cost, nonfinite energy for our agricultural production system.

Mr. President, I ask unanimous consent that Senator LEAHY's address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH BY SENATOR LEAHY

Throughout the '60s and into the '70s, an abundant supply of food and fibers was taken for granted. The "farm problem" was bin-bursting surpluses. Our problem was on how to balance production with demand, and how to assure farmers adequate price and market protection. The tide began turning in 1972, and by 1974 the situation was clearly inverted. The "farm problem" was one of scarcities.

With the dramatic turnabout, agriculture went from back page filler to front page headlines.

This new attention has been accompanied by a new awareness. New faces are testifying at the committee hearings—consumer leaders, environmentalists, minorities, migrant farm workers, religious leaders, and all those who are concerned with domestic nutrition and the hunger in the less developed countries.

This new awareness can be an enormous asset if we approach it in a positive manner. Our chances of achieving positive results in Congress will increase enormously if we can use this new public consciousness to build a broad base of support for our efforts.

The climate for more positive results is further enhanced by an improved relationship between Congress and the Department of Agriculture. Far too often, the discord and political stalemate of recent years created an unproductive atmosphere. I do not predict that we will agree on every letter, every coma, of every bill. But I do predict an atmosphere in which we can get more accomplished with a minimum of controversy.

In the last few weeks the spotlight has been on the Farm Bill hearings, which has sparked much discussion. The hearing room has consistently been jam-packed, and additional hearings have had to be scheduled.

The testimony so far has brought forth clearly that whatever legislation is finally enacted, it must delicately balance a number of competing objectives—maintenance of a strong market orientation for American agriculture, the greatest possible freedom for farmers to make their own management decisions, maximum price assurance to protect farmers from economic disaster as well as to provide a stable supply of food and fiber to consumers, and minimum costs to our taxpayers.

This bill is truly a comprehensive measure, treating a broad scope of topics. Necessarily, it deals with our basic agricultural commodity programs, with the very important domestic feeding programs, with our principal international food program, P.L. 480, and with many other important food and agricultural subjects.

Most of these policy initiatives deal with problems of the present or of the past. However, another section of the bill—improved agricultural research—looks to the future.

The goal of agricultural research is to develop the knowledge and technology to insure an abundance of high quality agricultural products, maintain a permanent and viable agricultural system, improve the nutritional well-being of our people, improve the management and use of our natural and renewable resources, and promote higher living standards in rural America.

Our support in the past for agricultural research has been, to say the least, inadequate. Despite the incredible turnabout from agricultural surpluses to severe shortages, agricultural research last year was funded at the same level as in 1967. Contrast this with the fact that HEW and ERDA were each allocated five times as much for research and development in their areas of concern.

The Farm Bill attempts to reverse this lack of support. It specifies that food and agricultural research will receive an amount equal to at least one half of one percent of the sum total of the value of domestic expenditures and gross agricultural exports. It attempts to achieve more cost-effective research programs while maintaining the continuity and the strength of the current system.

However, increased funding routinely allocated for the types of research conducted in the past would not necessarily be a step forward. Agricultural research must head in new directions. As Dr. S. H. Wittwer, Chairman of the National Academy of Sciences Board on Agriculture and Renewable Resources, recently stated:

"Food production strategy in the past was to grow two ears of corn or two blades of grass where one grew before. Enhancement of productivity should still rank first in agricultural priorities. But there are now other urgent priorities."

One of these urgent priorities is intensive research for reducing agriculture's dependence on finite or interruptible sources of energy.

Agriculture has changed from being labor-intensive to being energy-intensive. In the first decade of this century it required one farmer to feed six non-farmers. Today, that ratio is almost one to fifty. But there has been a trade-off. In the same span of time we have increased 20 fold our agricultural energy usage.

Few Americans realize that it requires as much energy to grow an acre of cauliflower as it does to manufacture a six-passenger automobile.

The fact is that agriculture is one of our most significant energy consumers. Agricultural energy, accounting for about 3.5 percent of all U.S. energy use, is a modest amount compared with that of transportation, which uses 25 percent of the nation's energy, or that of residential and commercial space heating, which uses about 18 percent of the nation's energy. Among U.S. industries, agriculture ranks third after steel and petrochemicals among the major consumers of energy.

Because of the relatively modest amount of the country's total use of energy going into agricultural production, it is important to keep in mind that any reduction in energy going to that area would have little influence on the total U.S. energy situation, but would have a serious disruptive effect on agricultural output.

Therefore, we should ensure that in the event of another energy crisis agriculture receives the amount of fuel necessary to continue production. We must prepare ourselves with something other than stop-gap measures. In coming years shortages are going to become increasingly more frequent, for many of our present sources of energy may soon be greatly diminished and in some cases exhausted completely.

As a result, our food production system has become too vulnerable for comfort. We must direct an increasing amount of our research funds to developing easily-accessible, low-cost, renewable energy supplies.

Let me give you some examples of the kind of research I am talking about. In my own state of Vermont, wood has become a major source of energy both on and off the farm. A recent study showed that 55 percent of Vermonters used wood as a supplemental source of heating, while 8 percent used wood as their primary source. In addition, much research has been done in Vermont on Anaerobic Digesters as a Methane gas generator. Clearly, with the dairy industry as a major component of agriculture in Vermont, it only makes sense to effectively use what was once considered "waste."

And across the country other programs have also demonstrated that there are effective alternatives to our present production methods. For example, sludge-treated infertile sandy Minnesota soil produced over 200 bushels of corn per acre during the past two years. No soil or water pollution was detected during this time, nor was quality impaired. This method saved energy by minimizing the need for fertilizer and eliminating the expensive incineration. In addition, Agricultural Research Service projects have demonstrated the technical feasibility of curing or drying several kinds of crops, and of heating livestock shelter and greenhouses with solar power.

It is my hope that with adequate research and development our agricultural procedures can in time become self-sufficient in their energy supply.

As I have said, any reduction in energy usage in agricultural production will have little influence on the total U.S. energy picture. But the fact is that the steps in our food system after the food is produced uses four times the energy required to produce the food. Whereas the production of food requires only 3.5 percent of our nation's total energy consumption, the food system as a whole—storing, processing, packaging, transporting and cooking—accounts for over 16 percent of all energy used in the U.S.

Clearly then, we who are involved with agriculture, in any way, have a responsibility to share in the national effort to reduce our use of energy and to help find new renewable sources.

DNA-SPLICING, AKA PROGRESS

Mr. BUMPERS. Mr. President, since February 4 when I introduced S. 621, the DNA Research Act of 1977, there has been a growing expression of concern from my colleagues and the public about research involving recombinant DNA molecules. Several additional bills have been introduced on the subject, and the administration is also expected to have a proposal soon. I am very pleased to note that the Subcommittee on Health and Scientific Research, under the able leadership of Senator KENNEDY, will hold hearings on these bills on April 6, 1977. We can be confident that the distinguished Senator from Massachusetts, who has led the Senate for many years on health-related issues, including that

of recombinant DNA research, will work with his subcommittee to develop legislation that is fair and sound. My concern is not that any one particular bill passes, but that the issue is responsibly met by the Congress.

On the editorial page of the Washington Post of Sunday, March 20, 1977, was an article by Mr. George F. Will, entitled "DNA-Splicing, AKA Progress." I think the piece is well written and touches many of the most pertinent issues we must face. I ask unanimous consent that the article be printed in the RECORD in order that my colleagues who might not have had a chance to read it may do so.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DNA-SPLICING, AKA PROGRESS

(By George F. Will)

The pace of scientific achievement is accelerating, and government's ability to cope with it is not. Today recombinant DNA research—the recombining of genetic materials to create new forms of life—raises the question posed by the poet Valery: "Can the human mind master what the human mind has made?"

DNA is the material by which heredity is programmed in all living things. Gene-splicing, or "genetic engineering," transplanting selected genes from one organism into another, began less than a decade ago. It is occurring at approximately 100 U.S. locations, and many more worldwide. George Wald, a Nobel Prize winner who opposes such research, calls it, not without reason, "the biggest break with nature that has occurred in human history."

Such research may produce great benefits or injuries, or both. Benefits could include progress against genetic diseases or viral cancer. There could be new forms of life useful in agriculture (a "superwheat," or plants that produce their own fertilizer) and in combating pollution (an organism that "eats" oil spills). Injuries could include the devastation of the planet by new microbes that cause new diseases in people or plants.

Man can now play Creator, but when he begins "engineering" new life he cannot know exactly what his creation will be. He may be inventing a new cure or a new disease. Nevertheless, some scientists feel that it is impudent for government to scrutinize as well as subsidize their enterprises.

But whether, or under what conditions, molecular biologists should intervene in the evolutionary process is, properly, a political, not a biological, question. It involves society's safety and values. Professor Stephen Toulmin, a philosopher of science, says:

"I can think of no prior case in which the actual conduct of experiments in a basic natural science itself directly posed a threat of general public harm. . . . The very heart of the DNA problem is the fact that any 'rogue' agents produced artificially . . . will have the power to multiply themselves and spread throughout the population at large."

Last June, the National Institute of Health issued guidelines governing the DNA research it funds. Researchers have shown responsibility about self-regulation, including a moratorium on certain kinds of projects. But it is reasonable to expect this nation, which has so much to gain or lose from recombinant DNA, to adopt national regulation of it. Without national regulation, there will be a quiltwork of local regulations, including some prohibitions.

Government regulation provokes opposition in the name of "academic freedom" or "the autonomy of science." But civilization will not be dashed on the rocks if some scientific enterprises are regulated to prevent damage—physical or moral—to the community. (Some serious persons argue that various experiments, including some on fetuses, damage society's moral sensibility.) The scientist's crucial freedom is to pursue and publish the truth without restrictions based on narrow ideological reasons.

Unfortunately, chances for calamitous human errors are increasing exponentially: a bright high school student can practice gene-splicing. And biology is not the only source of staggering new problems.

On my desk is a court opinion in an environmental case. It concerns the disposal of waste from nuclear power plants. Of special concern is plutonium, a microscopic particle of which, inhaled, may cause cancer. The half-life of plutonium is 25,000 years and it is not harmless for 250,000 years.

Even the most sophisticated technology for storing plutonium would require some surveillance and maintenance. The court notes, rather drolly, that Neanderthal man appeared "only 75,000 years ago, and that when we talk about a 250,000-year commitment for storing plutonium, "the problems involved are not merely technical, but involve basic philosophical issues concerning man's ability to make commitments which will require stable social structures for unprecedented periods."

Unprecedented? "Institutional arrangements do not exist and never have existed to guarantee the monitoring or attendance upon storage facilities over a millenium." A millenium? That falls 249,000 years short.

Suppose wastes were stored in those salt beds in Lyons, Kansas. Meaning no offense to Lyons, which has been immune to modern turbulence, we must wonder: Can mankind rest assured that it will be immune until 251,976 A.D.? It is enough to make you think progress has gone on too long

AMBASSADOR OF JAPAN SPEAKS IN VIRGINIA

Mr. HARRY F. BYRD, JR. Mr. President, Japan and the United States are friends and allies.

On March 10, 1977, His Excellency Fumihiko Togo, Ambassador of Japan, spoke at the University of Virginia in Charlottesville.

His address is an excellent one, and I ask unanimous consent that it be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS BY HIS EXCELLENCY FUMIHIKO TOGO, AMBASSADOR OF JAPAN

My wife and I are very happy to be with you on this historic campus. We are deeply moved to realize that the first Rector of this University, and the architect of several of its handsome buildings, was also one of the principal architects of American democracy, and one of the truly great Presidents of the United States.

The principles for which Thomas Jefferson stood are honored in Japan, too, as they must be in every land whose people love liberty. The political principles nourished in the Old Dominion for at least three centuries have profoundly influenced the aspirations of peoples throughout the world.

Like the United States, Japan has recently undergone a hard-fought national election, which resulted in a change in national leadership. In just two weeks, our two newly elected heads of government will meet in Washington.

Within another few months, Prime Minister Fukuda and President Carter will join the leaders of other major economic powers, among the industrial democracies, in the third such "summit" meeting in less than two years. At this summit also the common concern will include the harmonization of policies among the leading industrial democracies in such areas as stimulating world economic recovery, promoting price stability, meeting the problems of energy supplies and pricing, and responding constructively to the trade and development problems of the third world.

This is a formidable agenda, demanding untiring efforts, hard negotiations and enlightened leadership. However, it is probably possible to detect some encouraging signs as compared with the general situation a year or two ago.

The disruptive effect of another big jump in world oil prices has been avoided, at least for the present. Hopefully the trend will continue if even a little progress can be made this year toward a just and peaceful settlement in the Middle East. Moving toward this goal would serve the political and economic interests of all nations, including all the Middle Eastern states as well as ourselves.

We have also avoided the threatened confrontation between the industrialized Northern and the developing Southern Hemispheres on problems of the terms of trade and aid, and the issue of "redistribution of world wealth". There are grounds for believing that these issues can be approached, at the summit and throughout the year, with reason instead of emotion.

World economic recovery has not been so strong and steady as we all should like. There has been a pause in the rate of recovery of all the industrial democracies, including the United States and Japan, and the international payments positions of some European countries are still under stress.

Nonetheless, a general economic recovery, led by the United States and supported by Japan and West Germany, is under way. World inflation has not been halted, but it is being contained or reduced in most of the major world-trading economies. And world trade is once again expanding although at some cost in temporary trade imbalances.

The key to our continued progress on all these economic fronts is continuing cooperation among the industrial democracies, who together generate half of all world commerce. The economic policies of each of us affects the prosperity of all of us. Indeed, how well we perform as a highly integrated community of advanced industrial states will profoundly affect the current economic health—and future prosperity—of most of the rest of the world.

This is the setting for next week's meeting in Washington between Mr. Fukuda and Mr. Carter, and for their later meeting at the summit with the leaders of other industrial democracies.

If we have learned anything from our shared economic problems of the past four or five years, it is that the world economy is becoming more and more interdependent; our economic well-being is indivisible. We are also learning, I believe, that, within the world economy, our own community of industrial democracies is an increasingly integrated community. We will prosper, not by restricting our trade with each other, but by consistently promoting free, fair and open trade competition and capital movements within our community.

The trading partnership between our two countries is the largest and most diversified trade between any two overseas partners in history, doubling in value every five years or so. There are occasional problems or disagreements between us that have to be attended to: frictions such as the recent difficult negotiations over offshore fishing, and current complaints about the surge in American imports of color TVs and steel. Yet we have learned to deal with such problems responsibly and without emotion, looking for mutually satisfactory solutions.

On the American side, there is now much wider appreciation of the fact that Japanese competition is no longer based on low wages and cheap prices. In fact, some of the best-known Japanese TV imports—along with Japanese cars, cameras and many other consumer products—actually sell at higher prices than comparable American products. American consumers, in other words, are willing to pay a premium for Japanese quality, design and performance.

On the Japanese side, there is now greater appreciation that it is not always good business to press a competitive advantage too far. Japanese exporters must be sensitive to the impact of any sudden increases in the volume of exports to a particular country. This is especially true in a period of general economic uncertainty and high unemployment throughout the industrialized world.

Both sides have learned one other vital lesson in recent years. This is the fact of our growing interdependence, not only with each other, but also with the rest of the global economy. It is no longer possible for any country, even the richly endowed United States, to go it alone. We all must turn somewhere else for material goods that are essential to our survival—oil, minerals, food and even the advanced technologies which form an increasingly important part of international trade. We need each other's markets, under a free and fair division of international labor. The world economy is rapidly becoming indivisible.

Let me turn to another area where we share vital common interests: the area of maintaining stability and building peace in Pacific Asia.

Japan is the only advanced industrialized democracy in Asia, and we are close treaty allies of the United States. Our alliance is a provocation or threat to no other country.

Within this framework of power balance in the Western Pacific among the United States, China and the Soviet Union, the free nations of Asia can realistically pursue their own independent goals of nation-building and regional development without fear of outside intervention. In my own experience of talking with high officials of Southeast Asian nations, the ASEAN grouping in particular, I find that they share these views and they welcome continuing American participation in Asian affairs for just these reasons.

The Korean Peninsula is still under a divided rule, and no substantial progress toward unification is in sight. It is a challenge to the great powers concerned—the United States, China and the Soviet Union—to encourage a reduction of tension between the North and the South, but in the current circumstances the United States presence there serves as a deterrent against the disruption of the precarious balance on the Peninsula.

We all recognize that national independence in this crowded and interdependent world cannot rest on military power balance alone. Another, equally important aspect of peace-building is the promotion of economic and social development and the expansion of regional economic and political cooperation among Asian Nations. Stable development cannot be imported from the outside, but self-help efforts for development must have outside support if they are to succeed. The ASEAN grouping of Southeast Asian states is an excellent example of a regional association which is already embarked on constructive self-help measures.

By helping to strengthen the structures of Asian interdependence, and by supporting self-help efforts by Asians to earn their own way in the larger world economy, the Japanese people believe that they are also contributing to peace and stability in the Asian-Pacific region.

The greatest vision of Thomas Jefferson, that American freedom and democracy have meaning for all the world's peoples, has never been out of date. Yet it is a long historical struggle to translate that vision into reality. This is because freedom cannot be imposed; it can only be earned. It is a living expression of a people's tolerance of each other, their respect for law, and their willingness to accept personal responsibility for improving their own condition and the common welfare.

The peoples of Japan and the United States have together great tasks to perform in perfecting our own societies, and in helping build a more peaceful and prosperous world for future generations of all nations to inherit.

CENTER FOR COMMUNITY ACTION DESCRIBES INNOVATIVE YOUTH EMPLOYMENT PROGRAM

Mr. HUMPHREY. Mr. President, one of the most innovative and effective jobs programs for young people in the Nation is being run in my own home State of Minnesota. The program is administered by the Center for Community Action, and has been in existence since 1971.

The purpose of the program is to provide Minneapolis, St. Paul, and Hennepin County with worthwhile, quality projects at community and parkland sites by employing and training large numbers of disadvantaged youths 14 to 21 years old during the summer months. Participants in the program learn the use of basic hand tools and construction techniques. They receive training in basic work skills, like how to show up for work on time and how to work with others. Best of all, they have the opportunity to take great pride in the completion of a project of benefit to their own local community. A regular wage provides them with income and a sense of the financial freedom that comes from having a job.

With funding from both the private and public sectors, the Center for Community Action has employed 7,000 disadvantaged youths in Minneapolis, St. Paul, and Hennepin County since 1971.

These young people have made major improvements on public lands in the area, and the beneficiaries are the people who live there. The many projects carried out by the CCA are described in their 1976 annual report.

The kinds of programs now being carried out so well in Minneapolis and St. Paul would be established nationwide under S. 170, the Comprehensive Youth Employment Act of 1977, which I introduced in January along with Senator JAVITS and a number of my colleagues. I am very pleased to see that the President's message to Congress on youth unemployment also envisions setting up community improvement projects which will provide youths with useful and productive work.

The Center for Community Action's program would provide an excellent model for other communities who want to provide their own young people with good jobs on projects that provide a useful community service.

Mr. President, I ask unanimous consent that a letter to me from the Center for Community Action and excerpts from the CCA's annual report be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, follows:

CENTER FOR COMMUNITY ACTION,
Minneapolis, Minn., March 15, 1977.

Senator HUBERT H. HUMPHREY,
Senate Office Building,
Washington, D.C.

DEAR SENATOR HUMPHREY: The Center for Community Action recently received a copy of the Comprehensive Youth Employment Act of 1977 which you and several of your colleagues have submitted for Senate consideration. Members of our staff have studied the text. In our view the course of action outlined in the bill is sound precisely because the youth unemployment problem's true nature and its true scope are recognized. A youth's view of society, of his role in that society, and perhaps, his view of himself is more likely to be determined by his first work experience than by anything he will learn in school. We believe that this is particularly true for disadvantaged youth. For millions of young Americans, our system succeeds or fails here.

We would like to make a few observations on this Youth Employment Act, but will preface our comments by a brief description of who we are and what we have been doing to give you a clearer understanding of our perspective.

The Center for Community Action is a private, non-profit corporation serving the public of Minneapolis, St. Paul and suburban Hennepin County through a variety of summer youth projects. Its service began in 1971 as a result of community dialogue initiated by the Rockfeller Foundation between corporate representatives and area young people. These discussions took place all across the country. Working together, businessmen provided advice and funds, and young people designed and launched programs to solve community problems. One of many national and local programs, only CCA's Riverfront Environmental Effort remains.

Although the riverfront has been the focal point for CCA since 1971, CCA's scope has expanded to include work sites in St. Paul (1972), participation in the Wilderness Work Camp (1972), supervision of a day camp, and administration of the Hennepin County Youth Employment Program (1975), and establishment of the Parklands Project in suburban Hennepin County, neighborhood projects in Minneapolis and St. Paul and sponsorship of the Mixed Blood Theatre (1976). Throughout this growth in program development, CCA's objectives have remained the same. Each summer CCA seeks to provide communities with a worthwhile product by employing and training large numbers of disadvantaged youth from fourteen to twenty-one years of age. Participants in this program learn the use of hand tools, building techniques, make new friends in their work group, and take pride in completing a project of benefit for their community. A regular wage gives the young workers a sense of financial freedom and responsibility as well. Through the combined efforts of the public and private sectors, CCA has employed over six thousand disadvantaged youth during the summer since 1971. The enclosed booklet may give you a better picture of our efforts.

In regard to the provisions of the Comprehensive Youth Employment Act you have proposed, the importance of the "meaningfulness" of the work experience has been stressed. CCA has had experience both in placing youngsters in individual public service job slots, and in "group sites" on environmental projects. The environmental work experience appears to have been more successful in providing youths with that sense of accomplishment and worth of which you have spoken. Both the summers' end evaluations from the youngsters, and those sent in from work supervisors bear this out. Con-

cern for the environment cannot begin too early. We hope that the work projects envisioned by this bill will place some emphasis on community environmental projects.

Part A, Section 705, (3) provides for a detailed description of the jobs to be filled in local communities. While this should help to prevent "make work" positions, CCA has encountered occasional local resistance to defining too closely the specific character of the work to be performed particularly at the outset of the program. Local communities have tended to guage position responsibilities and degrees of supervision to the specific youth referred by us and eventually hired. Such flexibility has warmed the reception accorded our program in Hennepin County.

Part A, Section 704(1)(b) seems to draw an understandable distinction between the unemployed youth to be served and the supervisory personnel administrating the program. One factor contributing to the success of CCA has been a determination not to draw such a line. A natural heirarchy of supervisory levels exists within CCA from "crew chiefs" to "site supervisors" on through coordinators, and program developers to the Director position of CCA. Such a recruiting procedure, while resulting in a fairly high rate of turnover, has insured the selection of people experienced and interested in the success of CCA projects. This approach has provided valuable supervisory and planning experience for scores of young people beyond that normally found in government employment programs. Again such benefits can be derived largely because CCA was founded as a non-profit corporation by young people in cooperation with other elements of the community.

From our association with youth employment programs and the often discouraged and disillusioned youngsters these programs try to serve, the Center for Community Action welcomes this first, comprehensive, national effort on the problems of youth unemployment. The significance of this attack will be far-reaching. The Comprehensive Youth Employment Act of 1977 signals a new appreciation of young people's capacity for meaningful, responsible participation in American society.

Sincerely,

LuVerne Grussing,
Director, Center for Community Action.

1976 Annual Report—CCA

INTRODUCTION

The Center for Community Action is a private, non-profit corporation serving the public of Minneapolis, St. Paul, and Hennepin County through a variety of summer youth projects. Its service began in 1971 as a result of community dialogue initiated by the Rockefeller Foundation between corporate representatives and area young people. These discussions took place in cities all across the country. Working together, businessmen provided advice and funds and young people designed and launched programs to solve community problems. Of the many national and local programs, only CCA's Riverfront Environmental Effort remains.

Although the Riverfront has been the focal point for CCA since 1971, CCA's vision has enlarged to include work sites in St. Paul (1972); participation in the Wilderness Work Camp (1973); supervision of the Day Camp and administration of the Hennepin County Summer Youth Employment Program (1975); and establishment of the Parklands Project in suburban Hennepin County, neighborhood projects in Minneapolis and St. Paul and sponsorsihp of the Mixed Blood Theatre Company (1976). Throughout this tremendous growth in program development CCA's objectives have been the same.

Each summer CCA's goal is to provide communities with a worthwhile quality product by employing and training large numbers of disadvantaged youth age 14 to 21. Participants in the program learn use of hand tools, building techniques, make new friends in their work groups, and take pride in completing a project of benefit to their community. A regular wage gives the young workers a sense of financial freedom as well. Through the combined efforts of the public and private sectors, CCA has employed 7000 disadvantaged youth during the summers since 1971.

This Report is an opportunity for you to examine the results of their labor.

THE RIVERFRONT

In 1971 the Riverfront reclamation work began at Father Hennepin Bluffs located east of St. Anthony Falls. This rugged area had long been used as a dumping ground until 90 young workers transformed it into a beautiful recreation area. Over the years, trails have been dug and improved, railroad tie bridges and staircases built, picnic tables added, and scenic overlooks constructed. Grass seed and flowers have been planted along with hundreds of trees, including ash, maple, white and Norway pine. Father Hennepin Bluffs became the model for all other CCA park development projects undertaken.

Select urban land reclamation projects along both sides of the Mississippi River continue under CCA's direction. All lands reclaimed are public and have suffered severe abuse or neglect. Young men and women are recruited in their schools by the Neighborhood Youth Corps coordinators. Workers earn the minimum wage for approximately twenty hours of work per week throughout the ten week summer program. Progress on the sites is maintained by a site supervisor and several crew chiefs. It is their responsibility to obtain materials and teach their crews how to handle tools to build the site. The intense and difficult labor of the students returns ill-used lands to the public trust.

Without substantial financial and material gifts from the business community, the Riverfront could not survive. Young people seeking work and corporate officials looking for worthy projects to aid continue to meet through CCA to produce superior park and recreation sites along and near the Mississippi River for the public's enjoyment. As in past years, various departments and city officials assisted CCA in planning and executing the six Minneapolis and three St. Paul sites which made up the 1976 Riverfront program.

MINNEAPOLIS SITES

Father Hennepin Bluffs

For the sixth summer, Father Hennepin Bluffs was improved by CCA work crews. Working closely with the Minneapolis Planning Department, CCA carried out their plans for further development of this well known park area. In addition to de-trashing and general spring time maintenance, crews built 4 staircases, an observation pad, 3 retaining walls, 2 decks, and extended the trail system.

Over the years, expanding reclamation work done at Father Hennepin Bluffs has kept the park in the public domain. There are now four main sections of the park: Nicollet Island, Main Street, Lower and Upper Bluffs. Public attention has turned back to the Mississippi River, the most exciting natural asset in the metropolitan area. This park figures heavily in Minneapolis Parks and Recreation Board plans for the urban river corridor.

Lake Street

Working south from Lake Street, four crews built a half mile of new trail into the river bluffs. The trail was cut into the hills and then lined with retaining walls. In addition, 3 railroad tie stairs, a marsh bridge, and a 20 feet long bridge were constructed. The upper area of the path was smoothed with woodchips. Future plans call for an extensive cross country ski trail and new walking path along the bluffs from Lake Street south to Minnehaha.

Theodore Wirth Park

Four crews worked on the large neglected western section of Theodore Wirth Park. This area, long a favorite of cross country skiers, has 200 yards of new trail and a cross country switch-back built with winter lovers in mind. Crews also built a picnic area with 2 tables, 7 benches along the trail, and a stairway up to a covered deck overlooking the lake beach. Another set of stairs and 4 retaining walls were constructed to improve access to the beach. Portions of this park have unusual prairie plants. Youths removed encroaching thistles and woody plants to retain the natural prairie plant life.

Kasota

To attract new industry, the Minneapolis Industrial Commission is developing this land. Bridleveil Creek flows through the area and plans called for making a central park area along the creek. CCA crews completed a 6 feet wide path lined with railroad ties and groomed with woodchips around the pond, 4 sets of stairways, a bench, and a viewing platform near the pond.

Fort Snelling State Park

Working closely with the Minnesota Department of Natural Resources, two crews created a new picnic area by clearing this historic area of 5 acres of junk on Picnic Island. It was ready for public enjoyment by July 4. Work continued on Pike Island. Here crews constructed a fence from sawed-off telephone poles and painstakingly built a set of limestone stairs 8 feet wide.

Bassett's Creek

Tremendous improvement in this area resulted from the diligent work of two crews. The park is located at the mouth of the creek named for Joel Bassett whose sawmill stood there in the nineteenth century. The crews established a camp site with a cobblestone fireplace; finished stairs down to the beach; inlaid the Plymouth Avenue stairs with flagstone; linked stairs by trails and graveled the trails; built 4 benches along the creek; and stained and replanked the bridge over Bassett's Creek.

ST. PAUL SITES

Battle Creek Park

For years, St. Paul residents have used these picnic grounds during the summers. In 1975, the original WPA stonework lining the creek bed suffered severe flood damage. CCA crews have worked for two years to reopen the park. This year, four crews finished 2 walls, one 55 feet long and the other 75 feet in length and each was 4 feet high. Stones were hauled from the Hidden Falls area. The youth mixed the concrete for the foundation. Then the stones were carefully fitted together and secured with re-rod and more concrete. In addition, crews de-trashed the park and filled in washed-out portions of the baseball field.

Lilydale

Future plans for this area call for a flood plain park. The most difficult and tedious task of the summer was the de-trashing effort. Youth attacked trash 3 and 4 feet deep, carried it out, and piled it up to be hauled away. The remainder of the summer was spent in taking down and debarking trees afflicted with Dutch Elm disease.

Swede Hollow

This lovely bowl-like area off Payne Avenue was used many years as a dumping ground. Originally, this area contained the homesteads of the city's first Swedish immigrants and the foundations of their homes are still visible. Beginning in 1974, CCA crews have

worked to reclaim this park. Four crews improved access to the area and upgraded the trail encircling the park. They completed an amphitheater with cobblestones and concrete, cleaned and filled two swamps, finished a plank bridge and constructed a concrete retaining wall.

HENNEPIN COUNTY SUMMER YOUTH EMPLOYMENT

For the second year, CCA was awarded the contract to administer the Hennepin County Summer Youth Employment Program by the Hennepin County Board of Commissioners. The overall purpose of the program was to develop group site and individual placement jobs throughout the county for disadvantaged young people between the ages of 14 and 21. To accomplish this goal CCA received an administrative grant of $600,000 from the Minnesota Urban Comprehensive Employment and Training Consortium and the State of Minnesota Youth Employment Program.

Recruitment was conducted by CCA staff in May through contacts with school counselors, notification of the Welfare Department, public notices on radio and in suburban newspapers, and personal calls to last year's participants. Over 2000 applications for employment were received at CCA's field office in St. Louis Park. Of these, 1024 eligible youth were placed. Eligibility was determined by using Department of Labor poverty guidelines.

The youth worked approximately twenty to thirty hours per week for ten weeks and earned $2.30 per hour. Those age 14–15 could work a maximum of 200 hours earning up to $460 over the summer and youth age 16–21 were allowed a maximum of 300 hours amounting to $690 for the summer. Half the youth in the program worked in jobs developed by their own municipality while the other half worked on jobs created through CCA's Parklands Project.

INDIVIDUAL PLACEMENTS

Community officials determined to a large degree the goals of the jobs, the quality of the work, and the type of skills to be learned. Municipalities were responsible for interviewing, hiring, and supervising the youth. In cooperation with the Minnesota Department of Employment Services, CCA was responsible for recruiting, certifying, referring, and paying the eligible youth in the program.

Some of the jobs developed by the municipalities with the help of CCA included recreation aides, swimming instructors, building maintenance aides, park crew workers, traffic counters, bicycle patrols, hydrant painters, secretaries, library aides, child care assistants, actors, and puppeteers to name only a few.

The majority of youth hired were in the 16–21 age group. Their work schedules and duties were arranged by their immediate employers. For many of the youth, this was their first work experience in which they were expected to be on time, work a full day all week, and perform responsibly. Meeting these expectations proved to be a successful experience for most of the participants.

PARKLANDS

The innovative Parklands Project was a very successful effort to involve municipal officials in the group site park development planning process. CCA's program developer contacted representatives of 45 municipalities to determine their specific park and recreation needs. These needs were assessed in terms of benefits to the community and the capabilities of young workers.

Throughout the working stage of the program, CCA staff sought advice and suggestions from municipal officials, park and recreation departments, civic groups, and the Department of Natural Resources. These suggestions and needs were coupled with the knowledge and expertise gained from years of experience with the Riverfront.

Early and continued contacts with suburban advisors proved invaluable over the summer. Not only were 12 suburban sites created and completed by young people but city officials were introduced to and pleasantly surprised by the dedication and quality of youth labor in municipal park development. Most of the youth involved in group site work were 14 and 15 years old.

Work at the group sites was supervised by site supervisors and crew chiefs. They were responsible for training the crew members in proper use of hand tools, construction techniques, and work site safety. Most importantly, the young workers maintained a high level of enthusiasm and produced superb parks for their cities. Many of the youth expressed pride in the permanence, usefulness, and beauty of their work.

Golden Valley—Pennsylvania Woods

An undeveloped 20 acre plot adjacent to a senior citizens' home and low income housing is now a lovely recreation area. To make way for trail construction, fallen trees were dragged out and underbrush cleared away. After the trail was built through the area and around the pond, it was smoothed with woodchips and packed with crushed limestone for easier wheelchair access. Using scrap lumber, railroad ties, and hand tools, the workers built picnic tables and benches. A portable bridge was secured linking the trail to the grounds of the senior citizen's home. Two retaining walls were also built. All members of the work crews lived within walking or biking distance which made this a truly neighborhood project.

HENNEPIN COUNTY SITES

Bassett's Creek

Both sides of a half mile stretch of Bassett's Creek in Golden Valley were cleaned and groomed by CCA crews. Dead trees and shrubs were removed along the banks. Erosion control work was done to prevent further destruction of the slopes.

Rice Lake

After completing the Bassett's Creek project, crews moved to this third site in Golden Valley. Here they built a floating marsh bridge supported by styrofoam pilings. In addition, they built a look-out platform and packed the trail with gravel.

New Hope—Dorothy Mary

The Environmental Sciences Foundation had already developed this 6½ acre park and set the completion date for 1980. Various community groups had finished a number of the initial construction projects. CCA crews detrashed the park by removing debris, tree stumps and fallen trees, spread trails with woodchips, planted shrubs, improved the banks of the pond to prevent further erosion, and destroyed trees with Dutch Elm disease.

Maple Grove—Fish Lake

After finishing their work at Dorothy Mary Park in five weeks, crews moved to this site in Maple Grove. The city purchased this pine tree wooded 5 acre plot to be developed into a park. Crews dug paths and lined them with woodchips. A series of steps were built into the trail. Brush was cleared away and a parking area was leveled for the city to blacktop. CCA crews assisted city workers in building a boat dock to improve access to the park. Their assistance to Maple Grove workers helped develop good community relations.

Brooklyn Center—Environmental Preserve

This 47 acre park is located near the Crystal air strip and was almost inaccessible to the public before this summer. Vegetation in this marshy area forms a cathedral arch over the 1200 feet of path dug and paved with woodchips by CCA work crews. The most spectacular project was a 350 foot long marsh bridge built out of telephone poles and railroad ties and supported by sand box pilings. Two other bridges, 15 and 25 feet in length, were also built to completely open the area for nature study.

Eden Prairie—Round Lake

In the three remaining weeks of the summer crews which had finished other projects worked at Round Lake in Eden Prairie. Crews cut through underbrush to build a perimeter trail. Loads of woodchips were hauled in by wheelbarrow to groom the new trail.

Edina—Bredesen Park-Lake Cornelia

During the final two weeks of the program, two crews worked on this site in Edina. Using post-hole diggers, the crew members dug holes, set the fence posts, and secured a chain link fence along the perimeter trail. They also constructed a set of railroad tie stairs.

St. Louis Park

Four small sites were developed by CCA and the St. Louis Park Board of Parks and Recreation. The same groups of workers rotated among these sites and completed the work over the ten week period.

Ford Park

Youth cleared away springtime debris, dug a section of new trail, groomed the trail with woodchips, and constructed two foot bridges.

Minnehaha Creek

Piles of junk were cleared away and two sections of the creek were rip-rapped.

Bass Lake

The lake shore was overgrown with thick underbrush. Crews cleared away brush and trash and trimmed the larger trees.

Westwood Hills Environmental Education Center

Crews de-trashed the grounds and removed rocks.

Richfield—Taft Park

In spite of the terrible heat, tremendous progress was seen at this nearly treeless site in Richfield.

Digging a lake-side perimeter path was the main task. A trail 2000 feet in length was cut into the terrain and lined with telephone poles set into the soil. Then the path was packed with gravel for bicycle travel. The pedestrian path was completed with 7 sets of steps and 3 bridges, each 10 feet long. Crews also groomed a ball park with gravel. Before the summer's end, several young trees were planted to provide shady relief in future summers.

Woodlake

Crews worked at a second Richfield site, Woodlake Nature Center. Youth began an extensive de-trashing effort and trail improvement project. Wheelbarrows filled with gravel were pushed into the swamp to groom the 6 foot wide trail. This trail is now suitably packed for vehicle transport. The area around the ice arena and pool was landscaped with bushes, grass seed, and gravel.

Luce Line Trail

The Department of Natural Resources owns the right of way to this old Chicago Northwestern railroad line near Gleason Lake in Plymouth. DNR plans call for development of 104 miles of hiking, biking, and equestrian trails. Last year CCA crews worked on 14 miles of hiking and biking trails and this year began work on the equestrian path. Crews hacked through thick underbrush, including potent poison ivy and were plagued by wasps all along the trail. In spite of the hazards, their dedicated efforts resulted in a clean-cut, well-groomed equestrian trail.

Morris T. Baker

During the first year of the program 11,000 young trees were planted at the CCA con-

tainerized at Morris T. Baker Park Reserve. Young workers practiced good nursery skills by fertilizing, watering, and pruning the tree stock. This year, crews did spring inventory and calculated winter kill losses. The trees were then divided: some were moved to a new nursery at Crow-Hassan Park Reserve, others were planted at the South High Community Center by the Jaycees and the Shade Tree Task Force, and the remaining ⅓ was delivered to the Metropolitan Waste Control Commission.

Maple Plain

The city of Maple Plain had begun developing a park four years ago. After completing their work at Morris T. Baker, crews built 2600 feet of hard packed pedestrian and bicycle trail at this park in Maple Plain. They dug a playground and built a mountain of tires for climbing. Workers also leveled a parking lot and groomed 2 baseball diamonds. Almost 20 truckloads of crushed limestone were delivered to groom the trail around the park. A one acre wood lot was cleared and picnic tables were set up. This basically grassy plot was turned into a useful recreation site.

Bloomington, Japanese Tree Garden

Ten years ago Bloomington's Affiliated Garden Clubs commissioned a Japanese landscape architect to design an authentic ornamental Japanese tree garden for the city. The 2 acre site adjacent to Normandale Community College was nearly complete except for the landscaping. Young workers finished the remaining landscaping in time for the July 18 dedication. The meticulous nature of a Japanese garden called for especially careful work. Crews spread 150 tons of white rock along 1200 feet of newly leveled path. After raking the gravel to uniform smoothness, the crews planted 200 trees and one acre of sod. Laying the sod involved moulding the soil, placing decorative rocks, and putting the sod down by hand. Two sets of stairs were also constructed.

DAY CAMP

Last year CCA instituted a special day camp for children ages 5 through 9 and placed a strong emphasis on swimming instruction. For the second summer, the CCA-sponsored day camp gave children from north, northeast, and suburban Minneapolis a chance to have fun and hopefully better understand children of various cultural, social, and economic backgrounds. This year, the day camp worked with the Minneapolis Public School Community Education elementary school education-recreation program.

One hundred children ranging in age from 5 to 9 enrolled in the program and participated in recreation activities such as swimming, music, sports, arts and crafts, dance and drama. Educational games were used to help children in reading, writing, and math skills. Several field trips were taken including visits to Como Park Zoo, Children's Theatre, Peppermint Tent Theatre, and Betty Crocker Kitchens.

The campers were supervised in their activities by young adults employed through the NYC program to learn child care skills. In addition, the older youth toured several metropolitan colleges including the University of Minnesota, Hamline, Macalester, St. Thomas, St. Catherine's, and Augsburg and had an opportunity to learn about application requirements, academic and athletic programs, and financial aid. The children had a safe, educational, and enjoyable summer and the older youth had a valuable paid work experience.

NEIGHBORHOOD PROJECTS

This year CCA began the Neighborhood Project in an effort to locate and solve problems in our own backyards. Crews in Minneapolis and St. Paul worked to improve and beautify their neighborhoods by constructing garbage can racks and painting urban wall murals.

A common complaint among urban neighborhoods has been that dog packs roam through alleys spilling garbage. The mess is both unsightly and unhealthy. In Minneapolis, the Whittier community requested CCA's help in solving this problem. Work crews, following city rack code specifications, constructed, painted, and delivered 80 racks on order to residents in the neighborhood. In St. Paul, crews in the Summit-University and Hamline-Lexington neighborhoods worked to clean up the alleys and then built garbage can racks mounted on cobblestone bases.

The racks hold up to three cans. Youth in both cities learned precision carpentry skills to meet the detailed city rack codes. By delivering the finished products they developed rapport with neighborhood residents.

Minneapolis crews also worked painting murals on two of three walls in the design-painting contest "Trio". Crews worked safely on scaffolding 20 and 30 feet high and had to clean and prime the building walls before painting the artist's design. The Dayton-Hudson Foundation gave prize money in the contest sponsored by Whittier Community, Minneapolis Arts Commission, and Minneapolis Planning Department. Harris McDonald, a well known local artist, was the winner. The third and final wall of his design should be completed next summer.

WILDERNESS WORK CAMP

The Wilderness Work Camp located on the St. Croix River near Rush City is sponsored through the cooperative efforts of the Center for Community Action, the Minneapolis Neighborhood Youth Corps, the St. Paul Summer Youth Employment Program, and Northern States Power Company. The camping experience allows the youth to continue earning money for trail work done at the camp while giving them a vacation away from home.

This year, 222 campers from Minneapolis, St. Paul, and Hennepin county group sites attended camp sessions which last eight days. Recreational activities included a three day canoe trip on the St. Croix, overnight backpacking trips, as well as swimming, fishing, sports, and arts and crafts. New activities this summer included a roller skating trip, hayrides, and nature study in nearby wildlife areas.

In order to earn their regular wage, campers spent a day or two each session working on a ten mile section of trail on the Minnesota side of the St. Croix River. This section of trail joined a section of trail completed last summer to form a 20 mile stretch of hiking path. The Minnesota Department of Natural Resources is developing an extensive corridor trail along the banks of the river.

BRIDGES AND STAIRCASES

Out of this first experience in youth employment emerged a distinctive style of construction. Young workers successfully used scrounged materials—brick, concrete, telephone poles, railroad ties—and hand tools—shovels, picks, hammers, wheelbarrows—to produce sturdy, rustic, and useful as well as decorative recreation spots. Today the railroad tie bridge and staircase are the hallmarks of CCA labor.

CCA crews have built several kinds of sophisticated bridge structures. Successful bridge construction ranges from the relatively simple foot bridge to the steel truss bridge. This year crews built floating marsh bridges using boxes filled with sand and styrofoam blocks for support.

Railroad tie staircases appear simpler than they are. Crews begin at the bottom of the slope digging supports into the hill, being sure to curve the staircase with the hill. Each step is then secured in place by drilling with a hand drill through the tie and threading cement re-rod in to strengthen it.

MIXED BLOOD THEATRE COMPANY

The Center for Community Action's multiracial theater company made strong human statements through its five productions. The 24 actors and actresses ranged in age from 17 to 36 and the racial make-up of the company was 11 Black, 6 Native American, and 7 White. They played roles in which they could draw from their own personal experiences more easily than in conventional school or summer stock choices. The company members were paid through the Neighborhood Youth Corps and Urban Corps programs.

In an attempt to draw an audience that might not normally go to the theater, Mixed Blood provided child care during the performances, transportation to and from the theater from central locations in the inner city, charged only $1.00 for anyone on public assistance, and one performance of each production was on a pay-what-you-can basis.

The productions

"Dutchman," by Imamu Amiri Bakara.
"Black Cycle," by Martie Charles.
"Status Quo Vadis," by Donald Driver.
"Brother Champ," by Michael Kassin.
"Indians," by Arthur Kopit.

PLUTONIUM PROS AND CONS

Mr. HART. Mr. President, on Monday, March 21, the Ford Foundation released a comprehensive study of nuclear power issues. In the belief that this study should be seriously considered by the Congress, I asked that the overview section of that report be printed in the CONGRESSIONAL RECORD. It appears in the Monday, March 21, 1977, RECORD on page 8295.

Mr. President, today the Washington Post printed an editorial describing the report as "remarkable for its intelligence and balance." I fully support the Post's characterization of the foundation's report and, for my colleagues' consideration, ask unanimous consent that the full text of the Post editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JUDGMENT ON PLUTONIUM

The case for plutonium fuel and the breeder reactor has been growing steadily more dubious. With each re-examination, the risks become clearer and the benefits dimmer. The latest analysis, published this week by a research organization called the Mitre Corporation, is remarkable for its intelligence and balance. It deserves to be considered authoritative. It strongly urges the Carter administration to postpone plutonium fuel production "indefinitely" and to relegate the breeder technology to the laboratory as a standby for the middle of the next century. That judgment is unquestionably the right one.

The penalties for a mistake here would be monstrous. Plutonium is one of the most potent poisons ever devised and, in its fuel form, it can be fashioned into nuclear weapons relatively easily.

The technology is within the capacity of terrorist organizations as well as national governments of every kind. Putting the stuff into commercial use would be an irreversible decision.

Yet that is the direction in which U.S. policy has been heading, guided mainly by ob-

solete assumptions and blind momentum. A reprocessing plant for the manufacture of plutonium now stands, two-thirds completed, near the town of Barnwell, S.C., waiting for a federal policy on subsidies. A breeder reactor is under construction at Clinch River, Tenn., scheduled to go into operation in the early 1980s as a prototype for commercial plutonium-fueled reactors in the 1990s. The Mitre report is addressed primarily to President Carter and his energy advisers. If they follow its clear and foreceful logic, they will abandon both of these projects.

The Mitre report is the work of a committee of 21 men who, collectively, know as much about these questions as anyone in the world. One member of the committee, Harold Brown, was president of the California Institute of Technology and is now Secretary of Defense. Another, Kenneth Arrow of Harvard, holds the Nobel Prize in economics. A third, Wolfgang Panofsky, is director of the Stanford Linear Accelerator Center. There's no need to run through the entire list. Their report has been published as a book, incidentally, by the Ballinger Co., under the title, "Nuclear Power Issues and Choices." But it covers a great deal more than nuclear issues alone—because, to get to the plutonium question, you first have to consider the future American economy, its requirements for energy and the various possible sources.

The nuclear reactors now being built by utilities around the country are fundamentally different from the plutonium breeder—and far less dangerous. The present commercial reactors are fueled with rods of uranium; when the fuel is spent, the fission process has left a residue of plutonium in the rod. But in that form, it's not explosive. It's the next step that takes the country over a new threshold—the reprocessing procedure that refines the plutonium and mixes it into a new kind of fuel for the breeder, which, in turn, produces more plutonium than it consumes. It's this second fuel, the one that emerges from the reprocessing plant, that contains weapons-grade plutonium and presents truly extraordinary dangers.

The only conceivable reasons for resorting to the plutonium technology now would be either a looming shortage of uranium or the threat of energy prices so high that they could derail the nation's economic growth.

Plutonium recycling can be postponed indefinitely "at essentially no economic cost," the report finds. "The fears that energy scarcity will force fundamental changes in economic and social structures or the lifestyle of the industrialized world are not well founded."

The Mitre group, in other words, considered both possibilities and concluded that there was nothing to justify risking, in this century, the dire hazards of reliance on plutonium fuels.

PRESIDENT CARTER AT THE UNITED NATIONS

Mr. HUMPHREY. Mr. President, last week, President Carter delivered a highly important speech at the United Nations, signalling a fresh and most welcome shift in U.S. policy toward that vital institution.

The President has rightly placed this Nation's foreign policy in its proper context—that of leadership in addressing a multitude of political, social, economic, and human problems of the globe. He has approached these problems by taking the offensive, in a positive manner, as compared to the rather nascent approach we exercised in the recent past.

As the President noted:

We are proud that, for the 32 years since its creation, the United Nations has met on American soil. And we share with you the commitments to freedom, self-government, human dignity, mutual toleration and peaceful resolution of disputes which the founding principles of the United Nations and Secretary General Kurt Waldheim so well represent.

The President then effectively articulated a broad range of foreign policy concerns which will characterize his administration. These include the need to bring the staggering arms race under control; the need for a settlement in the Middle East; the need to defuse racial conflict which threatens all of Southern Africa; the need to build a better and more cooperative international economic system which is more equitable and responsive to the needs of the less developed nations; and the need to work with all nations of the world in advancing the cause of human rights.

The President is to be commended for his far-sighted approach to these difficult and complex global issues. His concerns are deserving of the support and cooperation of the Congress and the American people. He brings out the best of our traditional values as a nation. I pledge my support to the President and will work in close cooperation with him as we strive to achieve these ambitions, yet most worthwhile goals.

Mr. President, I ask unanimous consent that the President's speech be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

TEXT OF PRESIDENT'S ADDRESS AT U.N. ON PEACE, ECONOMY AND HUMAN RIGHTS

UNITED NATIONS, N.Y., March 17.—Following is the text of President Carter's address here tonight, as made available by the United States Mission to the United Nations:

I am proud to be with you tonight in this house where the shared hopes of mankind can find a voice.

I have come here to express my own support, and the continuing support of my country, for the ideals of the United Nations.

We are proud that, for the 32 years since its creation, the United Nations has met on American soil. And we share with you the commitments to freedom, self-government, human dignity, mutual toleration and peaceful resolution of disputes which the founding principles of the United Nations and Secretary General Kurt Waldheim so well represent.

No one nation can by itself build a world which reflects these values. But the United States has a reservoir of strength—economic strength, which we are willing to share; military strength, which we hope never again to have to use, and the strength of ideals, which we are determined fully to maintain as the backbone of our foreign policy.

It is now eight weeks since I became President. I have brought to office a firm commitment to a more open foreign policy. I believe that the American people expect me to speak frankly about the policies we intend to pursue and it is in that spirit that I speak to you tonight about our hopes for the future.

I see a hopeful world, a world dominated by increasing demands for basic freedoms, for fundamental rights, for higher standards of human existence. We are eager to take part in the shaping of this world.

"PERSISTING DANGERS"

But in seeking such a better world, we are not blind to the reality of disagreement nor to the persisting dangers that confront us. Every headline reminds us of bitter divisions, of national hostilities, of territorial conflicts, of ideological competition. In the Middle East peace is a quarter of a century overdue. A gathering racial conflict threatens Southern Africa, new tensions are rising in the horn of Africa; disputes in the eastern Mediterranean remain to be resolved.

Perhaps even more ominous is the staggering arms race. The Soviet Union and the United States have accumulated thousands of nuclear weapons. Our two nations have almost five times as many missile warheads today as we had eight years ago. Yet we are not five times more secure! On the contrary, the arms race has only increased the risk of conflict.

We can only improve this world if we are realistic about its complexities. The disagreement we face are deeply rooted, and they often raise difficult philosophical as well as practical issues. They will not be solved easily nor quickly. The arms race is now imbedded in the fabric of international affairs and can only be contained with the greatest of difficulty. Poverty and inequality are of such monumental scope that it will take decades of deliberate and determined effort even to improve the situation.

I stress these dangers and these difficulties because I want all of us to dedicate ourselves to a prolonged and persistent effort designed

To maintain peace and to reduce the arms race.

To help build a better and more cooperative international economic system.

To work with potential adversaries as well as with our friends to advance the cause of human rights.

UNITED STATES CANNOT SOLVE ALL PROBLEMS

In seeking these goals, I recognize that the United States cannot solve the problems of the world. We can sometimes help others resolve their differences, but we cannot do so by imposing our own particular solutions.

In the coming months there is important work for all of us in advancing international cooperation and economic porgress in the cause of peace.

Later this spring the leaders of several industrial nations of Europe, North America, and Japan will confer at a Summit meeting in London on a broad range of issues. We must promote the health of our industrial economies, seek to restrain inflation and begin to find ways of managing our domestic economies for the benefit of the global economy.

We must move forward with the multilateral trade negotiations in Geneva.

The United States will support the efforts of our friends to strengthen democratic institutions in Europe, particularly in Portugal and Spain.

We will work closely with our European friends on the forthcoming Review Conference on Security and Cooperation in Europe. We want to make certain that all provisions of the Helsinki agreement are fully implemented and that progress is made in further East-West cooperation.

In the Middle East we are doing our best to clarify areas of agreement, to surface underlying consensus, and to help develop mutually acceptable principles which can form a flexible framework for a just and permanent settlement.

In Southern Africa we will work to help attain majority rule through peaceful means. We believe that such fundamental transformation can be achieved, to the advantge of both blacks and whites. Anything less than that may bring a protracted racial war, with devastating consequences for all. This week

the government of the United States took action to bring our country into full compliance with United Nations sanctions against the illegal regime in Rhodesia.

We will put our relations with Latin America on a more constructive footing, recognizing the global character of the region's problems. We are also working to resolve in amicable negotiations the future of the Panama Canal.

RELATIONS WITH LATIN AMERICA

We will continue our efforts to develop further our relationship with the People's Republic of China. We recognize our parallel strategic interests in maintaining stability in Asia and will act in the spirit of the Shanghai communique.

In Southeast Asia and the Pacific we will strengthen our association with our traditional friends and seek to improve relations with our former adversaries.

Throughout the world, we are ready to normalize our relations and seek reconciliation with all states which are ready to work with us in promoting global progress.

Above all, the search for peace requires a much more deliberate effort to contain the global arms race. Let me speak in this context first of the U.S.-Soviet relationship, and then of the wider need to contain the proliferation of arms throughout the global community.

I intend to pursue the strategic arms limitation talks between the United States and the Soviet Union with determination and with energy. SALT is extraordinarily complicated, But the basic fact is that while the negotiations remain deadlocked the arms race goes on, the security of both countries and the entire world is threatened. My preference would be for strict controls or even a freeze on new types and new generations of weaponry, with a deep reduction in the strategic arms of both sides. Such a major step towards not only arms limitations but arms reductions would be welcomed by mankind as a giant step towards peace.

Alternatively, and perhaps more easily, we could conclude a more limited agreement based on those elements of the Vladivostok accord on which we can find consensus, and set aside for prompt consideration and subsequent negotiations the more contentious issues and also the deeper reductions that I favor.

"TOTAL CESSATION OF TESTING"

We will also explore the possibility of a total cessation of nuclear testing. While our ultimate goal is for all nuclear powers to end testing, we do not regard this as a prerequisite for suspension of tests by the two principal nuclear powers. We should, however, also pursue a broad and permanent multilateral agreement on this issue.

We will also seek to establish Soviet willingness to reach agreement with us on mutual military restraint in the Indian Ocean, as well as on such matters as arms exports to troubled areas of the world.

In proposing such accommodations I remain fully aware that American-Soviet relations will continue to be highly competitive, but I believe that our competition must be balanced by cooperation in preserving peace, and thus our mutual survival. I will seek such cooperation earnestly and sincerely.

However, the effort to contain the arms race is not a matter just for the United States and the Soviet Union alone. There must be a wider effort to reduce the flow of weapons to all the troubled spots of this globe. Accordingly, we will try to reach broader agreements among producer and consumer nations to limit the export of conventional arms, and we will take initiatives of our own since the United States has become one of the major arms suppliers of the world.

We are deeply committed to halting the proliferation of nuclear weapons among the nations of the world. We will undertake a new effort to reach multilateral agreements designed to provide legitimate supplies of nuclear fuels while controlling poisonous and dangerous atomic wastes.

Working with other nations represented here, we hope thus to advance the cause of peace. We will make a strong and positive contribution to the upcoming special session on disarmament.

"THE SEARCH FOR JUSTICE"

But the search for peace also means the search for justice. One of the greatest challenges before us as a nation, and therefore one of our greatest opportunities, is to participate in molding a global economic system which will bring greater prosperity to the people of all countries.

I come from a part of the United States which is largely agrarian and which for many years did not have the advantages of adequate transportation, capital, management skills, education, which were available in the industrial states of our country. So I can sympathize with the leaders of the developing nations, and I want them to know that we will do our part.

To this end the United States will be advancing proposals aimed at meeting the basic human needs of the developing world and helping them to increase their productive capacity. I have asked Congress to provide $7.5 billion of foreign assistance in the coming year, and I will work to insure sustained American assistance as the process of global economic development continues. I am also urging the Congress to increase our contributions to the United Nations Development Program and meet in full our pledges to multilateral lending institutions, especially the International Development Association of the World Bank.

We remain committed to an open international trading system, one which does not ignore domestic concerns in the United States. We have extended duty-free treatment to many products from the developing countries. In the multilateral trade negotiations in Geneva we have offered substantial trade concessions on goods of primary interest to developing countries. In accordance with the Tokyo declaration, we are also examining ways to provide additional consideration for the special needs of developing countries.

The United States is willing to consider, with a positive and open attitude, the negotiation of agreements to stabilize commodity prices, including the establishment of a common funding arrangement for financing buffer stocks where they are a part of individual negotiated agreements.

WIDER ROLE FOR THIRD WORLD

I also believe that the developing countries must acquire fuller participation in the global economic decisionmaking process. Some progress has been made in this regard by expanding participation of developing countries in the International Monetary Fund.

We must use our collective natural resources wisely and constructively. Today our oceans are being plundered and defiled. With a renewed spirit of cooperation and hope we join in the Conference of the Law of the Sea in order to correct the mistakes of past generations and to insure that all nations can share the bounties of the eternal seas.

We must also recognize that the world is facing serious shortages of energy. This is a truly global problem. For our part, we are determined to reduce waste and to work with others towards a proper sharing of the benefits and costs of energy resources.

The search for peace and justice means also respect for human dignity. All the signatories of the U.N. Charter have pledged themselves to observe and respect basic human rights. Thus, no member of the United Nations can claim that mistreatment of its citizens is solely its own business. Equally, no member can avoid its responsibilities to review and to speak when torture or unwarranted deprivation of freedom occurs in any part of the world.

The basic thrust of human affairs points toward a more universal demand for fundamental human rights. The United States has a historical birthright to be associated with this process.

We in the United States accept this responsibility in the fullest and most constructive sense. Ours is a commitment, not just a political posture. I know perhaps as well as anyone that our ideals in the area of human rights have not always been attained in the United States, but the American people have an abiding commitment to the full realization of these ideals. We are determined therefore, to deal with our deficiencies quickly and openly.

ACTION ON U.N. COVENANTS

To demonstrate this commitment I will seek Congressional approval and sign the U.N. covenants on economic, social and cultural rights, and the covenant on civil and political rights. I will work closely with our Congress in seeking its support to ratify not only these two instruments, but the United Nations Genocide Convention and the Treaty for the Elimination of All Forms of Racial Discrimination as well. I have just removed the last remaining restrictions to American travel abroad and will move to liberalize travel opportunities to America.

The United Nations is the global forum dedicated to peace and well-being of every individual—no matter how weak or how poor. But we have allowed its human-rights machinery to be ignored and sometimes politicized. There is much that can be done to strengthen it.

The Human Rights Commission should be prepared to meet more often, and all nations should be prepared to offer it their fullest cooperation—to welcome its investigations, to work with its officials, to act on its reports.

I would like to see the entire U.N. Human Rights Division moved back here to the central headquarters, where its activities will be in the forefront of our attention and where the attention of the press corps can stimulate us to deal honestly with this sensitive issue. The proposal made 12 years ago by the Government of Costa Rica—to establish a U.N. High Commissioner for Human Rights—also deserves our renewed attention and support.

Strengthened international machinery will help us all to close the gap between promise and performance in protecting human rights. When gross or widespread violation takes place—contrary to international commitments—it is the concern of all. The solemn commitments of the U.N. Charter, of the U.N.'s Universal Declaration of Human Rights, of the Helsinki accords and of many other international instruments must be taken just as seriously as commercial or security agreements.

OTHER HUMAN NEEDS STRESSED

The issue is important by itself. It should not block progress on other important matters affecting the security and well-being of our people and of world peace. It is obvious that the reduction of tension, the control of nuclear arms, the achievement of harmony in troubled areas of the world and the provision of food, good health and education will independently contribute to advancing the human condition.

In our relations with other countries these mutual concerns will be reflected in our political, our cultural and our economic attitudes.

These then are our basic priorities as we work with other members to strengthen and to improve the United Nations:

We will strive for peace in the troubled areas of the world.

We will aggressively seek to control the weaponry of war.

We will promote a new system of international economic progress and cooperation; and

We will be steadfast in our dedication to the dignity and well-being of people throughout the world.

I believe this is a foreign policy that is consistent with America's historic values and commitments. I believe it is a foreign policy that is consonant with the ideals of the United Nations.

Thank you.

WAR ON TROPICAL DISEASES

Mr. KENNEDY. Mr. President, one of the most pernicious roadblocks to the development efforts of many countries in the Third World—particularly those in Africa—is the continued plague of tropical diseases, which not only brings death to millions every year, but saps the strength, energy, and economic potential of millions more.

The challenge confronting the international community in eradicating tropical diseases has long been known. Only the resources to meet the challenge have been lacking.

Mr. President, as I noted last year, in submitting to the Senate a special study mission report prepared jointly by the Subcommittee on Refugees and the Subcommittee on Health on "World Hunger, Health, and Refugee Problems," many serious diseases persist at endemic and epidemic levels throughout much of the developing nations of the world. Most significant are the parasitic diseases, which produce chronic illness and disability in hundreds of millions of people.

Last year the World Health Organization—WHO—announced a new program to attempt to deal with six major parasitic diseases, including malaria, schistosomiasis, trypanosomiasis, leprosy, leishmaniasis, and filariasis. Although WHO has now projected a $140 million, 5-year program to date the United States has contributed only technical and moral support.

This unfortunate lapse in American support of an unquestionably deserving international health effort is the focus of an excellent article in today's New York Times by Dr. Howard Hiatt, who is dean of the Harvard School of Public Health.

Dr. Hiatt succinctly states the case for a far more generous response by the United States to the WHO program against tropical diseases. He properly reminds us that if the United States can spend over $800 million this year against the war on cancer, we surely can find the resources to support a worldwide effort against tropical diseases—which now receives less than $40 million from all sources.

Mr. President, I am hopeful that the new administration will carefully review our Nation's current funding in support of WHO's tropical disease program, and I shall actively support legislation to increase this support.

As Dr. Hiatt wirites:

The Carter Administration has undertaken moral leadership in several spheres. What better time for our Government to commit to the special (WHO) program major financial support, and many of our leading scientists their knowledge and technical skills?

I commend Dr. Hiatt's article to the attention of Senators, and I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, Mar. 23, 1977]

ERADICATING TROPICAL DISEASES

(By Howard H. Hiatt)

BOSTON.—In 1970, Congress declared war against cancer. Large sums have been poured into the battle, and many of our most distinguished senior and promising younger biological scientists have turned to cancer research. They have been influenced not only by the opportunity to apply their disciplines to a problem of social significance but also the generous support available. Further, the moment has seemed ripe for applying extraordinary recent advances in biological knowledge to human cancer.

While cancer is justifiably of major concern to Americans, and cancer research must have our continuing support, we should be aware that hundreds of millions of people all over the world suffer from a group of terrible diseases for which additional resources could likely work wonders in a short time. These are the so-called tropical diseases, prevalent in developing countries.

In contrast to the over $800 million allocated for cancer research this year by the United States National Cancer Institute, last year's expenditures by all nations for research on tropical diseases were less than $40 million. Since these diseases result from parasitic infections, the many chemical differences that distinguish human cells from parasites almost certainly would facilitate the development of vaccines and therapeutic agents that would be harmless to the host and lethal to the invader.

The World Health Organization has recently declared war against six tropical diseases that contribute greatly to poverty, chronic sickness and death in most of the developing world. Malaria kills more than a million children a year in Africa alone. Schistosomiasis kills few of its estimated 200 million victims directly but, like several other tropical diseases, commonly precludes even economic self-sufficiency. One of filariasis' most feared forms is river blindness, which has led to the abandonment of much fertile African farmland and, in some villages, to blindness in half the remaining adult males.

Sleeping sickness, which threatens 35 million Africans, Chagas' disease, which cause chronic sickness and often death in more than 10 million Latin Americans and an infection that prevents livestock production in much of Africa, are all manifestations of trypanosomiasis. Leprosy and leishmaniasis are the other two targets of the new special program for research and training in tropical diseases.

The program will emphasize the application of the fruits of modern science to these problems. However, its leader, Dr. A. O. Lucas, a remarkable Nigerian physician, and its advisory committee, which includes several of the world's most accomplished biologists, are well aware of the paucity of scientists in the developing countries with the training needed to undertake sophisticated research.

They will, therefore, concentrate not only on research, but also on training programs, both to take place in developing countries.

These will depart from the traditional pattern of bringing promising young people from developing countries to high-powered laboratories in the United States or Europe, where the emphasis is on pure science or on diseases of local concern. Under these circumstances, the trainees commonly return home ill-equipped to deal with the problems of their country.

The special program will encourage accomplished scientists to locate for periods of several months or more in laboratories in developing countries and to undertake research in tropical diseases in their home laboratories.

In this way, relevant settings will be provided for training not only tomorrow's leaders from the less-developed world but also those many gifted young Americans and others who would be attracted to such research.

Critics suggest that elimination of the tropical diseases is a social, rather than a biomedical problem. Dr. Lucas recognizes that improvements in nutrition, education, housing and other social and economic conditions would be more effective than vaccines and drugs. However, such measures must complement rather than replace medical measures.

Others argue that elimination of these diseases would only lead to increased deaths from starvation. In fact, there is much historical evidence that limitation of population generally takes place only *after* important control of disease begins. The special program will integrate its efforts with comprehensive health-care programs that include family planning.

The World Health Organization has projected a budget of $140 million for the first five years of the program. Several governments have already made financial contributions. The United States National Institutes of Health has given important technical and moral support, and there is hope that the United States Government will join the donor nations shortly.

This is likely to be the year in which smallpox will be eradicated, largely as a partnership among the nations of the world. This also promises to be remembered as the year in which the Carter Administration has undertaken moral leadership in several spheres. What better time for our Government to commit to the special program major financial support, and many of our leading scientists their knowledge and technical skills?

A CABINET LEVEL DEPARTMENT OF EDUCATION

Mr. HUMPHREY. Mr. President, I recently introduced legislation which would create a Department of Education. This is not the first time I have introduced such legislation, but I hope this time this legislation will be enacted into law.

I feel that with the present focus on governmental reorganization, now is the time to create a Department of Education. President Carter, last June, expressed his position that as part of his general reorganization plan an important new department that should be created would be a Department of Education.

An article by John Ryor, president of the National Education Association, in the Kappan magazine of April 1977, presents a strong, reasoned case for a Department of Education.

Mr. President, I ask unanimous consent that this article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE CASE FOR A FEDERAL DEPARTMENT OF EDUCATION

(By John Ryor)

(The president of the nation's largest teacher union argues in favor of taking the E out of HEW.)

I begin with the assumption that we educate to serve young people, to prepare our children for a fast-changing world, a world with complex problems and exciting opportunities. I think most teachers would agree.

But to meet the demands of change, education must change too. And teachers know, perhaps better than most, that times have already changed, that children grow up in a different world than we knew even a decade ago. The next generation will be far different from (and probably ahead of) the young people in school today.

It is often said today that education has "failed." In fact, quite the opposite is true. Because American education has succeeded so well, we have developed a highly complex and technical society that demands more and more of an educated population. At the same time, we've created an idealistic and articulate citizenry dedicated to true social justice. It is these new demands that education struggles to meet without adequate money, status, legal support, or a sound organizational base. Such a base could be provided by a federal Department of Education.

If excellence is what we seek for our children, in terms of what education can do to help each child become as fine a human being and as useful a citizen as our combined love and resources can provide, education must have a voice that is sustained and concentrated at the point where opportunity can be funded and channeled equally to all of our citizens—at the federal level of government.

A cabinet-level secretary is needed for many reasons. First, there is no doubt that serious educational problems are being smothered in the massive bureaucracy of Health, Education, and Welfare. We need a secretary of education who can concentrate solely on the problems of education and not be bogged down with the crushing problems of health and welfare too.

Let us be sure no one misconstrues our demand for taking the E out of HEW. We are not trying to downgrade health and welfare priorities. On the contrary, we are painfully aware that a child's health, his family's physical health, and the economic and social health of his family and community have a very direct bearing on the education of that child. We do not ask for separate department status to jeopardize these other important programs.

Consider the enormous job confronting HEW: welfare reform; control of inflationary health care costs; provision of higher quality, more convenient medical care; and solution of the deepening financial crises of the nation's schools, colleges, and universities. Any of these tasks would test an HEW secretary severely. But all of these problems must be confronted at the same time by a single cabinet officer under the present setup.

This mushrooming of social needs is the key to the whole problem. When President Eisenhower created HEW in 1953, neither health, nor education, nor welfare presented problems in anything like their present dimensions. Their grouping appeared logical enough at the time. But now the situation has changed dramatically.

For example, in fiscal year 1954 HEW expenditures were less than $2 billion. Education spending—most of it for vocational training—was $235 million. The HEW budget in fiscal year 1978 is nearly $160 billion, with only $8.1 billion earmarked for education. Between 1968 and 1978 the HEW budget has nearly quadrupled, growing from 23% of the total federal budget to 36%. Meanwhile, education outlays have a little more than doubled, from $3.6 billion to $8.1 billion.

Education is shortchanged because more than 90% of the massive HEW budget is uncontrollable; that is, the expenditures are required by law. The lion's share of the education budget is in the controllable column, susceptible to cuts at budget-trimming time. This is what has happened to the education components of HEW's annual budget year after year. This situation has forced teachers and their education-minded allies to take their fight to Congress to override vetoes and increase education funding.

A second reason for a separate Department of Education is the need to consolidate the government's education activities and give them some unified direction with greater impact for the separate parts. More than 40 federal departments, agencies, and bureaus are involved to some degree in the support of education. There is no single agency with authority to give overall supervision to the administering, regulating, and accounting for more than $10 billion in federally supported education and manpower training programs. This fragmented management of education programs has not been resolved by efforts to establish committees and commissions on interagency cooperation in education. The result of this fragmentation has been waste, inefficiency, and duplication of effort.

Ineffective management of education programs spells disaster for schools, colleges, and universities that depend on federal resources for stability. Lack of coordination deprives local and state education agencies of the level of support required to maintain high standards of quality education. The some 200 different educational programs *outside* the Office of Education need strong coordination with educational policy—and that takes department status instead of office status.

Another argument for department status grows out of the current financial crisis in education, the most serious in many years. The recession-ridden economy continues to plague schools, and now an energy crisis forces further cutbacks in education services and programs. Rising costs and taxpayer resistance are causing budget slashes in school districts around the nation. Entire school systems are closing.

Frustrated by unresponsive government, big business, spiraling consumer prices, and increased taxes, citizens are exercising what little power they feel they have left to shout *NO* to school budget increases. Local and state funds are drying up. Yet the local community pays 48.4 percent of the school dollar, and the states pay 43.4 percent while the federal share of the elementary and secondary school funding is 8.2 percent. The NEA and other education organizations are committed to the proposition that the full federal share should be one-third of the costs of public education. But getting this kind of money from Congress is impossible if education does not have a powerful representative in the budgeting process.

The top government official in education needs easy access to the White House and Congress—and a strong voice. For the crises in education, including not only the problem of funding but the racial and human relations problems, the loss of public confidence, and growing student independence (which is sweeping ever lower into the elementary grades) require top-level attention and action.

And there are additional reasons for an education secretary with full cabinet status:

Placing the responsibility for education in one department under one administrator who could devote his full attention to it would cut down on the waste and duplication that inevitably result when noneducators seek federal dollars to try things that have no practical applicability or transferability to actual classroom situations.

A cabinet officer, with the visibility and prestige of cabinet status, would have a much greater opportunity to bring educational concepts to other areas of government than the assistant secretary and subcabinet commissioner now have.

The appointment of a secretary of education would benefit Congress. Such an official would provide a single repository of information to answer the questions Congress raises as it deals with authorizing and appointing legislation. A secretary would be directly responsible to Congress for the success or failure of its programs.

A Department of Education would probably be granted more funds for education earlier in each fiscal year. This would happen because a single voice for education, setting out the needs and the priorities, mustering and uniting all the lobbying efforts necessary to have funds approved by the executive and legislative branches, would be a potent force in seeking more equitable federal support for all education ventures.

Education is one of the nation's largest businesses. Upwards of 65 million Americans are directly involved in education. Education is the nation's second largest fiscal commitment. What the schools do will shape society for generations. And this is too important for the present second-level status of the USOE.

Very few people in this country are really opposed to education. But many people, probably most, take education almost for granted—even as merely another tax burden—because they have accepted it so thoroughly and matter-of-factly.

And status, in any operational sense we are interested in—as a force to get good things done for the education of our children—has got to mean more than just a me-too acceptance without commitment. It has to be alive, active, at work. In mundane but magical government language, it translates into priority.

Yet in the 23 years that education has been part of HEW there have been 11 different commissioners of education. The average tenure has been about two years. A commissioner hardly has a chance to learn his way around Washington before throwing in the sponge and joining a long list of frustrated excommissioners who leave because education has such a low priority. Salary was the reason given by the last commissioner to leave the USOE. The education commissioner is paid $37,800 a year, compared to the $63,000 drawn by a cabinet officer. Big-city school superintendents all make substantially more than the nation's top federal education official.

At the same time, there have also been 11 different HEW secretaries over the past 23 years. They too, for the most part, leave in frustration. This frequent turnover of secretaries leaves much of the power and influence in the federal government's largest bureaucracy to members of Congress and their staffs who have long service.

But though the nation's top education official ranks low in status and authority, unprecedented support is building to give the position cabinet-level rank.

Rufus E. Miles, Jr., is a former director of administration for HEW. He is possibly the nation's leading expert on the department's structure. Miles, who calls for a Department of Education in a scholarly paper on the subject, comments: "No position in the executive branch of government requires a profounder understanding of American social structure and a more sensitive use of power than that of the top education official."

There is considerable support in Congress for a separate Department of Education. No fewer than 16 bills, introduced into both houses during the Ninety-fourth Congress, proposed such a plan.

Senator Abraham Ribicoff (D-Conn.), a

former HEW secretary, said last September 29, in introducing a bill (S. 3857) for a separate education department, "Our whole system of education is dependent upon the leadership and the commitment that the federal government takes. The federal government must assume a greater responsibility for the education of its citizens. Only an increased federal priority to education can increase the American people's confidence in our educational system and in the future of this valuable resource for our nation."

Two bills have already been introduced this year during the first session of the Ninety-fifth Congress, one in each chamber. Senator Hubert Humphrey (D-Minn.), long an advocate of a separate education department, sponsored a measure (S. 225) on January 14. Coupled with the cabinet-level education department, Humphrey's bill calls for establishment of a Federal Interagency Committee on Education and a National Advisory Commission on Education.

And President Carter told the NEA Political Action Committee in an interview last June, when he had established himself as the leading Democratic candidate, that he firmly supports a cabinet post for education. He said: "I think the public's ready for a clear expression from the national viewpoint about what we should do for education in this country. It's something that's been relegated to a secondary position in the past.

"The only new department that I know of that ought to be created is a separate Department of Education. I will pursue this goal in the context of an overall reorganization of government. My goal, expressed many times during the campaign, was to reduce the 1,900 departments and agencies down to no more than 200. I believe that's an achievable goal. The one new department I would be in favor of creating would be a separate Department of Education. . . . I think we need to do this, and I'm committed to try it out."

On February 4 President Carter asked Congress for broad authority to reorganize federal agencies and said that his campaign commitment to pare down the government structure "was one of the major reasons" he was elected.

With President Carter, many influential members of Congress, and the great majority of the education community for it, the establishment of a separate department for education appears imminent. The only education organization I know of that is opposed to an education department is the American Federation of Teachers. The AFT supports a plan calling for the creation of a 21-member Board of Education that would appoint the highest-ranking education official. It is essentially the plan recommended to President Harding in 1922.

The NEA is well aware that there are several approaches to a plan establishing a separate Department of Education and much disagreement over how it should be implemented.

The NEA believes that any service directly related to the teaching-training-learning process, or services which support the care, development, or nurture of learners of all ages in the educational process, should be considered under the purview and jurisdiction of the Department of Education.

The function of the Department of Education, the NEA believes, shall be to serve as a single entry point for the formulation of comprehensive educational priorities, policy, planning, and programmatic goals. These shall include administrative control, oversight, coordination, resource allocation, and accountability.

Therefore, any agency, department, office, bureau, division, foundation, academy, institution, or other entity engaged in the delivery of education or educational support services should be required to submit justifications, programs, plans, objectives, and resource allocations for analysis and assessment by the Department of Education.

This would include all programs now administered by the Office of Education, plus the myriad of education programs scattered throughout the vast federal bureaucracy. Some of these programs, for example, would include Indian education, child development, the school lunch and breakfast programs of the Department of Agriculture, dependent schools of the Departments of Defense and State, plus scores of others.

The NEA, however, would not oppose a department without all of these components at the outset. But the association would seek to have these programs added eventually.

In a time of great social change, somebody has to remind the people that our great growth in the past came from our educational system. And somebody has to awaken the people to the truth that only education can provide the solid, constructive, creative kinds of change that will bring our nation and the world through this troubled period into a better society. A Department of Education, headed by a cabinet secretary, is the catalyst that can create this awakening.

CHICAGO COMMUNITY CURRENCY EXCHANGES INVESTIGATED: AN EXCHANGE OF FAVORS

Mr. PERCY. Mr. President, in December 1976, the Better Government Association—BGA—completed a 6-month investigation of Chicago's community currency exchanges. The BGA explored the rate structure, industry practices, degree of oligopoly, and Government-industry interactions of the exchanges.

Community currency exchanges perform as "bank surrogates" in many neighborhoods. They cash checks, sell money orders, vend license plates and vehicle stickers, and provide other similar financial services. In poorer neighborhoods, where banks may not be nearby and residents are not highly mobile, the community currency exchanges can be an important, even crucial part of everyday life.

The BGA's investigation produced evidence suggesting that State government officials may be involved with leading exchange owners in a symbiotic "exchange of favors" relationship. The pattern of mutual back scratching by the regulators and the regulated is a familiar one. The BGA report puts it this way:

Our findings led us to question whether the State has been acting more on behalf of the welfare of the currency exchange owners than the people who use their services. Who is regulating whom?

The report also explores the possibility of unethical business practices by the exchange owners.

I believe it is precisely the kind of report we need to see more of. Reports prepared by citizens, on topics of interest to citizens, are one of the most valuable commodities available to a government desiring to be responsive to its citizens. Marjorie C. Benton, the BGA's president, J. Terrence Brunner, its executive director, and the other fine board members, officers, and general members are to be commended for their dedicated efforts toward better Government.

RULES OF THE COMMITTEE ON HUMAN RESOURCES

Mr. WILLIAMS. Mr. President, under section 133B of the Legislative Reorganization Act of 1946 (2 U.S.C. 190–a–2), each committee of the Senate is required to adopt rules governing the procedure of the committee and to publish these rules in the CONGRESSIONAL RECORD. In accordance with that section, I am pleased to submit for printing the rules of the Senate Committee on Human Resources, as amended February 22, 1977. I am also including for the information of my colleagues the committee's adopted guidelines governing the conduct of hearings, markup sessions and other related matters. I ask unanimous consent that the aforementioned material be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

SENATE COMMITTEE ON HUMAN RESOURCES,
HARRISON A. WILLIAMS, JR., CHAIRMAN

(Rules of Procedure (as amended, Feb. 22, 1977))

Rule 1.—Unless the Senate is meeting at the time, or it is otherwise ordered, the Committee shall meet regularly at 10:30 a.m. on the fourth Thursday of each month in room 4232, Dirksen Senate Office Building. The Chairman may, upon proper notice, call such additional meetings as he may deem necessary.

Rule 2.—The Chairman of the Committee or of a subcommittee, or if the Chairman is not present, the ranking Majority member present, shall preside at all meetings.

Rule 3.—Meetings of the Committee or a subcommittee, including meetings to conduct hearings, shall be open to the public except as otherwise specifically provided in subsection (b) and (d) of Rule 25.7 of the Standing Rules of the Senate.

Rule 4.—(*a*) Subject to paragraph (b), one-third of the membership of the Committee, actually present, shall constitute a quorum for the purpose of transacting business. Any quorum of the Committee which is composed of less than a majority of the members of the Committee shall include at least one member of the Majority and one member of the Minority.

(*b*) A majority of the members of a subcommittee, actually present, shall constitute a quorum for the purpose of transacting business: provided, no measure or matter shall be ordered reported unless such majority shall include at least one member of the Minority who is a member of the subcommittee. If, at any subcommittee meeting, a measure or matter cannot be ordered reported because of the absence of such a Minority member, the measure or matter shall lay over for a day. If the presence of a member of the Minority is not then obtained, a majority of the members of the subcommittee, actually present, may order such measure or matter reported.

(*c*) No measure or matter shall be ordered reported from the Committee or a subcommittee unless a majority of the Committee or subcommittee is actually present at the time such action is taken.

Rule 5.—With the approval of the Chairman of the Committee or subcommittee, one member thereof may conduct public hearings other than taking sworn testimony.

Rule 6.—Proxy voting shall be allowed on all measures and matters before the Committee or a subcommittee if the absent member has been informed of the matter on which he is being recorded and has affirmatively requested that he be so recorded. While proxies may be voted on a motion to report a measure or matter from the Committee, such a motion shall also require the concurrence of a majority of the members who are actually present at the time such action is taken.

Rule 7.—There shall be prepared and kept a complete transcript or electronic recording adequate to fully record the proceedings of

each Committee or subcommittee meeting or conference whether or not such meetings or any part thereof is closed pursuant to the specific provisions of subsections (b) and (d) of Rule 25.7 of the Standing Rules of the Senate, unless a majority of said members vote to forgo such a record. Such records shall contain the vote cast by each member of the Committee or subcommittee on any question on which a "yea and nay" vote is demanded, and shall be available for inspection by any Committee member. The Clerk of the Committee, or the Clerk's designee, shall have the responsibility to make appropriate arrangements to implement this Rule.

Rule 8.—The Committee, and each subcommittee, shall undertake, consistent with the provisions of section 133A of the Legislative Reorganization Act of 1946, as amended, to issue public announcement of any hearing it intends to hold at least one week prior to the commencement of such hearing.

Rule 9.—The Committee or a subcommittee shall, so far as practicable, require all witnesses heard before it to file written statements of their proposed testimony at least 24 hours before a hearing, unless the Chairman and the ranking Minority member determine that there is a good cause for failure to so file, and to limit their oral presentation to brief summaries of their arguments. The presiding officer at any hearings is authorized to limit the time of each witness appearing before the Committee or a subcommittee. The Committee or a subcommittee shall, as far as practicable, utilize testimony previously taken on bills and measures similar to those before it for consideration.

Rule 10.—Should a subcommittee fail to report back to the full Committee on any measure within a reasonable time, the Chairman may withdraw the measure from such subcommittee and report that fact to the full Committee for further disposition.

Rule 11.—No subcommittee may schedule a meeting or hearing at a time designated for a hearing or meeting of the full Committee. No more than one subcommittee executive meeting may be held at the same time.

Rule 12.—It shall be the duty of the Chairman in accordance with section 133(c) of the Legislative Reorganization Act of 1946, as amended, to report or cause to be reported to the Senate, any measure or recommendation approved by the Committee and to take or cause to be taken, necessary steps to bring the matter to a vote in the Senate.

Rule 13.—Whenever a meeting of the Committee or subcommittee is closed pursuant to the provisions of subsection (b) or (d) of Rule 25.7 of the Standing Rules of the Senate, no person other than members of the Committee, members of the staff of the Committee, and designated assistants to members of the Committee shall be permitted to attend such closed session, except by special dispensation of the Committee or subcommittee or the Chairman thereof.

Rule 14.—The Chairman of the Committee or a subcommittee shall be empowered to adjourn any meeting of the Committee or a subcommittee if a quorum is not present within fifteen minutes of the time scheduled for such meeting.

Rule 15.—Whenever a bill or joint resolution repealing or amending any statute or part thereof shall be before the Committee or a subcommittee for final consideration, the Clerk shall place before each member of the Committee or subcommittee a print of the statute or the part of section thereof to be amended or replaced showing by stricken-through type, the part or parts to be omitted, and in italics, the matter proposed to be added.

Rule 16.—An appropriate opportunity shall be given the Minority to examine the proposed text of Committee reports prior to their filing or publication. In the event there are supplemental, minority, or additional views, an appropriate opportunity shall be given the Majority to examine the proposed text prior to filing or publication.

Rule 17.—(*a*) The Committee, or any subcommittee, may issue subpoenas, or hold hearings to take sworn testimony or hear subpoenaed witnesses, only if such investigative activity has been authorized by majority vote of the Committee.

(*b*) For the purpose of holding a hearing to take sworn testimony or hear subpoenaed witnesses, three members of the Committee or subcommittee shall constitute a quorum: provided, with the concurrence of the Chairman and ranking minority member of the Committee or subcommittee, a single member may hear subpoenaed witnesses or take sworn testimony.

(*c*) The Committee may, by a majority vote, delegate the authority to issue subpoenas to the Chairman of the Committee or a subcommittee, or to any member designated by such Chairman. Prior to the issuance of each subpoena, the ranking minority member of the Committee or subcommittee, and any other member so requesting, shall be notified regarding the identity of the person to whom it will be issued and the nature of the information sought and its relationship to the authorized investigative activity, except where the Chairman of the Committee or subcommittee, in consultation with the ranking minority member, determines that such notice would unduly impede the investigation. All information obtained pursuant to such investigative activity shall be made available as promptly as possible to each member of the Committee requesting same, or to any assistant to a member of the Committee designated by such member in writing, but the use of any such information is subject to restrictions imposed by the Rules of the Senate. Such information, to the extent that it is relevant to the investigation shall, if requested by a member, be summarized in writing as soon as practicable. Upon the request of any member, the Chairman of the Committee or subcommittee shall call an executive session to discuss such investigative activity or the issuance of any subpoena in connection therewith.

(*d*) Any witness summoned to testify at a hearing, or any witness giving sworn testimony, may be accompanied by counsel of his own choosing who shall be permitted, while the witness is testifying, to advise him of his legal rights.

(*e*) No confidential testimony taken or confidential material presented in an executive hearing, or any report of the proceedings of such an executive hearing, shall be made public, either in whole or in part or by way of summary, unless authorized by a majority of the members of the Committee or subcommittee.

Rule 18.—Subject to statutory requirements imposed on the Committee with respect to procedure, the rules of the Committee may be changed, modified, amended or suspended at any time; provided, not less than a majority of the entire membership so determine at a regular meeting with due notice, or at a meeting specifically called for that purpose.

Rule 19.—In addition to the foregoing, the proceedings of the Committee shall be governed by the Standing Rules of the Senate and the provisions of the Legislative Reorganization Act of 1946, as amended.

GUIDELINES OF THE SENATE COMMITTEE ON HUMAN RESOURCES WITH RESPECT TO HEARINGS, MARK UP SESSIONS, AND RELATED MATTERS

Hearings

Section 133A(*a*) of the Legislative Reorganization Act requires each Committee of the Senate to publicly announce the date, place, and subject matter of any hearing at least one week prior to the commencement of such hearing.

The spirit of this requirement is to assure adequate notice to the public and other members of the Senate as to the time and subject matter of proposed hearings. In the spirit of Section 133A(*a*) and in order to assure that members of the Committee are themselves fully informed and involved in the development of hearings:

1. Public notice of the date, place, and subject matter of each Committee or subcommittee hearing should be inserted in the Congressional Record seven days prior to the commencement of such hearing.

2. Seven days prior to public notice of each Committee or subcommittee hearing, the Committee or subcommittee should provide written notice to each member of the Committee of the time, place, and specific subject matter of such hearing, accompanied by a list of those witnesses who have been or are proposed to be invited to appear.

3. The Committee and its subcommittees should, to the maximum feasible extent, enforce the provisions of Rule 9 of the Committee rules as it relates to the submission of written statements of witnesses twenty-four hours in advance of a hearing. When statements are received in advance of a hearing, the Committee or subcommittee (as appropriate) should distribute copies of such statements to each of its members.

Executive sessions for the purpose of marking up bills

In order to expedite the process of marking up bills and to assist each member of the Committee so that there may be full and fair consideration of each bill which the Committee or a subcommittee is marking up the following procedures should be followed.

1. Seven days prior to the proposed date for an executive session for the purpose of marking up bills the Committee or subcommittee (as appropriate) should provide written notice to each of its members as to the time, place, and specific subject matter of such session, including an agenda listing each bill or other matters to be considered and including—

(*a*) two copies of each bill, joint resolution, or other legislative matter (or Committee Print thereof) to be considered at such executive session; and

(*b*) two copies of a summary of the provisions of each bill, joint resolution, or other legislative matter to be considered at such executive session.

2. Three days prior to the scheduled date for an executive session for the purpose of marking up bills, the Committee or subcommittee (as appropriate) should deliver to each of its members two copies of a cordon print or an equivalent explanation of changes of existing law proposed to be made by each bill, joint resolution, or other legislative matter to be considered at such executive session.

3. In so far as practical, prior to the scheduled date for an executive session for the purpose of marking up bills, each member of the Committee or a subcommittee (as appropriate) should provide to all other such members two written copies of any amendment or a description of any amendment which that member proposes to offer to each bill, joint resolution, or other legislative matter to be considered at such executive session.

4. In so far as practical, prior to the scheduled date for an executive session for the purpose of marking up bills, the Committee or a subcommittee (as appropriate) should provide each member with a copy of the printed record or a summary of any hearings conducted by the Committee or a subcommittee with respect to each bill, joint resolution, or other legislative matter to be considered at such executive session.

Committee reports, publications, and related documents

Rule 16 of the Committee Rules requires that the Minority be given an opportunity to examine the proposed text of Committee reports prior to their filing and that the Majority be given an opportunity to examine the proposed text of supplemental, minority or additional or individual views prior to their filing. The views of all members of the Committee should be taken fully and fairly into account with respect to all official documents filed or published by the Committee. Thus, consistent with the spirit of Rule 16, the proposed text of each Committee report, hearing record, and other related Committee document or publication should be provided to the Chairman and ranking minority member of the Committee and the Chairman and ranking minority member of the appropriate subcommittee at least forty-eight hours prior to its filing or publication.

BYELORUSSIAN INDEPENDENCE DAY

Mr. PERCY. Mr. President, this week we commemorate the 59th anniversary of the declaration of independence of the Byelorussian Democratic Republic, an event which took place in Minsk on March 25, 1918. Soon after, a provisional constitution guaranteeing free elections and basic human rights was adopted.

We all know that Byelorussian independence was short lived. The following January, a Soviet republic was installed in Smolensk, and Byelorussia was forcibly incorporated into the Soviet Union.

As we recall these events, it is important that we express our continuing interest in the courageous people of Byelorussia who have somehow managed against all odds to maintain their identity and culture. At the same time, we can take the opportunity to mention our continuing admiration for the constructive citizenship of our Americans of Byelorussian birth and descent.

NAT "KING" COLE

Mr. BROOKE. Mr. President, musical talent is a rare but truly wonderful gift. For it is not just a good voice or a fine sense of rhythm. It is humanity, compassion, intelligence, and humor. These are the critical qualities musicians must have if they are to really achieve their ultimate goal of reaching others.

Few in our lifetime have displayed so subtle and so brilliant a blend of these key qualities as Nat "King" Cole. He was, by all accounts, in a class by himself.

Happily for those of us who treasured Nat's work, his daughter, Natalie, is picking up where her father left off: at the top. Already she has garnered two consecutive Grammy Awards, and the promise of more is plain to see.

I was privileged to know Nat and his lovely and devoted wife. And I know how proud Nat would have been to watch Natalie step up on that stage in Los Angeles to accept her due acclaim. For a man who gave so much all his life, it would have only been fitting had he been able to receive this particular joy during his life. I wish it could have been.

Mr. President, another who wished it could have been is Ken Mayer of the Boston Herald American. Ken has caught the feelings and qualities that made Nat "The King" in a wonderful article which I ask unanimous consent to have printed in the RECORD. It is an excellent portrayal of an extraordinary man.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NAT THE KING WOULD HAVE BEEN PROUD

(By Ken Mayer)

If only Nat "King" Cole could have been alive last week to see his daughter Natalie snag her second consecutive "Grammy" at that annual Los Angeles shindig.

For had he been there, Cole would have stood tall among those who rose to give his daughter a standing ovation, and only those of us who were privileged to know him in life, can attempt a guess at the pride he would have felt. And more the significance of the award, that Natalie should receive it short days after the one marking the anniversary of her father's passing. A date that no columnist in entertainment, should let pass without notice.

Cole was that one personality in entertainment who comes this way on rare occasion, and for any writer to have brushed his being by the nature of whatever assignment, was to have felt the unmistakable touch of class.

For Nat "King" Cole was no ordinary singer or performer, nor was he the "property" of any one form of the performing arts. Cole was Cole, and a West Coast scrivener best capsuled his greatness with the following. "It was once said of Cole that his greatness sneaked up on the unaware, attacked its prey with pleasing intonations, and left the victim the richer for the melodic assault." And may this column add that Cole was an individual who abhorred the flamboyant, yet exuded its qualities in a tasteful manner.

"My ambition," he once said, "is to be able to sit back and appreciate myself as a person as well as a performer. Once you can see people respecting you for what you are, then you begin to feel that everything you've done has not been in vain." What columnist could top that quote?

Nat "King" Cole was a most unusual singer, who relied on no stage prop save ability. And with each song he caressed, the character of the man burned so brightly that even the drowning din of the band was no protection against the piercing appeal of its rays.

Cole was himself, both on-stage and off, and this God-given asset saved him the torment of artificiality. The man loved children and they, in their own inimitable ways, reflected their love for him. And whether visiting the afflicted in hospitals, or giving to the poor completely in private, his every action toward those ends became a well kept secret.

And how difficult for any writer to accurately measure the true stature of such a man when his every self-imposed secret evaded the yardstick of human comparison. Soft-spoken even in anger, so forceful were his soft modulations, that the cushioned lowness of his tone was oft-times more piercing than the shrillest shout. And most times, more devastating.

The simple joy of living and performing were his guidemarks to greatness, and never in his lifetime did he compromise his honesty of purpose. Proud of his family, he zealously guarded their image, and never once did his actions mar it in any way.

Nat "King" Cole was proud of his color, and no living man ever wore it with more dignity. Once criticized for his outspokenness on his racial views, he softly salvoed his attacker into submission with this simple sentence. "Some people are so busy stewing in their own hate, they can't do anything—even for themselves." His only hatred was hate itself.

While he lived, Cole made us music millionaires, and from his "Mona Lisa" to "A Blossom Fell," he granted songs an immortality that even his death was powerless to diminish. He granted his industry a dignity and integrity that so many of its members lack in frightening quantity.

Had Cole been in that Los Angeles audience the other night when his daughter Natalie stepped on stage to receive her "Grammy," I'm sure a lonely teardrop might have found its way down his proud face. As I'm sure it did for many at home, who thought of him, while they watched his child.

DIRECT POPULAR ELECTION OF THE PRESIDENT

Mr. BAYH. Mr. President, yesterday the President of the United States transmitted to the Congress recommendations for reform of the Nation's election system. The package included legislation to open the election process for participation of all our citizens and to establish high ethical standards for the fairness and financing of campaigns. In addition I am pleased that the President's recommendations include a constitutional amendment to abolish the electoral college and allow direct popular election of the President and Vice President.

As we open our elections to more complete citizen participation and as we improve the standards of fairness in campaign finance, it is important that we also assure in our Presidential elections that every vote is counted, every vote has the same weight and the candidate with the most popular votes wins. Under the electoral college that is not the case. Only direct election corrects those faults and assures American voters of equal treatment in a democratic election.

The President's announcement yesterday was the result of a long and careful study of electoral reform by the President and Vice President MONDALE. I am sure we all appreciate the careful attention that the administration has given to this important matter, and I ask unanimous consent to have the text of the President's statement on direct election printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

[Statement of the President, Mar. 22, 1977]

DIRECT POPULAR ELECTION OF THE PRESIDENT

My fourth recommendation is that the Congress adopt a Constitutional amendment to provide for direct popular election of the President.

Such an amendment, which would abolish the Electoral College, will ensure that the candidate chosen by the voters actually becomes President. Under the Electoral College, it is always possible that the winner of the popular vote will not be elected. This has already happened in three elections, 1824, 1876, and 1888. In the last election, the result could have been changed by a small shift of votes in Ohio and Hawaii, despite a popular vote difference of 1.7 million.

I do not recommend a Constitutional amendment lightly. I think the amendment process must be reserved for an issue of overriding governmental significance. But the method by which we elect our President is such an issue.

I will not be proposing a specific direct election amendment. I prefer to allow the Congress to proceed with its work without the interruption of a new proposal.

Mr. BAYH. Mr. President, Senate Joint Resolution 1, which has been called the "direct election amendment," now is before the Senate, and will accomplish the result that has been recommended by the President and Vice President. I am sure that I speak for the many cosponsors of this resolution in urging once again on this occasion that the 95th Congress give careful and prompt attention to this long-needed reform.

I request unanimous consent to have the text of Senate Joint Resolution 1 printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

S. J. RES. 1

Joint resolution proposing an amendment to the Constitution to provide for the direct popular election of the President and Vice President of the United States

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein). That the following article is proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as part of the Constitution when ratified by the legislatures of three-fourths of the several States within seven years from the date of its submission by the Congress:

"ARTICLES —

"SECTION 1. The people of the several States and the District constituting the seat of government of the United States shall elect the President and Vice President. Each elector shall cast a single vote for two persons who shall have consented to the joining of their names as candidates for the offices of President and Vice President. No candidate shall consent to the joinder of his name with that of more than one other person.

"SEC. 2. The electors of President and Vice President in each State shall have the qualifications requisite for electors of the most numerous branch of the State legislature, except that for electors of President and Vice President the legislature of any State may prescribe less restrictive residence qualifications and for electors of President and Vice President the Congress may establish uniform residence qualifications.

"SEC. 3. The persons joined as candidates for President and Vice President having the greatest number of votes shall be elected President and Vice President, if such number be at least 40 per centum of the whole number of votes cast.

"If, after any such election, none of the persons joined as candidates for President and Vice President is elected pursuant to the preceding paragraph, a runoff election shall be held in which the choice of President and Vice President shall be made from the two pairs of persons joined as candidates for President and Vice President who received the highest numbers of votes cast in the election. The pair of persons joined as candidates for President and Vice President receiving the greater number of votes in such runoff election shall be elected President and Vice President.

"SEC. 4. The times, places, and manner of holding such elections and entitlement to inclusion on the ballot shall be prescribed in each State by the legislature thereof; but the Congress may at any time by law make or alter such regulations. The days for such elections shall be determined by Congress and shall be uniform throughout the United States. The Congress shall prescribe by law the times, places, and manner in which the results of such elections shall be ascertained and declared. No such election, other than a runoff election, shall be held later than the first Tuesday after the first Monday in November, and the results thereof shall be declared no later than the thirtieth day after the date on which the election occurs.

"SEC. 5. The Congress may by law provide for the case of the death, inability, or withdrawal of any candidate for President or Vice President before a President and Vice President have been elected, and for the case of the death of both the President-elect and Vice President-elect.

"SEC. 6. Sections 1 through 4 of this article shall take effect one year after the ratification of this article.

"SEC. 7. The Congress shall have power to enforce this article by appropriate legislation.".

(This concludes additional statements submitted by Senators today.)

CONCLUSION OF MORNING BUSINESS

The ACTING PRESIDENT pro tempore. Is there further morning business? If not, morning business is concluded.

OFFICIAL CONDUCT AMENDMENTS OF 1977

The ACTING PRESIDENT pro tempore. Under the previous order, the Senate will now resume consideration of the pending business, Senate Resolution 110, which the clerk will state.

The legislative clerk read as follows:

A resolution (S. Res. 110) to establish a code for official conduct for the Members, officers and employees of the U.S. Senate, and for other purposes.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum. I ask unanimous consent that the time be equally charged to both sides on the resolution.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. WEICKER. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. SARBANES). Without objection, it is so ordered.

Who yields time?

Mr. WEICKER. Mr. President, I yield myself 15 minutes.

The PRESIDING OFFICER. The Senator from Connecticut is recognized.

Mr. WEICKER. Mr. President, I ask unanimous consent that the Senator from Utah (Mr. GARN) be added as a cosponsor to Senate Amendment No. 86, as modified.

The PRESIDING OFFICER. Without objection, it is so ordered.

AMENDMENT NO. 86

Mr. WEICKER. Mr President, and my fellow Senators: In the light of what occurred to my colleague, the good Senator from Maine (Mr. MUSKIE), I suppose it is not going to make much difference what I say. As long as I have sat in the Senate Chamber, I have never seen any individual so clearly present his case, so clearly have every fact on his side of the argument, so clearly have every piece of logic on his side of the argument, and then be defeated.

I think I understand that, regardless of what is presented on the floor relative to this measure, there is a certain preordained destiny as to the final outcome. I think that that is rather unfortunate, because what it means is that what we do no longer relates to the quality of our work.

I want to discuss three matters: pay raises and reform and ethics. Unfortunately, they have all been thrown in the same pot during the course of this debate for reasons ranging from demagoguery to what I consider to be negligent simplification. I think the time has come to try to treat the American people as intelligent human beings and to demand of American leadership—and I do not care whether that leadership is on the Senate floor, whether it is in the news media, or whether it is in private business—that it be accurate and precise in its mouthings and, very frankly, in its meanderings.

If the consequences of being lazy editorially or chicken politically descended solely on the head of the errant newspaper reporter or Senator or public activist, or whatever, I would not get all that riled.

But that is not what occurs as a result of the deceptive nonsense that has been peddled on the Senate floor during the past week.

Like the drunk driver who kills and who is never killed, it will not be the reporter, the Senator or the public activist who will suffer from legislative misdirection. Rather, it will be an entire and basically successful political process that is going to be left along the wayside of constitutional experimentation.

That, Mr. President, is why I am taking the gloves off today and why we are going to let the chips fall where they may.

Ethics need not be achieved at the expense of constitutional principle. Yet, this legislation does just that.

The proponents of this legislation know full well that if it were presented as law, it would fall constitutionally.

I might add, I think it can fall constitutionally also, even though presented as a rule.

There is no question in my mind that what the legislation does is to superimpose additional requirements upon those who serve as Senators and Representatives, or who are candidates for the Senate and for the House.

I think this point was very well covered in the Adam Clayton Powell case which, in effect, prohibited our rulemaking authority as among ourselves from being used to place additional requirements above and beyond those set forth in the Constitution of the United States.

So make no mistake about it, whether we win or lose in the debate on this, I predict now that should this be taken into the courts and tested, it will clearly fall on constitutional grounds.

This exercise in ethics is very reminiscent to me, anyway, of those worthies of recent vintage who shortcutted the law in order to achieve law and order.

Believe me when I say that effective ethics and constitutional ethics is not an either/or situation.

For years I have been accused by the law enforcement intelligence community of weakening their pursuit of evil by insisting such pursuit take place within the bounds of the Nation's laws and ideals.

After today, I know there are those who will say that I am against senatorial ethics and weakening the cause of them because of my insistence that whatever is propounded in the way of standards be associated with those same laws and ideals.

The problem is not rooted in philosophy.

It is simply that the word and spirit of the Constitution of the United States does not lend itself to expediency. The word and spirit of the Constitution of the United States does not lend itself to shortcuts. The word and spirit of the Constitution of the United States does not lend itself to intellectual lynchings.

Unfortunately, some or all of those traits have been evident in recently enacted or proposed "wildcat" Watergate reform legislation. More on that later.

First of all, let me comment upon the ploy of linking pay raises to ethics because, very frankly, it has been suggested that is the only way to direct it.

Where the dickens was the Democratic leadership of the Congress, and Common Cause when people were being paid $42,500 and when people were being paid $30,000.

Why is the 1977 model Senator, costing $57,000, supposed to be more ethical than the 1877 model, costing $5,000?

As far as I am concerned, when you get paid 1 cent, or if it is a nonpaid political trust, when you have one ounce of trust put in you, when you serve in that capacity as representative for your fellow citizens, you do it right or you get out. It is not a matter of $57,500 as being the magic level.

Second, the recent pay raise was not—repeat, not—recommended by Congress but by an independent commission, which, interestingly enough, was constituted to reform the rather nasty habit of Congress giving itself its own pay raises. That is a point that everybody likes to skip over. It is a fact, and it raises the question whether any reform is going to satisfy those who chronically want to tinker with the democratic process.

Third, the Senate did not accept the raise sub rosa but accepted it by a record vote of 56 to 42. That is a fact. It is not the theory of the pay raise.

If anyone is suffering from a guilt complex, induced either by visions of political gain or by editorial chastisement, then may I make one simple request: Please do your flagellation act in private and leave the Constitution of the United States and the dignity of the U.S. Senate alone.

Speaking for myself, I was not born again on February 20, 1977, in exchange for $13,000. I think I am a good Senator, worth more than a nickel of my pay, and before I would dishonor my oath of office to uphold the Constitution of the United States, I would walk away from the job.

Now, to the business of reform. I am sure that most Senators are familiar with the saying, "Once shame on you, twice shame on me." Well, if I let this smelly piece of legislation go through without a fight, the shame would be on me; because more than a year ago I did just that with the Federal financing of presidential campaigns. Frankly, I have been disappointed with myself ever since.

Remember how that was sold on the basis of being Watergate reform? That is the way it was sold. It is true that it was passed during the era of Watergate, but have any Senators read the Watergate Committee's report on that subject? Let me quote from the report, to see just how far afield this body can go in an exercise of demagoguery.

Recommendation No. 7, found on page 572 of that report:

7. The committee recommends against the adoption of any form of public financing in which tax moneys are collected and allocated to political candidates by the Federal Government.

The Select Committee opposes the various proposals which have been offered in the Congress to provide mandatory public financing of campaigns for Federal office. While recognizing the basis of support for the concept of public financing and the potential difficulty in adequately funding campaigns in the midst of strict limitations on the form and amount of contributions, the committee takes issue with the contention that public financing affords either an effective or appropriate solution. Thomas Jefferson believed "to compel a man to furnish contributions of money for the propagation of opinions which he disbelieves and abhors, is sinful and tyrannical."

The committee's opposition is based like Jefferson's upon the fundamental need to protect the voluntary right of individual citizens to express themselves politically as guaranteed by the first amendment. Furthermore, we find inherent dangers in authorizing the Federal bureaucracy to fund and excessively regulate political campaigns.

The abuses experienced during the 1972 campaign and unearthed by the Select Committee were perpetrated in the absence of any effective regulation of the source, form, or amount of campaign contributions. In fact, despite the progress made by the Federal Elections Campaign Act of 1971, in requiring full public disclosure of contributions, the 1972 campaign still was funded through a system of essentially unrestricted, private financing.

What now seems appropriate is not the abandonment of private financing, but rather the reform of that system in an effort to vastly expand the voluntary participation of individual citizens while avoiding the abuses of earlier campaigns.

Yet, that is termed Watergate reform, even though, in black and white, the committee which was charged with the responsibility of unearthing those abuses and then making whatever recommendations it deemed appropriate clearly recommended against Federal financing.

So, what followed was not Watergate reform but, rather, certain activists, certain reformers, certain Senators, and certain philosophers using an atmosphere of tragedy and apprehension to attain a legislative end that, standing alone, in more deliberative times, would not have gotten a hearing, much less a final passage vote.

You can call that Federal financing of political campaigns, but never again call it Watergate reform. What earthly logic, in the light of the facts of Watergate, could defend giving the Federal Government more power over the people it is supposed to serve? Indeed, the practical result of this "Watergate reform" was to take away one of the checks the people have on their Government—specifically, their resources—and nationalize it.

Let me be very specific. I have no problems with the dollar limits on contributions or full disclosure and reporting or eliminating multiple committees. Those truly were reforms of problems discovered by the Watergate Committee. But I saw nothing in the fact of Watergate that indicated that the people of this Nation deserve the punishment of a Federal election financing act.

Indeed, to put the "reform" achieved in its proper light, the only candidates in the last election to receive Federal funds were the Democrats and the Republicans—and that at a time when fewer people were enrolling as Democrats or Republicans and more were staying Independent, as a proclamation of freedom from and/or their disgust with the political establishment.

Reform? For whom? It was more like a transfusion of the taxpayers' money into a politics that could not hack it on its own.

I cite the Federal financing experience as an example of reform that was not. It was the first step in nationalizing and neutralizing the individual response factor in American politics.

The second step in that nationalization is before us today. Whereas Federal financing set the criteria of eligibility for political contributions, at the common level of being a warm body, this ethics code places the criteria of who should be a Senator in the hands of the Senate.

People used to worry about Nixon perpetuating himself. If we keep legislating as we have in the past year, the American people will have deeded their resources, their judgment, and, yes, eventually their vote, to those whose incompetence, whose insensitivity, and whose intransigence created the need for reform in the first place.

What makes this whole exercise on the floor so redundant is that a system to achieve appropriate senatorial ethics already is in place. It is known as the democratic process, the election process.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. WEICKER. I yield myself 10 additional minutes.

The people who run that system are in place and are known as the American citizens.

Do we have a contribution to make as Senators? Yes. The truth. All of it.

If you put those three elements together—elections, the voters, and the facts—the job will be handled better outside this Chamber than ever could be possible for 100 men, each of whom, on this measure or its interpretation, will have at least one conflict of interest.

What is the monumental conceit that exists in this Chamber, that exists in the editorial pages of newspapers, that exist in Common Cause, that places them above the American people or the capacity of the American people to judge? The only ones who will be accountable for actions here today are the Members of this body. It certainly will not be the other entities or individuals to whom I have referred.

Seventy-four years ago, the British philosopher George Edward Moore wrote of the "difficulties and disagreements" that arise over the subject of ethics. The problems, he wrote, "are mainly due to a very simply cause: Namely, the attempt to answer questions without first discovering precisely what question it is which you desire to answer."

The U.S. Senate, now considering a new code of ethics, provides living proof of Moore's thesis. Members know full well that they must answer the public cry for stringent rules of conduct. But let us not be fooled. There are not stringent rules of conduct that we have before us. It is some disclosure and some illogical limitations. But the amendment I offer today puts to shame the proposal of the committee when it comes to disclosure. This amendment permits no exceptions from financial disclosure.

The committee plan before us is an amalgam of editorial restrictions and incomplete regulations whose only claim to the title of reform stems from its public relations value.

Please understand what the public relations impact is.

I thought the real object of all of our life's work was to leave something better than that which was given to us. In the sense of the ability of the American people to decide upon who will represent them, they are going to be left something less.

The committee proposal proclaims tough, new financial disclosure provisions for Senators and top Senate aides. But it stops well short of revealing all financial interests. No tax returns need be revealed. No specific amounts of assets or liabilities need be listed.

When the Senate and House approved the $12,900 pay raise—recommended not by the Senate and House but by an independent commission—lawmakers drew criticism. Their response was to promise "reform" and to limit the amount of a Senator's outside earned income to 15 percent of his new salary. There is no magic to the 15-percent ceiling. Even the bill's sponsors admit that it is pulled from thin air.

But some type of income limit is vital to the integrity of the institution. They argue. Senators making more than $8,625 a year giving speeches, writing books or maintaining an outside business interest might appear to be in the pocket of special interest groups or shortchanging the American people by failing to devote enough time to their Senate work.

That brings me to a very interesting proposition: What is worse, a Senator who gives 8 speeches at $1,000 a crack or one who gives 40 speeches at $200 a crack?

No consideration is given to those Senators whose profits from stocks, bonds, or family wealth far exceed the earned income of their less wealthy colleagues. In essence, this "reform" rules out outside income for less well-to-do Senators while permitting rich lawmakers to get richer.

I am not that rich, but I know where I derive my income. It comes from stocks and bonds. Why should that put me in a preferential situation? I do not understand it.

The way this bill is drafted, to be very frank, it is just about ideal in the sense of where my outside income derives. But it is not right. Would not the potential for legislative conflict of interest be greater for a Senator holding 1,000 shares of stock in a major corporation than for another lawmaker who earns $1,000 delivering a speech to an educational institution?

It seems to me that instead of scurrying around here for public favor or trying to say we did something, the Senate should consider the effectiveness and not the cosmetics of its ethical standards.

If the question of ethics hinges on a faltering public trust in its elected officials, there is one best way to restore confidence: let the American people police their own politics.

Let them go ahead and do the job. There is an inherent conflict of interest just in the fact that we are going to be policing ourselves. Give the public the facts and let the voters decide what is a conflict and what is proper.

Instead of Senators judging the propriety of their fellow Senators, give the public all the facts and let the voters decide what is a conflict and what is proper.

Mr. NELSON. Mr. President, I wonder if——

Mr. WEICKER. I am almost finished and then I will be glad to yield and respond to any questions he has on the amendment.

Senators should be required to make public every financial detail they possess through yearly publications of individual income tax returns and an itemized statement of net worth, detailing assets, liabilities, and gifts received. Every share of stock, every holding in trust, every interest payment on every loan should be offered to the voters for consideration.

The financial status of Senators' spouses and dependent children should also go public, with all the records being published in a single, easily accessible public document. If voters from a Midwestern State feel that the ownership of a farm by their Senator helps him to better understand their rural problems, why should I, from the urban Northeast, say no? Likewise, if another State's voters are outraged by their Senator's earning one nickel from a law firm, why should I say 15 percent is all right?

The wealthy already dominate the Senate's membership. Inequitable regulations based on mythical standards of financial right and wrong can only serve to increase that fact.

A no-exceptions policy of financial disclosure will insure accountable ethics rather than a muddle of self-regulation. Replacing the people's freedom to elect, and the Senators to associate, with a how-to book on honesty simply will not work.

Lay it on the table and let the people decide. Their decisions on who should serve, rather than those of Common Cause, the U.S. Senate, or the news media are still good enough for me.

I am satisfied that, given the facts, not just the right decisions, but the best decisions are made by the American people.

There is no defense in logic, there is no defense in the constitutional sense, there is no defense in fact which was presented to this body by the special committee. What will it bring for the future? That is the consideration that is so lacking from everything we have done in recent years, but it is probably the most important consideration.

You pass this and the Constitution of the United States means just a little bit less. I give to my colleagues an alternative, one which will be tough indeed, tougher than that proposed by the committee, but one which recognizes the magnificence of our political system; tries not to change it but to bring it into these times.

I yield the floor.

The PRESIDING OFFICER. Who yields time?

Mr. NELSON. Mr. President, I wonder if the Senator will yield to clarify a question. I understood the Senator to say that his disclosure would require a statement of net worth—am I not correct—although the Senator has changed the proposal to use the phrase "fair market value" instead of "net worth."

Mr. WEICKER. In response to the Senator the listing of all assets over $1,000 will be required once a year and it should be the fair market value.

Mr. NELSON. For the RECORD, to be sure about the legislative intent, would that require then that each Member hire an appraiser in order to advise the Member of what the fair market value of his assets would be?

Mr. WEICKER. That is right. There is an expense involved, but I think the expense, very frankly, in money is far better than paying it off in the coinage of the Constitution.

Yes, there is an expense involved in dollars to every Senator to do this every year, no question about it, in order to be accurate.

Mr. NELSON. So then if one bought a home, under the Senator's provision it

would not be adequate to disclose the exact amount paid for the home——

Mr. WEICKER. No.

Mr. NELSON. The mortgage, if any, held by whom, but rather each 12 months, although the house had not changed in any way except to depreciate 2 percent per year, still the Senator would require that an appraiser be hired to go out and look over the same house, on the same piece of property, to make the estimate of fair market value based solely upon the inflationary factors? Is that what the Senator is saying?

Mr. WEICKER. The Senator picked the easiest example, and on this point I really do not have to frighten my colleagues overly much because the chances are most every community in which we live does that job for us once a year; probably, in the instance, of a house that would be done by the tax assessor of the town.

Mr. NELSON. Well, I do not——

Mr. WEICKER. I am not getting off the hook with the Senator because I am saying the Senator probably could refer to some other example where it would require an appraisal every year. I am not in any manner, shape, or form implying such activity would not have to take place.

Your house example I do not think is the best example. As I said, usually that is done by a town or a municipality once every year anyway at no expense to the taxpayers except for the tax bill they have to pay.

Mr. NELSON. I am not aware of how that is accomplished in the Senator's State. I have never heard of that, however, in any of the States surrounding Wisconsin. What the assessor does in the State of Wisconsin, and those States I am familiar with, is come out and levy an assessment. The assessment might be levied at his estimate of 70 percent of value; another municipality will perhaps use another level of assessment. Some use 100 percent, some 50 percent. Why would not——

Mr. WEICKER. If it is 70 percent——

Mr. NELSON. So far as I know in most States, I would wager in most States, the assessor does not do what he apparently does——

Mr. WEICKER. It is the same in my State. But if the house is assessed at 70 percent of value it is very easy to determine what 100 percent is.

You and I are not debating the point.

Let us even take your basis that nobody does any assessment of houses, so you have to go out and get an appraiser. Yes, Senator, you have to go out and get an appraiser.

Mr. NELSON. All right.

What does that disclose of value to the public which is not disclosed to the public by the pending resolution which gives options? One may disclose the fair market value and the net value, hire an appraiser to do it, or may disclose the date of the purchase, the location of the real property, the amount paid for it, the mortgage held by whom and how much, and may disclose the current assessment. What is added in terms of information to the public of any value by placing the burden on the individual to have appraisers come out and do these things?

Mr. WEICKER. It seems to me that it definitely impacts on his economic status as to where he derives his assets. If the largest portion of his assets are real estate and he involves himself in all sorts of special favors for owners of real estate. Then, the people can make that judgment. They need those facts in hand in order to evaluate the Senator's performance. What if tomorrow, for example, there were a proposal in the Chamber which said no longer shall the interest on mortgage payments be tax deductible? Does the Senator think it would be of some importance to people to know that one Senator does not make any mortgage payments and another Senator makes huge mortgage payments? I think it is rather relevant.

Mr. NELSON. I guess I must be missing something because under the disclosure required in the resolution all the necessary evidence would be there.

Mr. WEICKER. In categories.

Mr. NELSON. No, not as to real property.

Mr. WEICKER. Yes.

Mr. NELSON. Excuse me. I am talking about real property. As to investments that are not real property, then that is a different issue. I am talking about the adequacy of reporting in this resolution which identifies the real property, its location, purchase price, date of purchase, mortgage held by whom, total amount of mortgage, or in the alternative the net worth if the Member wants to hire an appraiser. My question is why should we go through all of the burden of paying for an appraiser when all of the information respecting real property is adequately disclosed in the resolution at the desk?

Mr. WEICKER. I will concede to the Senator that which is unique to his resolution, that is, specific prohibitions on income, et cetera, but I think that the Senator will have to concede to me that, with respect to precision and total identification, the amendment at the desk far outstrips anything presented by the committee.

I am not going to sit here and get into a debate over a particular aspect of the disclosure. But just right across the board there cannot be any evasion of this disclosure provision because there is nothing one can hold back. As a matter of fact, the only concession I made to my colleagues was charitable contributions. They could lump the amount so they could not be harassed by everyone or criticized by everyone for what they did give and did not give. Also I conceded medical expenses, which will not have to be specifically identified. Those are the only concessions I made. Otherwise, our whole life is out there in the altogether as far as finances are concerned before one's constituency. That the Senator's resolution does not do. It does many things. That it does not do as mine does. By the same token, it is also true, having made that statement as far as I am concerned, I then say let the constituency decide whether something is proper or not. There is where we differ.

Mr. NELSON. There is no question but that some aspects of the Senator's amendment are more detailed than the proposal by the resolution, and there is not any question but that it would be easy to design one that is even more detailed than the resolution or the proposal the Senator makes. The question is the necessity of doing so to accomplish the purpose.

The Senator has said a few moments ago—I have forgotten his language—that his amendment "puts to shame" the pending resolution.

Mr. WEICKER. In the sense of disclosure.

Mr. NELSON. If it puts to shame the pending resolution, then the Senator from Connecticut shares the shame because the Senator from Connecticut sat on the Government Operations Committee last year and voted for the category of value concept of disclosure in this bill. So I take it that the Senator has changed his mind about the concept of category disclosure.

Mr. WEICKER. If we can set the record straight, I did not participate in the deliberations of the special committee or the votes of the special committee that brought this matter to the floor.

Mr. NELSON. I do not wish to reflect improperly upon the Senator. The Senator was a member of the committee that reported the Watergate bill which contained the categories of disclosure, was he not?

Mr. WEICKER. I was a member of the Government Operations Committee which reported the Watergate bill. That is absolutely correct.

Mr. NELSON. How did the Senator vote on the Watergate bill?

Mr. WEICKER. This is the bill encompassing the special prosecutor provisions, am I correct on that?

Mr. NELSON. Yes.

Mr. WEICKER. The Senator voted for it and also led the fight here in the Chamber for it. There is no question as to what the record was as we tried to put a group of these issues together in one package. But make no mistake about it. As I recall—and the Senator is asking me now to probe my own memory, in the committee deliberations—I think I made it rather clear that I favored a far more complete financial disclosure than that which was eventually recommended by the committee as a whole. But there is no question of the fact that I supported the bill of the Government Operations Committee as being necessary legislation. Now, however, we can go ahead and address ourselves to a specific element of that legislation; clearly the time has come to go ahead and sharpen our pencils and do a more precise job.

We do not have the special prosecutor now because it died in the House of Representatives. We do not have the Watergate reform package because it died in the Democratic House.

So, I only hope that if this is our concern, and I know it is the concern of

my colleague from Connecticut that such be the case, that we pursue reform beyond the point being discussed here in the Chamber.

Mr. RIBICOFF. Mr. President, will the Senator yield on our time?

Mr. NELSON. I yield.

Mr. RIBICOFF. The Senator from Connecticut is correct. We have introduced again the basic Watergate bill. We will hold hearings on it. The bill has a special prosecutor and the legislative counsel. Because of the pendency of the Ethics Code we sort of left a blank as to that provision that was in last year's bill, but that will have to be dealt with again.

First, let me state this: I have the highest respect for my colleague from Connecticut. He is consistent because ever since he has been in this body he has publicly disclosed his income tax returns, his assets, and his net worth. So no one can say that my colleague from Connecticut suddenly is coming in with a new idea. This has been a consistent idea of his ever since he has been in the Senate.

I agree with the Senator from Wisconsin, however, on a couple of factors. First, the junior Senator from Connecticut has fought for the confidentiality of a person's income tax return. One of the problems that bothered my colleague from Connecticut most was the invasion of privacy during the Watergate days and subsequently of those who would disclose or go into other people's income tax returns.

My feeling is that a U.S. Senator is just as entitled to the element of confidentiality of his income tax returns as any other American. There are personal factors in an income tax return as to which the Senator's amendment does not address itself. There are elements in an income tax return that are so personal that even a U.S. Senator is entitled to have them as sacred as every other citizen.

When it comes to charitable contributions, your contributions to charity should be your own. When it comes to medical expenses, there are those who have had unusually high medical expenses.

It is really private to an individual how much he is spending on medical care, the hospital bills, and the doctor bills for a loved one in his family. That is so special and so personal that every Member of this body, like every other American, pays his own bills, and assumes his own burdens.

Third, there is another factor that has not even been discussed. There are those who may make gifts to members of his family, or his children for various reasons, and there may be times that you differentiate between one son or daughter or one grandchild over another one.

If you exceed your permitted gifts, you are to disclose that in your income tax return. I do not think that it should be made public, to our children or to others.

Your income tax return has so many personal elements that I do not believe U.S. Senators, to be U.S. Senators, should have to strip themselves naked before the world or their colleagues.

I do not recall, with the probable exception of the Senator from Connecticut, any other person coming before our committee who said we should disclose our personal income tax returns. Common Cause specifically said to exclude the disclosure of income tax returns.

Mr. NELSON. Did Senator WEICKER advocate disclosure of personal income tax returns before the committee?

Mr. RIBICOFF. I do not recall whether Senator WEICKER did or not, but I know that Senator WEICKER has disclosed his income tax returns, and I know it was done sincerely, because he has been consistent in disclosing his income tax returns publicly.

Mr. NELSON. Mr. President, if I may have just a moment, I would like to point out, however, that on February 2 of this year, at the hearings of our Committee on Conduct, on page 178 of the record, Senator WEICKER testified as follows:

> I would be inclined to favor, and I know many Members of this body do it anyway, simply making public one's tax returns. But I find it a little difficult, on the one hand, to espouse the cause of tax privacy, and then apply a different standard to those in Government service.

Mr. WEICKER. Let me, if I may, respond to the correct statements of facts by both the Senator from Connecticut and the Senator from Wisconsin.

There is no question of the fact that this issue troubled me a great deal. The Senator is correct.

I think, along with him, I have been one of the leaders in the fight for tax privacy. In fact, the tax privacy provisions of the Tax Reform Act of 1976 were a result of work by Representative Litton of Missouri, and myself.

That was a result of 3 years of work; and finally, as a result of a compromise, a portion of our work went into that act.

Yes, I strongly believe in total tax privacy. That was one of the reforms that came out of Watergate, to be sure that the Internal Revenue Service did not become a lending library to every institution of Government.

Ordinarly, I would not demand something of ourselves as Senators that I would not demand of the American people; but I believe extraordinary times call for extraordinary measures. I would be willing to pay the price, myself, in terms of loss of privacy, as far as I am concerned, and I believe other Senators would, rather than pay it in terms of damage to the Constitution of the United States, which belongs to everyone.

I recognize full well this is totally opposite to what I have fought for and stood for as far as tax privacy for everyone is concerned, but frankly, if that is what is required to overcome a monstrous piece of demagoguery which does constitutional damage, I believe I should be willing to pay the price, and I believe everyone here should be.

It is difficult for me to be debating this issue with my colleague from Connecticut, who has probably been the strongest advocate of the positions I have held. If it were not for the power of seniority which he holds, all the Watergate issues would have died two years ago. Nobody would have been interested. In terms of reform, this legislation does not do the job. But it is true that I am being inconsistent on the matter of tax privacy.

Mr. RIBICOFF. Mr. President, the Senator is not inconsistent, because what he is doing is completely consistent. It is true, as the Senator indicated, that the public has the right, on election day, to make a determination and they do. Frankly, I do not think any of this is necessary. I do not like this whole measure. I do not think there is any necessity for the rules that we have now adopted. I am involved in it, and I am for it, by a set of circumstances.

When I succeeded Senator Ervin to the chairmanship of the Governmental Affairs Committee, I was obligated to fight for Senator Ervin's Watergate bill. My colleague from Connecticut was the outstanding fighter for the Watergate bill. I bow to him on the leadership on that measure.

The Ervin bill provided for rules and regulations for the executive branch. I felt that was unfair, that if we were going to have rules and regulations for the executive branch, Congress had to have the same rules and regulations for itself and the judicial branch.

We put in the second Watergate bill—at that time it was at my insistence, and I was helped and supported by the entire committee—that we have uniform rules and regulations for the legislative and judicial branches and I would hope that after we finish with the rule we have before us we will address ourselves statutorily to a series of rules and regulations that will be similar for all three branches of the Government.

The second phase: When it came to the Nelson proposal, I believe the Senator from Connecticut is right, that we should not tie ethics to our pay raise. But here again, we have been the beneficiaries of a pay raise, and there is an implied obligation to comply with the pronouncements of the Peterson commission, President Ford, and President Carter. The Peterson commission and the two Presidents indicated to the Senate and to the House of Representatives that they would recommend that the pay raise be adopted, based on the proviso that there be an ethics code.

I voted for the pay raise, and a majority of the Senate voted for the pay raise. A majority of Senators have accepted the pay raise. So there is an implied obligation, under those circumstances, to try to have a fair ethics code.

Now another problem: When it came to the listing of assets, it is very easy to list our assets and their value if we are holding stocks listed on the New York Stock Exchange, or municipal bonds; that can be found in the quotations, every day, in the Wall Street Journal.

But there are many interests that do not lend themselves to such precision. A person may have an interest in a family business, and there is no reason for the family to go out and appraise its assets. A man may own a farm of 300 acres that he bought 25 years ago, and we all know how

farm land increases in value every year. I do not know what it would cost to appraise a farm and its assets every year. but a substantial sum.

A person may have a small interest in a large piece of real estate. To determine the exact value of his interest, he would have to have appraised every year the entire value of that piece of real estate. Those who own the other 98 percent interest in that real estate are not interested in an annual appraisal, so the Senator would have to bear the burden of, perhaps, a large appraisal every year, to find out what his 2 percent is worth.

Then we have another problem. If you are willing to strip yourself naked and say, "This is what I am worth," if you are willing to get that large appraisal every year, at the same time you are disclosing the value of the other 98 percent interest, and the holders of that interest are not Members of the U.S. Senate.

So these were factors the committee took into account in trying to arrive at a sense of fairness and a sense of complete disclosure. I think we adopted it on the basis of categories. The categories were recommended by the American Bar Association, by Common Cause, by the Obey commission, and by President Carter for the executive branch, and the Senate has followed the measurement that has been adopted by the other various groups.

Mr. NELSON. Will the Senator yield at that point?

Mr. RIBICOFF. Yes.

Mr. NELSON. Ours is in more detail than that of the House side or the Carter suggestion.

Mr. RIBICOFF. That is correct. And many more categories are involved.

There are those who say, "You are not precise," but we were very careful in this rule to specifically state as an alternative a Member had to list a description of the property, the date acquired, and the amount paid for it. That had to be filed with the Secretary of the Senate, with a copy to be filed with the Secretary of State in the Member's own State. As a consequence, any newspaper, any investigative reporter, any opponent or any citizens of this country or State has the right to hire his own appraiser. If a person does not believe in the Member's figures and is nosy enough and curious enough to know what the value is—and—if that person wants to hire an appraiser at his own expense to determine the value, he is at liberty to do so. Any intelligent person can walk down the street and see the property and make his determination of the comparable value.

I do believe that the committee, in its rules, in its disclosure, has made available a requirement that we list all assets, personal and real, with a value over $1,000, in such a way that it is open to the public, open to the press, and open to any opponent.

I have the highest respect for my colleague. as my colleague knows. My colleague has taken one road on the question of disclosure and I have taken another. The people in the State of Connecticut elect my colleague overwhelmingly as a Republican and they do pretty well by me as a Democrat. So the voters have a good way of appraising their respective Senators. The voters know who their Senators are.

The series of rules and regulations may not be perfect.

I would hope, while the minority leader is here though I do not see the majority leader, that the minority leader and the majority leader, before we are through with this rule, will come to an understanding for some committee of this body to have the duty and obligation to look further at this rule.

There are questions that many Senators legitimately raise. There are many problems which are raised. We do not have all the answers. We had a few weeks to try to come up with a measure. It is my prediction that the House and the Preyer committee will come out with a legislative proposal. This body should have a group of Senators, either a standing committee or a special committee, go into the entire problem of disclosure, the entire problem of rules and regulations, and the entire problem of ethics in much more detail.

I see the Senator from Missouri is present.

A group of Senators have raised the question of blind trusts. That is a legitimate question they raise. I think under those circumstances there should be a committee in Congress to look at the problems of blind trust.

I believe the Senator from Wisconsin will be the first to state that we did not have enough time to come up with all the answers. I believe 100 Senators have raised specific problems. The Senator from Maine has raised a question concerning staff, and he is absolutely right. I know the Senator from Wisconsin will be adopting perfecting amendments.

I do hope, before we vote this through finally, the Senator from Tennessee and the Senator from West Virginia will address themselves to trying to firm up this rule, to come up with an understanding, to have some statutory proposals which will apply equally to the Senate, the House, the executive branch, and the judicial branch. I believe we have the obligation to do so.

Mr. BAKER. Mr. President, will the Senator yield?

Mr. RIBICOFF. I yield.

Mr. BAKER. Mr. President, I assure the distinguished senior Senator from Connecticut that I share his views.

The PRESIDING OFFICER. On whose time does the Senator yield? Does the Senator from Wisconsin yield?

Mr. NELSON. May this Senator inquire as to how much time remains for each side?

The PRESIDING OFFICER. The Senator from Wisconsin has 13 minutes remaining and the Senator from Connecticut has 10 minutes remaining.

Mr. BAKER. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. BAKER. Can I yield myself 1 minute on the resolution?

The PRESIDING OFFICER. The Senator from Tennessee has the right to yield time from the resolution.

Mr. BAKER. Mr. President, I yield myself 1 minute.

The PRESIDING OFFICER. The Senator from Tennessee.

Mr. BAKER. Mr. President, I commend the distinguished senior Senator from Connecticut for his remarks. I assure him that the points are well taken. It will be my intention to follow up on his suggestion. As he may know, and others know, I have a printed amendment at the desk which is calculated to be an action-forcing amendment. It is simply to provide that at the end of 3 years we must once again focus our attention on this entire code of ethics. It is imperfect.

I believe we all owe a debt of gratitude to the distinguished Senator from Connecticut, the Senator from Wisconsin, the Senator from South Carolina, and others who worked so hard to bring forth this resolution.

Mr. RIBICOFF. I would hope the minority leader would not call up the sunset legislation because I do not believe, if we have a rule, we ought to have a termination date on the rule. If we are to have a rule, it should be subject to permanent statutory legislation. I believe that is the way to address it, by having the Congress focus on the rules and regulations applying equally to the executive, judicial, and legislative branches. Then we will have fairness throughout the entire Government.

Mr. BAKER. Mr. President, I yield myself 1 more minute. There will be time for this debate later.

The Senator from Connecticut might know that my reason for introducing the sunset amendment, which I will call up later, is in part to force action for a review of this matter and in part to make us face up to the fact that we are heading, I think, in the wrong direction. We should have this code of ethics at this time, or something like it. While I will support it, I want to give further attention to how we regain and recapture the status of citizen legislators, with a full disclosure of our incomes and assets, much along the lines described by the junior Senator from Connecticut. I think this is not the time to debate that issue at length. I am realistic enough to know that this concept will not be fully addressed in this debate. I will call up the sunset amendment later to try to force us to focus on that broader issue at a later time.

Mr. WEICKER. Mr. President, I yield myself 3 minutes.

Let me say that I would hope that the proposition of the distinguished Senator from Tennessee is passed. I will say why. Throughout this debate I have heard my distinguished colleague say very frankly the whole matter is unfortunate, in the sense of the legislation being raised here and that he would prefer to go some other route. I have heard from others of my

colleagues that we did not have enough time or that it may be an imperfect time.

We sat here and listened to the distinguished Senator from Maine who had every fact on his side, every piece of logic on his side, and it did not make any difference. He was rolled over.

Let us be candid as to what is going on here. There are some image-conscious people—and I do not refer to my colleague from Connecticut or the Senator from Wisconsin—some image-conscious leaders, who feel that somehow or other this is a must in order to bring distinction upon their heads and that of their party.

The passage of this legislation has nothing to do with fact. It has nothing to do with logic. It has nothing to do with time spent. It has nothing to do with reform.

That is the tragedy of the matter. As I said, if it just came down on our heads, if we made a bummer and that was it as far as each one of us was concerned, I would not care. But we are paying in the coinage of the Constitution and that does not belong to each one of us. It belongs to everybody.

Let us not get the impression that I am offering opposition to ethics. My amendment at the desk is tougher than the ethics bill. The only difference between my amendment and the proposal of the Senator from Wisconsin is that my amendment is tougher on each of us, on all of us. The committee bill is tougher on some Senators and all Americans. That is the difference. It is not the mater of ethics or what is to be achieved.

I just feel, very frankly, that it is obviously our omissions or commissions that have brought us to this state and we ought to pay—not our kids and not the system. It is a good system. It is a great Constitution, and the people are bloody well intelligent. We are the ones that are the idiots. We prove it every minute that goes by in this legislation.

I yield the floor.

The PRESIDING OFFICER (Mr. HOLLINGS). Who yields time?

Mr. NELSON. Mr. President, how much time does the Senator from Wisconsin have?

The PRESIDING OFFICER. Thirteen minutes.

Mr. NELSON. I yield myself 4 minutes.

Mr. President, I have looked over the proposal by the distinguished junior Senator from Connecticut and looked over the one of the committee. Each one of them has something to recommend it. They both are comprehensive disclosures. In this Senator's judgment, contrary to the judgment of the Senator from Connecticut, his disclosure measure performs no useful function beyond what the resolution does in many respects. In this Senator's judgment, it is not as good. Nevertheless, they are both comprehensive disclosures.

It does not matter to me personally if the requirement were that we listed everything. I issue a statement each year, identifying everything I own. It does not include any stock. Tax returns in the State of Wisconsin have had total or partial disclosure for over a half century. It is the only State in the Union which, from the time of old John Blaine in the 1920's, required a disclosure of not only the legislators' returns, but any citizen could go to the tax department, pay $2, and ask for the tax return of every corporation and every individual in the State of Wisconsin and look over the whole batch. I led the fight in 1955 against the Republican leadership in the State Senate of Wisconsin when they decided to knock out the income tax disclosure in the State of Wisconsin. They won a substantial victory, but we were able to preserve the right of an individual, which still exists, to go to the tax department, pay his $2, take any one of the 1 million or million and a half taxpayers, name them, and ask to see how much in taxes they paid. If you want to see how much a corporation or a partnership paid, name them, pay your $2, and in the State of Wisconsin, you have it.

I am not opposed to that. I think that is fine. What you owe to the Government is public money, not private money. Taxes are public money. I would be perfectly happy with that.

Then the tax department lets you know. You fill out a postcard and they send you a card and say that Mr. Jones, representing the Milwaukee Sentinel or the Journal or something else, has looked at your tax returns. I get two or three of those a year. I always jot them a little note saying, "I will give you the whole return, if you want it. All you got was how much taxes I paid."

How much time is left?

The PRESIDING OFFICER. The Senator has 9 minutes.

Mr. NELSON. I yield myself 2 more minutes.

I would be happy to do that, but I do not think it serves any necessary purpose to disclose medical payments or contributions to the church and I do not think it offers a disclosure of any realistic value. Disclosure in the way that we have done it in the resolution is much better and gives much more information than disclosure of somebody's tax returns. So I did not argue for the disclosure of tax returns, even though I do it myself and I understand that the Senator from Connecticut does, too.

Both of these measures have comprehensive disclosure. I repeat what the senior Senator from Connecticut said, and I think it ought to be of interest to people, that the Carter administration uses categories of disclosure for investments—not as detailed as this committee. The House used categories of disclosure, not as detailed as this committee. And would you believe it? We have the junior Senator from Connecticut out in the far left from Common Cause, which has endorsed the category of disclosure. I do not use that name to say they are right or wrong, but I think the RECORD ought to show that we went as far as Common Cause. That looked to me like far enough. Then we have the junior Senator from Connecticut, who wants to go out to the far left of Common Cause. I think we have gone far enough, though I disclose it all myself, anyway, personally. If anybody wants to disclose more, they are entitled.

Mr. WEICKER. I yield myself 1 minute.

As a matter of tactics as to why I go all the way, I learned a long time ago on the tennis court, either stay on the baseline or go to the net; do not get caught in the middle court. That is why, right now, I go to the net as far as you people are concerned.

I repeat, on this matter, that what is at issue here is who should make the decisions. That is what it really boils down to. I pose the question to the distinguished Senator from Wisconsin or the distinguished senior Senator from Connecticut: what is wrong, if the American people are given all the facts without exception—and I think we all agree we do have a system of judgment known as free elections—why, and I shall be glad to yield a minute to each, should not the American people, at the polls, make the judgment as to what is proper or what is not proper as far as their Senator or Representative is concerned? Why should they not make it? Why should it be made in this body,

The PRESIDING OFFICER. The 1 minute has expired.

Mr. WEICKER. I shall be glad to yield a minute to each of the gentleman to describe why they are not competent to make the decision.

The PRESIDING OFFICER. Who yields time?

Mr. WEICKER. I shall yield 1 minute of my time to either the Senator from Wisconsin or the senior Senator from Connecticut.

Mr. THURMOND addressed the Chair.

Mr. WEICKER. I yield the floor.

Mr. NELSON. How much time does the Senator from Wisconsin have?

The PRESIDING OFFICER. Seven minutes remain.

Mr. NELSON. I yield 4 minutes to the Senator from South Carolina.

Mr. THURMOND. Mr. President, I rise in opposition to this amendment. The Senator from Connecticut is a very able man and a very distinguished Senator and has presented arguments here that appear very convincing. We might see exactly what this amendment does.

First, it changes the prohibition on practice of a profession for compensation. The Members are excepted and the staff can obtain waivers. That means that Members of the Senate who prepared this amendment can go out and practice law, practice medicine, practice any profession he wants to, and gain as much from it as he is able to obtain.

Next, it strikes the rule on gifts. That is one thing that is embodied in this code of ethics that we think is some limitation on gifts.

It strikes outside earned income, the 15-percent limitation. The Senate already voted on that yesterday, I believe, 62 to 35. So that issue really goes out.

It changes the disclosure rules. In other words, it would bring up the fair market value each year. If you own a piece of property, real or personal, you have to have it appraised each year. You

have to go through a lot of redtape, you have to hire appraisers. I think that is putting the Members of the Senate to entirely too much trouble, to have to have a fair market appraisal each year.

It also requires additional information from the tax return to be disclosed in the value of both personal and real property.

Mr. President, I oppose this amendment because it eliminates the ban on outside practice of professions by the Senators. That is one of the things at the very heart and core of this code, one of the principles of it. It eliminates the 15-percent limit on outside earned income, which the Senate supported, as I said, only yesterday.

It provides for unnecessary invasion of personal privacy by requiring income tax information of a personal and family nature; namely, the medical and charitable deductions by exact amounts. I do not think it is necessary to expose all the charitable deductions and medical deductions and the kind of treatment a man's wife has received or his children have received, or go into personal things of that kind. I think that is a mistake.

The Weicker amendment has great appeal on first glance, but I feel the approach is entirely too broad.

There are problems in the bill which should be resolved individually and not with a meat-ax approach. This amendment is so broad, it is what I would consider a meat-ax approach. It not only takes in matters we have already acted upon, it takes in new matters, it takes in personal matters, it takes in family matters.

I feel it would be a mistake, and I will move to table the amendment when the time comes.

The PRESIDING OFFICER. Who yields time?

Mr. WEICKER. Mr. President, I yield myself 1 minute.

Mr. President, does there seem to be some problem as to whether I should have an up or down vote on this question, or is there some parliamentary maneuver in order to prevent going on record on this matter?

Mr. THURMOND. Mr. President, I withdraw that if the Senator wants a direct vote.

Mr. WEICKER. I appreciate the courtesy of the Senator.

Mr. President, I yield myself 1 minute.

Yes, this amendment would enable a Senator to do anything, but whether a Senator can get away with doing anything, that is the question.

Darn right, it is a meat ax when it comes to disclosure. It is tough, no exceptions disclosure. That is the price we pay in order to be able to do anything.

Having done anything and our constituents knowing about it, they will make the decision as to what is proper and what is not proper, which seems to me to be a rather fair concept of my amendment.

I am surprised at the Senator from South Carolina, who is a great "States righter." If there was ever a States rights amendment this is it. It says that Arizona can apply their standards to their Senators, and South Carolina, Michigan, Maine to theirs. The Senate is nationalizing public perceptions as to what is right and what is wrong.

I yield the floor, Mr. President.

The PRESIDING OFFICER. Who yields time?

Mr. NELSON. How much time is remaining to the Senator from Wisconsin?

Mr. WEICKER. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. Who yields time?

Mr. BARTLETT. Would the Senator yield for a unanimous-consent request?

Mr. NELSON. Yes; I yield.

Mr. BARTLETT. Mr. President, I ask unanimous consent that Joe Heaton of my staff be granted privilege of the floor during the consideration of this matter.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. NELSON. Is all debate concluded by anyone who wishes time?

Mr. WEICKER. Mr. President, I yield myself 1 minute.

One last aspect to what it is I propose to my colleagues. Can we imagine the cost in personnel and administration of this ethics code? As I say, it is redundant but the machinery is already in place. The election process.

What I propose requires nothing in the way of time, or personnel, except our own time, our own integrity, and, yes, we might have to get our own appraisal. But it will not cost the taxpayers a cent.

On the other hand, for the proposition before us here, the personnel required to properly enforce it if, indeed, it is going to be properly enforced, the budget required will be in the hundreds of thousands of dollars.

There is no doubt, when we come back a year from now, as to what the request of the Ethics Committee—of which I am going to be a member—will consist of.

I just point out, aside from all principles that have been argued back and forth, in a day of reorganization and cutting back on Government size, why we want to go ahead and raise the necessity for additional committees, agencies, and personnel. Lord only knows. There is about as much logic to that as there is to the legislation itself.

I have nothing further to say, Mr. President. If the distinguished Senator from Wisconsin wishes to yield back his time, I am.

Mr. NELSON. I am prepared to yield back my time.

Mr. GOLDWATER. Will the Senator yield?

Mr. WEICKER. I yield 1 minute to the Senator from Arizona.

Mr. GOLDWATER. Mr. President, it had been my hope when this legislation was first discussed to be able to vote for it. In fact, I notified the members of Common Cause in Arizona that I would.

When I saw the disclosure requirements of this legislation, I could not on good conscience vote for it because I think there is more chicanery possible under the disclosure requirements of this bill than we imagine.

I made a complete disclosure the other day and, frankly, I have not heard any response to it one way or the other.

I think this way of submitting our income tax report to the Senate to be published in the RECORD is the only fair way and it is the only honest way, and I intend to do that.

I will support the Senator from Connecticut on his proposal.

The PRESIDING OFFICER. Who yields time?

Mr. WEICKER. I yield 1 minute to the distinguished Senator from New Mexico.

Mr. SCHMITT. Mr. President, I wish to commend the Senator from Connecticut for his efforts today. I associate myself with almost the entire nature and thrust of his remarks.

As the ranking member on the Ethics Committee, I am looking forward to working with the Senator on this matter. However, I am not looking forward to the job we will have to do.

I think the resolution before us is going to be very difficult to administer and does, in fact, fly in the face of what I think this Government should be now and in the future.

I will support his amendment. I would possibly, if it were successful, and I have no such illusion, suggest that we might modify the tax disclosure provisions—and I will have such an amendment to that effect later—so that it just includes the major items of the tax, rather than the personal aspects of it.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. WEICKER. Do I have 1 more more minute?

The PRESIDING OFFICER. One minute remaining.

Mr. WEICKER. I yield 1 minute to the distinguished Senator.

Mr. SCHMITT. I merely conclude by saying that I hope the Senate will reach into our consciences and think once again about what we are about to do and support the distinguished Senator's amendment.

The PRESIDING OFFICER. All time having been used or yielded back——

Mr. NELSON. Mr. President, I move to table the substitute amendment.

Mr. WEICKER. Well, could I be yielded a minute?

I thought I had assurances this was going to an up or down vote.

Mr. RIBICOFF. Mr. President, I hope we could accord my colleague an up or down vote.

But the Senator is the manager of the bill.

The PRESIDING OFFICER. Does the Senator insist on his motion?

Mr. NELSON. I ask unanimous consent for 1 minute.

The PRESIDING OFFICER. Without objection, it is so ordered.

The Senator from Wisconsin.

Mr. NELSON. Mr. President, I did not understand there was any objection to tabling amendments here.

If the Senator wants an up or down

vote, I will do half of it. I will give him a down vote.

I withdraw the motion to table.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Connecticut. The yeas and nays have been ordered and the clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. CRANSTON. I announce that the Senator from Minnesota (Mr. ANDERSON), is necessarily absent.

I further announce that the Senator from Alaska (Mr. GRAVEL) and the Senator from Idaho (Mr. CHURCH) are absent on official business.

The result was announced—yeas 30, nays 67, as follows:

[Rollcall Vote No. 66 Leg.]

YEAS—30

Abourezk	Hatch	Percy
Baker	Hatfield	Roth
Bartlett	Helms	Sasser
Bayh	Laxalt	Schmitt
Curtis	Lugar	Scott
Danforth	McClure	Stevens
Dole	McGovern	Tower
Garn	Moynihan	Weicker
Goldwater	Muskie	Williams
Hansen	Packwood	Young

NAYS—67

Allen	Glenn	Metcalf
Bellmon	Griffin	Metzenbaum
Bentsen	Hart	Morgan
Biden	Haskell	Nelson
Brooke	Hathaway	Nunn
Bumpers	Hayakawa	Pearson
Burdick	Heinz	Pell
Byrd, Harry F., Jr.	Hollings	Proxmire
	Huddleston	Randolph
Byrd, Robert C.	Humphrey	Ribicoff
Cannon	Inouye	Riegle
Case	Jackson	Sarbanes
Chafee	Javits	Schweiker
Chiles	Johnston	Sparkman
Clark	Kennedy	Stafford
Cranston	Leahy	Stennis
Culver	Long	Stevenson
DeConcini	Magnuson	Stone
Domenici	Mathias	Talmadge
Durkin	Matsunaga	Thurmond
Eagleton	McClellan	Wallop
Eastland	McIntyre	Zorinsky
Ford	Melcher	

NOT VOTING—3

Anderson	Church	Gravel

So Mr. WEICKER's amendment was rejected.

Mr. NELSON. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. THURMOND. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

UP AMENDMENT NO. 86

The PRESIDING OFFICER. Under the previous order, the Senator from Oklahoma (Mr. BARTLETT) is recognized to call up his amendment. There is a time limitation of 80 minutes of debate equally divided between the Senator from Oklahoma and the Senator from Wisconsin.

The Senator from Oklahoma is recognized.

Mr. BARTLETT. Mr. President, I have my amendment which I sent to the desk.

The PRESIDING OFFICER. Let us have order. The Senator from Oklahoma has the floor.

The clerk will report.

The assistant legislative clerk proceeded to read the amendment.

Mr. NELSON. Mr. President, the Senate is not in order. The Senator from Oklahoma has a very important proposal, and I think everybody ought to listen to it. Those who do not want to listen to it ought to go to the cloakroom.

The PRESIDING OFFICER. Let us have order. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Oklahoma (Mr. BARTLETT) proposes an unprinted amendment No. 86.

Mr. BARTLETT. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

SEC. 101, rule XLII, paragraph 3, subparagraph (d), clause (1), is amended to read as follows:

"(d)(1) The holdings of and income from a trust or other financial arrangement, whether 'blind' or not, whether or not created by or under the control of the reporting Senator, officer, or employee or the spouse or dependents of such reporting individual must be publicly reported according to the provisions of paragraph 2, except that the identity of the holdings and the sources of a trust's income need not be disclosed if—

"(A)(i) the trust was not created directly or indirectly by the reporting individual, his spouse, or dependents,

"(ii) the reporting individual, his spouse, and dependents have no knowledge of the contents or sources of income of the trust, and

"(iii) the reporting individual has requested the trustee to provide information with respect to the holdings and sources of income of the trust and the trustee refuses to disclose the information, or

"(B) the trust is a 'publicly disclosed blind trust' as defined in paragraph 7 of this rule. However, where the identity of the holdings and the sources of income of a trust need not be disclosed, the reporting individual must list the category of the net cash value of his interest in the total trust holdings under subparagraph (e) of paragraph 2, and must list the category of the amount of the income from the trust under subparagraph (a)(3) of paragraph 2.".

Section 101, rule XLII, paragraph 3, subparagraph (d), subclause (2), is amended by deleting the period at the end thereof and adding the following language: "unless such **trust qualifies as a 'publicly disclosed blind trust' as defined in paragraph 7 of this** rule.".

Section 101, rule XLII, paragraph 7, is amended by adding a new subparagraph, appropriately designated, as follows:

"( ) the term 'publicly disclosed blind trust' means a trust (1) the terms of which, other than those of a testamentary nature, are fully disclosed and made a matter of public record by filing a copy of the trust agreement with the Secretary of the Senate and, in the case of a Senator, by publication in the Congressional Record, (2) which is by **its terms irrevocable by the reporting individual** for the term of the reporting individual's government service, (3) the original contents of which are disclosed by source and amount at the time of its creation or within sixty calendar days of the date upon which this portion of the rule takes effect, (4) to which the assets transferred are either in cash or are diversified, (5) the trustee of which is truly outside the direct or indirect control of the reporting individual and is preferably a corporate trustee, (6) the terms of which afford the trustee full discretion, subject to accepted standards of fiduciary responsibility, in investing the contents of the trust without discussion or consultation with the person creating it: Provided, That the trust agreement may specify narrow categories of assets in which the trust principal shall not be invested, (7) which specifies by its terms that neither the contents nor the sources of income of the trust may be disclosed to the reporting individual, his spouse or dependents at any time during the term of the reporting individual's government service: Provided, however, That the trustee may disclose the net cash value of the trust and the aggregate income therefrom, (8) in connection with which both the reporting individual and his trustee have submitted to the Secretary of the Senate sworn affidavits stating, respectively, that the reporting individual has no knowledge of the contents or sources of income of the trust and that the trustee has not disclosed and will not disclose the contents or sources of income of the trust to the reporting individual, and (9) which has been reviewed by the Ethics Committee and found to be in compliance with the standards set out in this subparagraph.".

Amend Title II of the resolution by adding the following paragraph immediately following the language ending on line 13, page 49, of the resolution:

"(8) The Ethics Committee shall periodically review the form and operation of any 'publicly disclosed blind trust' authorized by Rule XLII to insure that such trust complies with the conditions for such a trust. It shall be empowered to establish guidelines setting out the necessary degree of diversity to be required of assets put into any publicly disclosed blind trust, it being the sense of the Senate that no single asset or business should comprise a substantial portion of the trust principal.".

Amend Title III of the resolution by adding a new section, appropriately numbered, as follows:

"Sec. —. (1) The Committee on Rules and Administration shall review the desirability of the provisions of Rule XLII regarding 'publicly disclosed blind trusts'. The Committee shall report its recommendations and the results of its review within 180 days after the day on which this section is adopted.

"(2) In the event that the report referred to in the previous subsection includes a recommendation that Rule XLII be amended to require a turnover of assets within a trust covered by the rule, such recommendation shall be referred to the Finance Committee for a study of the potential tax consequences of such a rule. The Finance Committee shall report the results of its review, together with its recommendations, to the Senate within sixty days of the date upon which the matter was referred to the Finance Committee.".

Mr. BARTLETT. Mr. President, I have a modification that I would like to incorporate with my amendment, and I will explain, Mr. President, that this amendment is identical with my printed amendment No. 119, with, however, several changes.

There are three technical amendments which I would be happy to discuss in some detail, and then a general amendment which broadens the scope of the study that is mandated in the amendment so as to entail a general review of the blind trust concept.

The language in the amendment otherwise only covers a study of an asset turnover requirement.

Then I also included an amendment that was suggested to me that recognizes

that some trusts are testamentary in nature, and that testamentary provisions for the disposition of property on the reporting individual's death at his death are of no legitimate public interest; hence, such provisions need not be disclosed.

Mr. President, I ask unanimous consent that Mr. Chris Brewster of Senator DANFORTH's staff be accorded the privileges of the floor during the consideration and vote on this bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BARTLETT. Mr. President, this amendment is designed to improve and strengthen the provisions of the code in dealing with real or potential conflicts of interest. The present language of the resolution relies solely on full disclosure as the means of dealing with such conflicts. It seems to me that this method has some severe limitations.

The most obvious limitation is that full disclosure does not necessarily eliminate conflicts of interest, but merely publicizes them. In many cases, that may be a sufficient incentive for Members to eliminate conflicts of interest on their own. However, for Members who have a large number of investments in a diversified range of companies or concerns, it will be virtually impossible to eliminate conflicts of interest and still maintain a program of sound investments.

Mr. President, this amendment would provide a means for avoiding the dilemma I have just mentioned. It would do so by providing that a properly drawn, bona fide blind trust, one that the contents of which would be publicly disclosed at the very beginning of the trust, could be used in lieu of the full disclosure provisions of the code that would otherwise apply. I fully understand the Nelson committee's reluctance to allow utilization of blind trusts to eliminate conflicts of interest. I know that so-called blind trusts have been used by some, particularly in the executive branch, when there was in fact nothing blind about them.

I know too that it is not necessarily an easy chore to draw the line between what is a true blind trust and what is not. However, I am convinced that a bonafide blind trust can be created and does offer a highly superior means of dealing with conflicts of interest. As the Washington Post noted a couple of days ago in an editorial, a "super-strict ethics code would require" the use of blind trusts. I do not suggest that blind trusts should be required of Members, but I do believe they should be available as a means of avoiding conflicts of interest for Members of the Senate.

In order that my thinking might be clear on this to Senators, let me explore some of the aspects of this whole matter.

The main thrust of the disclosure section of the ethics resolution is to minimize or eliminate the conflicts of interest that a Senator would have.

I was faced, as a number of Senators have been, upon election to the Senate with what I saw as real conflicts of interest with my own investments.

Because of this, I took some actions in the early part of 1973, shortly after I was elected to the Senate, and I made a release, which I have here, to the press which I wish to have printed in its entirety in the RECORD, and I ask unanimous consent to do so.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

STATEMENT OF DEWEY F. BARTLETT

My wife, Ann, and I have placed all of our stocks and bonds in blind irrevocable trusts and I have completed arrangements for the sale of my approximate one-third interest in Keener Oil Company, a family company, to the other Keener owners, the major share of which is owned by my brother, David Bartlett. My children, all adults, have a minor interest.

These steps are being taken in order to eliminate all possible conflicts with my responsibility to the people of Oklahoma as a United States Senator.

The trusts will be managed by the National Bank of Tulsa which will make its own investment decisions. Ann and I will not be aware of the companies in which the trusts make investments. The trusts will continue as long as I am a United States Senator.

The Keener sale is subject to a ruling from the Internal Revenue Service on the tax consequences and will not be completed until a ruling is received.

(The sale price of the Keener interest was based upon an independent appraisal by a recognized consulting firm.)

The people of Oklahoma are entitled to know that I will not benefit financially by any votes or positions I may take as their Senator. I believe the energy crisis facing this nation is important to all our people and to Oklahomans in particular. I want to avoid even the appearance of self-interests in fighting for what Oklahomans believe.

In addition to the Keener sale and creation of the blind trusts, Ann and I have done the following:

(1) made arrangement, on the date of the sale of my Keener interest, to tender my resignation as trustee for my children under my mother's will, regarding their Keener partnership interests; (2) Ann and I sold all oil company stocks which we owned; (3) prohibited the trustee from buying or selling oil or gas company securities; (4) disposed of my interest in International Breeder Services, Inc. to my children.

Any real estate which Ann and I own, including the Delaware County farm, is not being placed in the trust.

I pledge to never repurchase any interest in Keener Oil. Further, I will not purchase any petroleum interest for at least two years after my service in the Senate has terminated.

I will disclose to the Press at least annually any bank loans or other borrowings with the names of the lenders, the terms thereof, and any significant changes or additions in any real estate holding which are outside the blind trust and residence.

When the Keener sale is completed, I plan to place the proceeds, less the amount necessary to pay taxes, in my blind trust.

BARTLETT REAL PROPERTY

(1) 80 acres described as E/2 NW/4 of Section 18–18N–14E. Purchased October 8, 1958.

(2) 120 Acres described as S/2 SW/4 and S/2 N/2 and SW/4 of Section 8–18N–14E. Purchased May 6, 1959.

(3) 1500 acre farm and home in Delaware County.

(4) Residence in Washington, D.C.

BARTLETT BUSINESS OBLIGATIONS

(1) Notes on farm in Delaware County:

(a) Owe W. C. Gunter $2100 at 5 percent. 4 payments made, final payment July 25, 1973.

(b) Owe R. H. Adams Estate 21,300 at 5 percent interest, 4 payments made, 6 payments remaining.

(c) Owe Mrs. R. H. Adams $21,300 at 5 percent interest. 4 payments made, 6 remaining.

Mr. BARTLETT. I was faced with conflict of interest because of my ownership of an interest in a family oil company, and coming from an oil State I knew that it would not suffice for me to just recognize that one conflict of interest and then avoid voting on matters that pertained to energy, oil, or gas. I recognized it was essential for me to go beyond that because I obviously wanted to represent my State in these matters.

So, I disposed of my interest in the family oil company. Then I sold oil stocks which I owned. My wife and I created blind trusts in which we put the investments we then had, and later I put into the blind trust cash that was derived from the sale of the family company oil stock.

It was an irrevocable trust, one managed by the National Bank of Tulsa, in Tulsa, Okla., one that was truly blind and one in which I do not know the contents.

In the press release I listed the number of shares and the names of the stocks that went into the blind trust. I also listed for public perusal all the real property that I own and also the three loans that were outstanding on that property.

In addition to the sale and the creation of the blind trust, I resigned as trustee for my children under my mother's will because this affected the oil company interest, and I prohibited the trustee from buying and hence selling oil interests or buying or selling oil company investments. I also disposed of another

investment that I had which I thought might create a conflict of interest.

In addition to this, I pledged to never repurchase any of the family oil stock or oil interest. I also stated at that time that for 2 years after leaving the Senate I would not purchase any petroleum interest.

The reason I am going into this is that I felt as one individual I not only had a conflict of interest, a rather major one as far as oil ownership was concerned—not major in dollar value, but major in conflict of interest for myself—but, in addition to that, I felt that investment in other stocks that I had would also create from time to time conflicts of interest, as I would be wanting to vote on various issues before Congress.

When you consider what goes into an average portfolio of stocks, so much in oil, so much in motors, so much in chemicals and so much in whatever, I think you can very quickly come to the conclusion that any person who has investments in such a portfolio is going to be very busy in spending a lot of his time with full disclosure, trying to decide just exactly where he has and where he may not have conflicts of interest. But I think conflicts of interest are going to occur, and I think that this resolution should provide a mechanism by which a person could protect himself from conflicts of interest.

If it is the desire of the Senate to have an ethics resolution which would, without actually saying so, force a person with investments not to invest in common stocks in usual investments, then that would be one thing. Perhaps he could invest in Government bonds, and there would not be a conflict of interest there.

But I am maintaining that this resolution does not eliminate conflicts of interest. It publicizes them, and in publicizing them I recognize it creates pressure for the individual who has the conflict of interest to sell his investments. But, on the other hand, what does that person buy in place of what he might sell? Or what can he invest in?

There is nothing in the nature of public disclosure that guarantees the absence of conflict of interest. It merely publicizes it or the appearance of it.

That raises the question, Does full public disclosure encourage baseless charges of conflict of interest?

I think in certain cases it could.

For any person with substantial personal assets, the assets have to be, or should be, I guess one would say, invested somewhere.

I talked with one Senator who has a blind trust, who privately said that he thought probably if blind trusts are eliminated, the only avenue for him would be to invest in Government bonds, because investments on a broader base would give rise to either conflicts of interest or perhaps the appearance of such.

Given the broad range of decisions which a Senator must vote on, virtually any type of investment could potentially be affected.

Even though the direct or indirect effect of a Senator's vote could be, and probably would be, inconsequential regarding the economic health of a particular investment, the way would be opened for an unlimited number of baseless charges with which Senators would have to cope.

Forcing a Senator to stand aside on any vote that potentially affected his finances would, in many cases, effectively deprive many States of their representation in a significant number of cases.

Is there an alternative to full disclosure which can better eliminate conflicts of interest for some Senators and still enable each State to be fully represented on all issues?

I think properly drawn, a publicly disclosed, irrevocable blind trust should do it. The Senator would not know what his financial interests were, hence there could not be a conflict.

Can a trust be set up that is truly blind, which really eliminates conflicts of interest?

I think it could, if it did the following: If the trust terms were fully disclosed—and this is a requirement of my amendment—it includes a series of requirements, and I will mention them.

If the trust was irrevocable during the term of Government service.

If the original contents are fully disclosed.

If the original assets are diversified or in cash, to the satisfaction of the Ethics Committee.

If the trustee is truly independent.

If the trustee has complete investment discretion.

If the contents and sources of income are not disclosed to the Senator.

If sworn affidavits from the Senator and the trustee to the fact of the blindness of the trust are effected.

If the Ethics Committee has reviewed the sufficiency of the trust arrangement.

The trustee, of course, would make periodic reports of the cash value of the trust and the income that the trust furnishes.

A truly blind trust can be established which effectively eliminates conflict of interest and which prevents harassment form frivolous conflict-of-interest charges. Hence, the blind trust should at least be available to Senators who have substantial investments and hence a greater potential for conflict of interest.

Financial interests of Senators vary. Some have real or potential conflicts of interest—some do not. The "publicly disclosed blind trust" should at least be available to Senators who have substantial investments and hence a greater potential for conflict of interest. If it is not available, then I think Senators may be forced to make bad investments just to avoid the appearance of impropriety.

Allowing the use of publicly disclosed blind trusts in many cases affords a better means of eliminating conflicts of interest. As such, it is not just for the convenience of Senators, but is a better means of advancing the public interest in general.

Mr. President, I know that there are a number of Senators who have blind trusts who would like to speak on this issue, and I am happy to yield at this time.

Mr. DANFORTH. Mr. President, will the Senator yield?

Mr. BARTLETT. Mr. President, before yielding, I ask unanimous consent to have printed in the RECORD the form of the blind trust which I have used, and which I disclosed at the time I entered into the blind trust.

Mr. NELSON. Mr. President, I did not hear the request.

Mr. BARTLETT. It is a request for unanimous consent to have printed in the RECORD the form of the trust which I used in my blind trust.

Mr. NELSON. No objection.

There being no objection, the form was ordered to be printed in the RECORD, as follows:

THE DEWEY F. BARTLETT TRUST

Trust agreement, made this -- day of ----------, 1973, by and between DEWEY F. BARTLETT, a domiciliary resident of Tulsa, Oklahoma (hereinafter referred to as "Settlor"), and National Bank of Tulsa, a national banking association, in Tulsa, Oklahoma (hereinafter referred to as "Trustee").

Witnesseth:

Whereas, Settlor was recently elected as a United States Senator for the State of Oklahoma, and, in order to evidence and promote his desire of achieving actual, as well as apparent, impartiality on all issues and matters affecting his personal and political life, and to minimize or eliminate possible conflicts of interest in this regard, Settlor hereby establishes a trust to receive, hold, administer and distribute certain assets which he will transfer to the Trustee from time to time, and Settlor has herewith deposited the sum of Five Dollars ($5.00) to establish and fund said trust; and

Whereas, the Trustee acknowledges receipt of said deposit, and agrees to hold the same, together with all additions hereto, in trust, for the purposes and on the conditions hereinafter set forth.

Now, therefore, in consideration of the premises and the mutual covenants herein contained, the Settlor and Trustee agree as follows:

I.

This Trust shall remain in effect until Settlor ceases to be a United States Senator, whether by reason of his death or otherwise, and, during such term hereof, Settlor retains no right to alter, amend, revoke or terminate this Trust, which is and shall remain irrevocable.

If Settlor is living at the time of termination of this Trust, i.e., when he ceases to be a United States Senator, then the entire remaining trust estate shall be forthwith distributed and returned to him, free of trust.

If this Trust is terminated by reason of the death of Settlor while he is serving as a member of the United States Senate, then the entire remaining trust estate shall be forthwith distributed to such person[s] or other beneficiaries, including his estate, in such proportions, whether outright or in trust, as Settlor shall designate and appoint in his Last Will and Testament or any Codicil thereto; or if, and to the extent that, such general power of appointment by Will is not validly exercised by Settlor, then such remaining trust estate hereof shall be forthwith distributed to Settlor's estate.

II.

During the term of this Trust, all of the net income hereof shall be paid to Settlor or to such other person[s] or concern[s] as he may from time to time direct by instrument in writing delivered to the Trustee; such income shall be paid in quarterly or more frequent installments as Settlor directs. In addition, the Trustee shall pay to Settlor

so much of the principal of this Trust, up to the whole thereof, as he may from time to time direct by instrument in writing delivered to Trustee.

All payments of income as above required and of principal as above authorized shall be made in cash or by check without identifying the source thereof and, in no event, shall payments be made in kind of other property forming a part of the trust estate.

Provided, however, that if Settlor becomes incapacitated by illness, age or other cause, the Trustee may, in its uncontrolled discretion, from time to time, while it believes such incapacity continues, apply all or any part of the net income or principal of this Trust toward the support, care and maintenance or otherwise for the benefit of Settlor and/or his wife, ANN S. BARTLETT, in such amount or amounts and in such manner as the Trustee may determine, without regard to the other means of Settlor or his said wife. Any net income which is not disposed of as above provided shall be added to principal at the end of each year.

III.

With respect to the management of this Trust, the character and manner of making investments and reinvestments of trust funds, the sale, conveyance or transfer of trust property, and the powers and duties of the Trustee, the provisions of the statutes of the State of Oklahoma in force on the date hereof, including, but not limited to, 60 Okla. Stat., Sections 161, 162, 163 and 175.1 et seq., shall govern, except as they may be modified or limited by the provisions herein contained. No repeal or amendment of said statutes shall change the powers and duties of the Trustee hereunder, and the provisions of said statutes, existing on the date this Trust is executed, except as herein modified or limited, shall continue in effect with respect to all property which may come into the hands of the Trustee, whether such property has a situs within or without the State of Oklahoma.

In addition to such statutory powers, the Trustee is expressly authorized to:

A. Invest and reinvest all or any part of the truse estate, in such stocks, bonds, notes and other securities or other property, real or personal, including investment trusts and common trust funds, as it deems advisable and proper, without regard to any law or rule of court limiting the property which trustees may purchase; except, and provided, however, that the Trustee is and shall be prohibited from investing in securities of corporations or other entities which derive 10% or more of their gross income from the exploration, drilling production and/or marketing of oil and/or gas.

B. Retain and hold any assets or property acquired from the Settlor or pursuant to authority granted hereunder, including cash, without regard to diversification, limitation as to time, suitability of original purchase, and/or any other restriction or qualification.

C. Exercise any option or right with respect to any stocks, bonds or other securities of the trust estate, and take any action necessary or proper in connection with any plan of operation, sale, lease, mortgage, consolidation, merger, exchange, reorganization, foreclosure, (liquidation or dissolution as to any corporation in which the Trustee holds stocks, bonds or other securities, and as to any of the property of such corporation; and the Trustee, when it deems it advisable, may execute a proxy to such person or persons as the Trustee may select to act for it in the exercise of those powers.

D. Hold all or any portion of the trust estate in bearer form or in its own name or in the name of a nominee or nominees, with or without disclosing the fiduciary relationship; provided, however, that the Trustee shall be responsible for all acts and omissions of such nominee relating thereto.

E. The Trustee shall have the power to appoint an individual or corporation as trustee to act with respect to any portion of the trust estate which has a situs in a jurisdiction in which it is not qualified to act, and shall have the power to remove each such appointee at any time, with or without cause. Each such appointee shall have all of the powers herein granted to the Trustee with respect to the management of the trust estate, and shall transfer to the Trustee as soon as practicable all gross receipts derived from the portion of the trust estate under his or its control.

F. Sell or exchange (subject to the prohibition expressed in paragraph A above), all or any portion of the trust estate from time to time, upon such terms and conditions as the Trustee, in its sole discretion may determine, free from and discharged of the Trust, and may deliver good title thereto, and no purchaser at any such sale or exchange shall be obliged to see to the application of the money or other property received by the Trustee.

G. Borrow money to protect, preserve or improve the assets of this Trust, and/or in order to accomplish the purposes hereof, and pledge or mortgage trust assets as security for any loans thereby obtained.

H. Manage, operate, repair, improve and/or lease, for a period or periods within or beyond the term of this Trust, any real property forming a part of the trust estate.

I. Abandon any property which it deems to be burdensome or valueless.

J. Consult with legal counsel and be fully protected in any action or non-action taken, permitted or suffered in good faith, in accordance with the opinion of such counsel. The Trustee is further authorized to employ accountants, brokers, agents and others for assistance in performing its duties hereunder.

K. Compromise, contest, submit to arbitration or settle all claims by or against this Trust or the Trustee.

L. Accept additions to this Trust from Settlor, from time to time.

M. Make, execute, acknowledge and deliver any and all deeds, leases, assignments and instruments, and otherwise do and perform all acts which the Trustee deems necessary or proper to carry out the terms and provisions of this Trust.

Provided, that all powers of the Trustee shall be exercised only in a fiduciary capacity.

The compensation of the Trustee for services rendered hereunder shall be commensurate with the compensation for like services ordinarily and customarily paid in the community where such services are rendered. The Trustee shall serve without requirement of bond.

IV.

The Trustee shall maintain books and accounts showing all transactions relating to the trust estate, but shall make no reportings therefrom to Settlor at any time or in any manner which would disclose or otherwise identify the specific assets held by the Trust or any investments made during the term hereof, it being Settlor's desire and direction that he be absolutely relieved and foreclosed from all responsibility, knowledge and access to information concerning the administration of this Trust, the composition of its assets and all investment and other decisions concerning the trust estate throughout the term of this Trust, except as provided below:

A. The Trustee shall furnish Settlor, annually, a statement as to the aggregate beginning and year-end values of the trust estate and such minimal information as is necessary for Settlor to report the income received from this Trust on his personal income tax returns.

B. Settlor reserves the right to make periodic recommendations to the Trustee as to the overall investment program of the Trust, by classification of investment, i.e. income (tax exempt or non-exempt), balanced or growth, and the respective percentage of each.

C. Settlor reserved the right to remove National Bank of Tulsa (or any subsequent trustee) from the office of Trustee, at any time, with or without cause, and to appoint another national or state bank in Tulsa, Oklahoma, having trust powers and capable of performing the required services as successor Trustee by written notice to National Bank of Tulsa, or to any intermediate successor Trustee later appointed; provided that no change of Trustee shall affect or in any manner modify the terms and provisions hereof.

V.

Should any of the provisions of this Trust, for any reason whatsoever, fail or be declared invalid by final judgment or decree in any court of competent jurisdiction, such failure or invalidity shall not defeat or impair any of the remaining provisions herein contained, but this Trust Agreement shall be construed as if such provision or provisions so failing or declared invalid were not included herein.

VI.

The situs of this Trust shall be the State of Oklahoma, and this Trust shall be construed according to Oklahoma laws.

VII.

This Trust Agreement shall be binding upon the heirs, executors and administrators of the Settlor, and upon the successors and assigns of the Trustee.

In witness whereof, the Settlor and Trustee have executed this Trust Agreement on the date first above shown.

Mr. BARTLETT. I yield to the Senator from Missouri. How much time does the Senator want?

Mr. DANFORTH. Ten minutes. Or 5 minutes.

Mr. THURMOND. Mr. President, will the Senator yield?

Mr. BARTLETT. Does the Senator from South Carolina wish me to yield?

Mr. THURMOND. I have a few questions to propound. Let the Senator from Missouri go first.

Mr. BARTLETT. Mr. President, may I ask who is in charge of the time?

The PRESIDING OFFICER (Mr. PELL). The Senator from Oklahoma is in charge of the time in support of the amendment; the Senator from Wisconsin the time in opposition.

Mr. BARTLETT. I yield 5 minutes to the Senator from Missouri.

Mr. DANFORTH. Mr. President, the resolution as it is now before us states:

It is the sense of the Senate that trusts established for the purpose of being "blind trusts", whether revocable or irrevocable, shall be dissolved by the creating party to permit the disclosures required by this rule.

I think the issue that has been raised by the amendment offered by the Senator from Oklahoma is whether this provision in the bill has been carefully thought out, and whether it does not in fact do more harm than good in accomplishing the objective that I take the bill to have.

This morning I was present at a meeting of the Senate Finance Committee at which a number of nominees appeared in confirmation hearings. The chairman of the committee asked each one if they had looked into the possibility of conflict of

interest, and what they had done about it. A number of the nominees who appeared stated that they have looked into the possibility of conflicts of interest, and they have solved that problem, or attempted to resolve it, by transferring their assets into blind trusts.

It is my understanding that the position of the administration with respect to executive branch nominees is to encourage the creation of true blind trusts in order to make it possible for people who have some means to enter public service.

When a person takes on a responsibility such as a major post in the executive branch, or certainly membership in the U.S. Senate, oftentimes he would have a portfolio of investments which, insofar as they were concerned, would be quite disposable, interchangeable investments. The effect, it would seem to me, would be twofold: First, to provide that someone else would manage their investments for them, in that they simply would not have the time to do it themselves and to discharge their public responsibilities; and, second, to provide that they did not have the possibility of conflict of interest, because they did not know what they had and they had no way to determine or to influence what they had.

In order to achieve these two ends, the best available and I think the only available technique that is open is the creation of a blind trust.

Now, what is involved here, I would suggest, is not so much a true conflict of interest as the appearance of a conflict of interest, because I think there is a pretty tenuous relationship, oftentimes, between a vote in Congress and the specific interest of a particular corporation, the effect of the vote on that corporation, and in turn on the value of a few shares of stock or the dividends on those few shares of stock.

But in the area of conflict of interest, appearance is everything; and if we did not provide for a blind trust, and a person's holdings were known to him and also known to the public, it is difficult to imagine a single item before the U.S. Senate which would not at least create good newspaper copy and good political stump speeches, or 30-second commercials in the next campaign, making the charge of a conflict of interest.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. DANFORTH. May I have 3 more minutes? Two more minutes?

The PRESIDING OFFICER. The Senator is yielded 3 more minutes.

Mr. DANFORTH. For example, let us suppose a Member of the Senate held, say, 10 shares of stock in A.T. & T. or in IBM, or in RCA.

How would that Senator vote on the question of the Communications Reform Act, the so-called Ma Bell Act? Would he have to have the permission of the Senate to excuse himself, or would he have to vote "present" in order to avoid the alleged conflict of interest in that situation?

Suppose he owned a few shares of stock in a soft drink company? What is he supposed to do in regard to the saccharin controversy? Should he vote "present" instead of participating in the deliberations, even though his vote is not in fact influenced at all by this?

Suppose he owns a few shares of stock in an aluminum company and "ban the can" legislation is before the Senate? Or automobile emission standards are before us and he has securities in Ford, GM, or Chrysler? Or any energy bill is before the Senate and he happens to own securities in an oil company? I think it would be a very tenuous argument to say there is a substantial conflict of interest or a real conflict of interest, to equate that vote with a specific dollar amount of profit that would be realized by the Senator involved.

I do beileve, insofar as the public's perception of what we are about, it would be something of a disaster.

I would like to express my appreciation for the concept presented by the Senator from Oklahoma and state that I believe this is a matter which deserves very careful consideration by the Senate. I would tend to view blind trusts as a useful means of avoiding conflicts of interest rather than the cause of any problem with which we are now dealing.

The PRESIDING OFFICER. Who yields time?

Mr. THURMOND. Mr. President, would the Senator from Oklahoma care to answer a few questions?

Mr. BARTLETT. I will be happy to answer questions.

Mr. THURMOND. The first question is, should the mechanism of a blind trust be available to Senators if the appropriate safeguards are provided?

Mr. BARTLETT. Yes, I think they should be, because I think the Senator who has investments in one or more companies is very apt to be faced with a vote where that vote could be interpreted as voting for his own interests, because of his investments. There will be many questions upon which there will be votes as far as energy is concerned, or oil stocks, with the tight competition between General Motors and Chrysler in the acquisition of additional new XM-1 tanks. The votes could be greatly misinterpreted and could appear to be conflicts of interest, which I think important for a Senator to avoid.

Mr. THURMOND. I have another question: How does the language in the Senator's amendment differ from the language in the resolution on a blind trust?

Mr. BARTLETT. The language in the resolution on blind trusts really creates a very painful hiatus for the person who has a blind trust. The resolution really says it condemns blind trusts and advises those who have them to prepare to take legal action to have them voided so that the stocks of that trust or the assets of that trust may be publicly disclosed.

At the same time, privately, the Senators are also hearing that the Senate must face up to the question of blind trusts on a broad basis and establish rules for all three branches. They are advised, "Do not worry. The Senate is bound to do something." They are told that the Senate will establish a similar blind trust bill for all three branches of Government.

What this amendment does is to set in parameters 80 to 90 percent of what would be required of blind trusts. It calls for a study. During the intervening period the current blind trust would remain valid. If the Senate decided later to do away with blind trusts, it could. If it wanted to alter the requirements still further, it could. But the Senate would have some parameters which are restricting blind trusts which would become effective in May 1978.

Mr. THURMOND. I have one more question: What safeguards can be provided to prevent a conflict of interest or the appearance of a conflict?

Mr. BARTLETT. There are a number of safeguards which I believe are important: That the trust terms be fully disclosed; that the trust instrument be irrevocable; that the original contents are fully disclosed; that the original assets are diversified or in cash to the satisfaction of the Ethics Committee; that the trustee is truly independent; that the trustee has complete investment discretion; that the contents and sources of income are not disclosed to the Senator and affidavits to that effect are obtained, and that the Ethics Committee has reviewed the sufficiently of the trust arrangement.

Income derived from the trust should be periodically reported and the cash value of the trust should be periodically reported.

Mr. NUNN. Will the Senator yield?

Mr. BARTLETT. I yield.

Mr. NUNN. If the Senator from South Carolina has completed his questioning, I do have a statement to present.

Mr. THURMOND. I am almost finished.

I just wondered if the distinguished Senator from Oklahoma had the opportunity to see the amendment of the Senator from Missouri, and whether the Senator feels this would accomplish what he had in mind.

Mr. BARTLETT. It is an improvement over the language in the present resolution, but there is no assurance that there will be any action taken. I believe it makes much more sense for the Senate, as far as blind trusts are concerned, to continue the present blind trusts which people have, to study and review the matter, and then make a decision. I believe that is far superior, having the parameters, restrictions, and requirements which are provided in this amendment.

Mr. THURMOND. Under the terms of the amendment of the distinguished Senator from Missouri, the Committee on Governmental Affairs would review the desirability of establishing rules and regulations for the establishment and maintenance of blind trusts and make a report back to the Senate.

Mr. BARTLETT. I believe it makes sense, with regard to the existing trusts, to apply restrictions to them which would go at least 70 to 90 percent of the way the committee would go later on in restricting them and providing proper

reporting procedures, and so on, than it would be to proceed in the way the Senator is suggesting.

Mr. THURMOND. I thank the distinguished Senator.

Mr. BARTLETT. I will yield to the Senator from Georgia.

Mr. DOLE. Will the Senator yield first for a question?

Mr. BARTLETT. I yield.

Mr. DOLE. I have read the amendment of the Senator. I just wonder whether this would cover this personal case. My wife is a member of the Federal Trade Commission. It is a wise practice for members of the FTC to establish a blind trust. However, if they have a blind trust, and if we pass this bill as it is, she would be in conflict. She would have to reveal the assets of that trust under this rule. That does not seem to be in harmony with the intent of this proposal. There is the need, dictated by wise practice and concern for conflicts of interest, that there be a blind trust and then we pass a law saying there should not be a blind trust. Will the Senator address that question?

Mr. BARTLETT. This mechanism will make available the blind trust to the person who wanted to have a blind trust.

Mr. DOLE. The resolution we have before us creates no exception for spouses who are judges or prosecutors or whose office requires them to act in an adjudicative capacity, which includes a Federal trade commissioner.

Mr. BARTLETT. This resolution, as I understand it, requires spouses to disclose; that is one of the requirements.

Mr. DOLE. I hope the distinguished Senator from Oklahoma or someone can shed some light on what happens where we have a situation that calls for a blind trust and we pass a law that says one cannot have a blind trust. I do not want to involve the Senate in a personal matter, but I think when the ethics bill before us raises a problem, we ought to try to resolve it. I do not assume that was the intent of anyone on the Ethics Committee, but it does present a problem that I think the Bartlett amendment would address.

Mr. BARTLETT. That is correct. I think the Senator should, when the floor manager, the Senator from Wisconsin, returns to the floor, ask him this question. I think the Senator has the problem of the immovable object and the irresistible force.

Mr. NUNN. The Senator from Georgia will answer the Senator's question. I think it is still with the Senator and his wife to decide whether the Senator is going to be unethical or the wife is going to be illegal.

Mr. DOLE. I would not want to try to resolve that one. But it does present a real problem that I hope someone on the other side in this fulltime body could address this before we finish the ethics bill.

Mr. BARTLETT. Mr. President, how much time does the Senator wish?

Mr. NUNN. Will the Senator yield to me about 5 minutes?

Mr. BARTLETT. I yield 5 minutes to the Senator from Georgia.

Mr. NUNN. Mr. President, the treatment of blind trusts has concerned me since the initial debate on the subject during the deliberations of the special committee which was assigned the task of drafting this proposed code of conduct. At that time, the majority of the committee decided to mandate a dissolution of any blind trusts which a Senator may have established in an effort to avoid the appearance or the fact of a conflict of interest. This decision was based partially on a commitment to public disclosure and partially on the fact that the committee could not locate any generally accepted guidelines for the establishment of a trust that is truly blind.

I completely endorse the amendment of the Senator from Oklahoma. As I said, I have been concerned about this treatment of blind trusts since the committee proposed this provision. I think the committee is wrong in this case. I was on the committee and brought it up and did not prevail. I feel that the committee provision is a step backward, not a step forward. I think the committee bill makes it impossible for a Senator with liquid assets to be able to blind those assets so he can walk on the floor of the Senate and not face an inevitable conflict of interest if he owns a good many stocks that are listed on the stock exchange.

I do not know a week that goes by that the U.S. Senate does not cast a vote, one way or the other, that affects some of the major stocks in this country. So I support fully the Bartlett amendment. I think it curbs any potential abuse in the blind trust mechanism and, at the same time, preserves this option for Senators who may feel keenly that they do not want to know what their assets are so that they will not have to be facing inevitably, frequently, the conflict of interest potential.

The treatment of blind trusts, I think, has not been studied by the Ethics Committee, and I think that the blind trust entity, if properly utilized, can play a constructive role in our effort to eliminate the potential for conflict of interest. I know that several of my colleagues, in a good faith effort to shield themselves from knowledge of their holdings, established trusts of this kind. I myself created one following my election to the Senate and, to be completely candid, I have no idea what the corpus of that trust is today. Furthermore, it is my understanding that President Carter, who, I am sure everyone will agree, has gone the extra mile to insure that his administration is conflict-of-interest-free, has placed the majority of his holdings in a blind trust for the duration of his service as President. It seems to me that precipitate action on the part of the Senate, on a subject which has received so much attention in the executive branch, could result in a completely confused public regarding the standards of their Government. How can the same mechanism discourage conflict of interest for one public servant and not for another?

How can we on Committee on Armed Services require blind trusts of officials that are going over to the Pentagon and handling very sensitive contracts every day that could create a conflict of interest and, on the other hand, say to ourselves that this is not the way we should do business, that it is completely the opposite of the way we should do business?

I think the committee provision creates that problem. It creates many more problems than it solves. I believe that the amendment which is being offered by Senator BARTLETT and myself and others addresses and satisfies the concerns which were expressed by the special committee on ethics on this matter but it does so in a sensible way. Moreover, it would permit the Senate to act in a fashion which will provide some consistency to the treatment of investment holdings by Federal officials in both branches of the Government.

This amendment provides specific and stringent guidelines for the establishment of a blind trust. The steps required to be complied with in order to create a blind trust which qualifies for exclusion from the wholesale dissolution and disclosure requirements already provided by the code insure that the trust is, in fact, blind and that the Senator cannot learn the identity of the corpus after its creation. The trust must be irrevocable for the term of the Senator's service, the trustee must be truly outside the direct or indirect control of the Senator, and the term of the trust must insure its blind character.

The amendment further requires that the existence of this blind trust be publicly disclosed and from this requirement it gains the name, "publicly disclosed blind trust." A copy of the trust agreement must be filed with the Secretary of the Senate; the original contents or the trust must be disclosed by source and amount, and affidavits must be submitted to the Secretary of the Senate by the Senator and the trustee certifying that the Senator will not have knowledge of the contents of the trust in the future.

Mr. President, this amendment satisfies the concerns expressed by the special Committee on ethics regarding the use of blind trusts. Specific guidelines are provided for and disclosure of the trust and its terms are mandated. These problems being alleviated, I encourage my colleagues to support the amendment to facilitate our efforts to prevent conflicts of interest.

Mr. NELSON. Will the Senator yield for a question?

Mr. NUNN. I am glad to yield for a question.

Mr. NELSON. I do not have the proposal of the Senator from Oklahoma in my hand at the moment. Does it require a mandatory turnover of some of the assets in the trust?

Mr. NUNN. As I understand it, and the Senator from Oklahoma could better address this question than I can, as I understand his amendment, it would require a disclosure of what is going into the trust before a blind trust is created. As for the asset turnover, I believe it does provide for a diversity of assets.

I defer to the Senator from Oklahoma for the answer to that specific question.

Mr. BARTLETT. It requires that what goes in be diversified. It would be re-

viewed by the Committee on Ethics. It requires a study which would include, in addition to a broad general study, a study of the turnover itself, whether or not there should be a certain turnover of the assets of the trust, and what the tax implications of that action would be. It does not require that turnover, but it does require a satisfaction of the Ethics Committee concerning the makeup of the diversity of the investment.

Mr. NELSON. Does the Senator then put upon the Ethics Committee the burden of deciding whether the holdings of a Member who has placed his assets into a blind trust are sufficiently diversified? And if they decide they are not sufficiently diversified, does the Ethics Committee then direct the trustee of the blind trust to sell?

Mr. BARTLETT. Let me point out, for example, that a person might have 90 percent of the investments, perhaps, in one company, one in which he or his family had considerable influence, and 10 percent scattered among several companies. This could be an existing situation.

Mr. RIBICOFF. I wonder if the Senator would yield?

Mr. BARTLETT. In that case, I think the Ethics Committee might decide that it was really not a blind trust, that the trustee would not, in a sensible approach to that investment, sell it.

Mr. NELSON. What is, then, the consequence?

Mr. BARTLETT. The consequence would be that the Senator would have to have that taken out of the blind trust.

Mr. NELSON. And just have a public disclosure?

Mr. BARTLETT. A public disclosure of that.

What that would do for some people is they would have only one investment there to worry about as to whether they might or might not have a conflict of interest. As far as the balance of that trust would be concerned, it would be diversified.

The PRESIDING OFFICER. The Senator's 5 minutes have expired.

Mr. BARTLETT. I yield to the Senator from Georgia additional time.

Mr. NUNN. Since we have a discussion going on this which would be more meaningful than for me to make a statement, I suggest that we can better consume the time in a dialog.

Mr. RIBICOFF. Will the Senator from Wisconsin yield me 5 minutes or so?

Mr. NELSON. Will the Chair advise the Senator from Wisconsin what time allocations are left?

The PRESIDING OFFICER. The Senator from Wisconsin has 40 minutes; the Senator from Oklahoma has 2.

Mr. NELSON. I yield 5 minutes to the senior Senator from Connecticut.

Mr. RIBICOFF. Mr. President, the Senator from Oklahoma and those who have spoken for his amendment do make a lot of sense. They have done an excellent job trying to draft an amendment to solve the problems of a blind trust. Unfortunately, there is no such thing as an accepted legal requirement for a blind trust or what is truly a blind trust. My feeling is that each of those who have spoken has a different blind trust from the other. I, too, have all my assets—practically all my assets, all personal ones—in what I consider a true blind trust. But when the committee discussed this—we did not have any hearings—we realized the gaps that existed.

Personally, I feel that there is a vehicle such as a blind trust that could be used properly in the whole question of disclosure and the whole question of conflict of interest. I would like to see a common statute or a rule that would apply the same standards to the executive branch, the judicial branch, and the legislative branch.

As the Senator from Missouri pointed out this morning, we had hearings in the Finance Committee concerning major appointees to the executive branch, and when the chairman of the Finance Committee asked about conflicts of interest, the nominees said they had satisfied the requirement by forming a blind trust after discussion with the staff of the Finance Committee and the counsel to the White House.

What worries me is that if at this stage we adopt the amendment of the Senator from Oklahoma, we place ourselves in the position that we are trying to have a loophole for a small group of Senators who have blind trusts, and this would be perceived, and I think properly so, as some Senators trying to get an edge or advantage over other Senators.

Since we are trying to treat all the problems here with some sense of evenhandedness or equity, I think it would be wrong to use the Senator's amendment at this stage.

I do feel that there should be hearings. I do feel that we should address ourselves to all three branches of Government. After hearings concerning all three branches of Government, if we feel that the device of a blind trust is proper and does the job we seek to achieve, then we should come out with a statutory regulation equally applicable to the Senate, the House, the judicial branch, and the executive branch of our Government.

Mr. DOMENICI. Will the Senator yield for a question?

Mr. RIBICOFF. I am pleased to.

Mr. DOMENICI. How long does the Senator think it will be before we have this law he referred to that would treat them all the same way by law?

The PRESIDING OFFICER. It is the time of the Senator from Wisconsin.

Mr. NELSON. I yield 5 minutes.

Mr. RIBICOFF. My feeling is that this could be done under instruction from this body in ample time before the May 15, 1978, deadline arrives.

I would say that without question it should be done before we adjourn this year.

Mr. DOMENICI. Then the Senator is saying that those who have a blind trust problem—if what he is saying occurs—would have a statute adopted which would then mean they could look at their blind trust versus that statute before the effective date in this bill?

Mr. RIBICOFF. That is right.

I think we could draw an amendment that would not require dissolution of the blind trust, but keep it in existence until the May 15, 1978, date.

My feeling is that we could act long before that date definitively, one way or another.

The decision may be to reject the use of blind trusts completely. On the other hand, it is possible to come up with a proposal to allow blind trusts to be acceptable under rules and regulations after hearings, that there would be a sense of uniformity, that we could measure the blind trust against the standards adopted and that the standards would apply equally through all branches of Government.

My feeling is that the executive branch would welcome this type of action by the Congress because there is concern in the executive branch as to what is or is not a blind trust.

Mr. NUNN. If the Senator will yield for a brief observation to follow that question, the Senator makes a good point, I think, on a matter that needs an awful lot of study.

I think the Senator from Oklahoma has done a remarkable job of drafting a statute which, on first appearance, as far as this Senator is concerned, addresses the problem very comprehensively and completely.

The difficulty I have with the Senator's proposal, it may be we could draw something out here, is that what we have is a Senate rule that will be on the books when we pass it saying the blind trusts have to be terminated.

Several people in the Senate have what we call irrevocable trusts that can only be broken by going to court.

Anybody that has been to court knows if we are going to have something done by May 15, 1978, we have to start court suits almost immediately, because of the dockets, because of the delays, and so forth.

Then what we would be doing is requiring Senators to proceed in the near future to go to court to break irrevocable trusts, and then we would be depending on a law passing.

We know the Government Affairs Committee, based on the Senator from Connecticut's assurances, would act with dispatch in this regard. But assume the Government Affairs Committee passes the comprehensive law, and assume the Senate even passes it on this subject, then it would have to go to the House of Representatives. The House of Representatives would have to agree to it, and I would say there is a strong likelihood we would never get it done this year, even though the intent would be good.

So I offer this suggestion. Why could we not strike the present provision in the rule being proposed so we would not have a presumption that a blind trust is going to be basically unethical by May of 1978, unless we pass a law saying otherwise, and let blind trust remain in effect, not subject to the disclosure law until such time as the Congress acts definitely on this subject?

This would put the burden where it needs to be and that is on the Congress to address this issue.

If we go as the Senator has outlined,

it will put the burden on strictly a few people who have blind trusts to get the entire U.S. Congress to act in accordance with its expressed intention, at least here on the floor.

So I think it ought to be up to Congress to pass a definitive law, addressing this subject for both the executive and legislative branches.

Mr. RIBICOFF. My response is a very pragmatic one. I have not the least idea how many in this body have blind trusts. But my guess is that it represents a small minority generally, and I think I would not want to personally be in the position of the Senate making an exception for me.

I think those of us who have blind trusts could be legitimately criticized that we are not disclosing what we have and expecting full disclosure from our colleagues.

The PRESIDING OFFICER. The additional time has expired.

Mr. NELSON. Five more minutes.

Mr. RIBICOFF. I think that it would place us all in a very untenable position, practically speaking and frankly speaking.

My feeling is that the Senator from Oklahoma, with the small time allowed to him when we consider that this was done overnight, has really drafted a pretty good—and I say a very good—proposal.

But there should be, I think, an input from the executive branch.

I do know that the House intends to act by September first on statutory proposals on the whole problem of conflict of interest. That means whatever they do would be statutory and it would not take effect until the Senate acted as well. If they do not act on the blind trust, it would have to go to conference and, of course, the Senate input would have great meaning. In addition, I know that the executive branch is interested in the problem of blind trusts. There is no question they would testify and they would have an input on the problem of blind trusts.

My trust is irrevocable as long as I am a Member of the U.S. Senate. I do feel that public policy would allow the taking away of the provisions making a trust blind once a body such as the Senate declares that that is required.

Mr. NUNN. But you have to go to a court of equity.

Mr. RIBICOFF. The Ethics Committee has an additional 90-day extension if, for some reason of hardship, one cannot comply by the May 15 deadline. So that would provide almost a year and a half to go through legal proceedings to break the blind trust if the trustee felt that he needed a court action. I imagine that a court of equity, under the circumstances, could move rather rapidly to declare it revocable if we could not come to a definitive action by May 15.

I would have to oppose the Bartlett proposal, even though I understand what he is trying to achieve and I understand the good faith with which he proposes it. In my opinion, every Senator who has a blind trust has acted in good faith in creating the blind trust.

Mr. BARTLETT. Mr. President, will the Senator yield?

Mr. RIBICOFF. I yield.

Mr. BARTLETT. The Senator said that the effect of the Bartlett amendment would be to make an exception for certain individuals. I do not believe that is what it really does. I think that the Bartlett amendment faces up to what really was the main thrust of the whole disclosure section, and that is to eliminate conflicts of interest. It provides a mechanism for doing that. I think it is available to anyone who feels that he has such a conflict of interest.

Some people would come to the conclusion that they do not have a conflict of interest; but I think that one of the proper goals and the highest goal of this ethics measure is to provide a mechanism for any Senator—for all Senators, if they wish—to eliminate a conflict of interest.

So this amendment puts additional constraints and parameters on what is just an irrevocable blind trust, publicly disclosed. It makes certain requirements which might go 70 percent or 90 percent of the way.

Mr. NUNN. Would every Senator, under the provisions of the Bartlett amendment, be entitled to the same treatment?

Mr. BARTLETT. Yes.

Mr. RIBICOFF. I do not think it would work out that way. Those Senators with substantive interests would have a blind trust. The others would not, and they would feel that they were being discriminated against because they were actually disclosing all they had.

There is deep feeling in this body on this entire issue, as indicated by the proposals of my colleague from Connecticut, Mr. WEICKER, Senator MUSKIE, and others who have felt that what we have done is that we have taken the wrong road, and they are unhappy with the entire rule.

The Nelson committee has worked hard and long in trying to get a fair proposal. My feeling is that the majority in this body would feel that advantage was being taken of them in behalf of those Senators presently with a blind trust, even though their intentions were legitimate. Those blind trusts were created long before this issue was raised.

The PRESIDING OFFICER. The Senator's 5 minutes have expired.

Mr. NELSON. Mr. President, how much time does the Senator from Wisconsin have?

The PRESIDING OFFICER. The Senator from Wisconsin has 25 minutes.

Mr. NELSON. Mr. President, I have not had a chance to study the proposal by the Senator from Oklahoma, and I am not a trust lawyer, anyway. However, in a casual glance at it, I endorse what the Senator from Georgia and the Senator from Connecticut said—that it is quite a job to have been put together in a very brief period of time. Nevertheless, as an amendment, it simply wipes out the proposal of the committee that blind trusts be dissolved; and it may very well be that, on the merits of the proposal, it should be removed. As of this time and with this opportunity to look at it, I would have to say that I would vote against the proposal.

However, I am mindful of the problem it creates: What happens if we agree to the resolution as is and then Members who have blind trusts were required to dissolve them, and if subsequently it was decided that the device of a blind trust was a perfectly valid alternative for a Member—as apparently the executive branch is now doing. What happens if we then followed with a statute saying that we hereby authorize blind trusts that meet certain standards, such as disclosure of what went into the blind trust and disclosure of the trust instrument and all such matters, then we put the Members who have dissolved their blind trusts to the expense and problem of going back and creating a new blind trust. I am aware of that, and I do not think we should do that.

I believe that the Senator from Missouri may be prepared to offer an amendment, which I have looked at and which I support. I think it deals with the matter quite fairly. That proposal, if offered by the Senator from Missouri, I would support. If not offered by the distinguished Senator from Missouri, I would offer it myself.

It would provide that the Government Affairs Committee—and the chairman is here—would study the problem for 180 days. If they conclude from their hearings that a blind trust is an alternative that is desirable, they would report within 6 months, setting all the standards for a proposed rule, which the Senate would then work its will upon. If, in fact, they reached a different conclusion, then the section which dissolves the blind trusts would remain in effect.

I have come to the conclusion, after looking at it, that it is pretty likely—and I am not on the committee—that they can establish standards which disclose everything going into a trust and which create standards for a blind trust. That would be just 6 months from today.

I would be prepared to support that. But I must say that, without the opportunity to study it in some depth and to talk with committee members, I am not prepared to amend the resolution to eliminate the provision which requires their dissolution.

Mr. CRANSTON. Mr. President, will the Senator yield?

Mr. NELSON. I yield.

Mr. CRANSTON. Mr. President, I think that all the Senators speaking on this matter have made quite valid points in regard to the problems created by the blind trust provisions of this bill and to the difficulty in making changes that are greatly detailed and which respond to the problem of blind trusts set up presently by certain Members.

Senator NUNN makes a most valid point. He is saying that, on the one hand, we have been requiring people in the executive branch and elsewhere to set up blind trusts. On the other hand, for Members of this body, we are requiring disclosure to avoid conflict of interest.

He and others have set up blind trusts so that they will not have any conflict of interest. Now we are requiring that the blind trusts be dissolved and that whatever is in there be revealed.

Senator NUNN does not know what is

in his trust. If the assets in the trust are revealed at some point, it could be embarrassing to him, because something could be held by his trustees that could create an apparent conflict of interest. Obviously there is no conflict of interest now, because he does not know what is there. However, when it is revealed, then he could find himself in a conflict of interest situation.

That is an absurd situation to impose upon Senator NUNN or any other Member of this body. Most of all, it is absurd to impose it upon people who deliberately took steps to protect themselves and to live up to the highest concepts of the public trust that someone assumes when one enters this body.

It is important to resolve this matter in ways that do not needlessly embarrass Members of this body, that do not require disclosure of facts that should not be disclosed and are not required to be disclosed, and that are consistent with applicable practice.

For all these reasons, I think that the best approach before us is the one offered by the distinguished Senator from Missouri (Mr. DANFORTH). He at least seeks to shift some of the burden to come up with an answer in time to resolve the practice in a decent way from those who have blind trusts and who face possible difficulties and embarrassment by needless disclosures onto this body and its committee structure.

I do wish to thank the Senator from Oklahoma, who made a very fine effort in a short time—one that I would have been glad to support but one which obviously will not be accepted by this body at this time.

Given that fact, I urge that the amendment by the Senator from Missouri be made available as one that we may vote on. I believe it will resolve the matter in the best way, taking into account all the views expressed by Senator NELSON, Senator RIBICOFF, Senator THURMOND, and those who hold other views of this matter.

Mr. DANFORTH. Mr. President, I have sent to the desk a substitute for the amendment offered by the Senator from Oklahoma and I ask for its immediate consideration.

Mr. BARTLETT. Mr. President, will the Senator withhold that request?

Mr. DANFORTH. Yes.

Mr. BARTLETT. Mr. President, will the Senator yield?

Mr. NELSON. Yes, I will yield whatever time the Senator from Oklahoma desires.

The PRESIDING OFFICER. Until the time has expired on the amendment of the Senator from Oklahoma it will not be in order to report the other amendment.

Mr. CRANSTON. The Senator can yield back his time, however, when he chooses.

The PRESIDING OFFICER. Correct.

Mr. BARTLETT. Mr. President, will the Senator yield for a question? The Senator has proposed an alternative which is far superior to the provisions of the resolution.

The Senator advised me privately that the committee suffered from constraints of time and, hence, did not have the opportunity to have full hearings on blind trusts, so I recognize that problem.

But what was hard for me to recognize, and why I feel this amendment is superior to the alternative that has been suggested by the Senator from Wisconsin, is that the conclusion was reached without hearings that blind trusts were bad, that they should be condemned and just outlawed, and a member who had one forced into a hiatus where he would at some point have to appear before the courts to have set aside an irrevocable trust, which would mean he was then asking the court to permit him to break his word.

So it seems to me since these were entered into in good faith, and because we have had a chance to discuss the requirements that should be in a blind trust at some length over several days, and because this amendment I introduced does provide these restrictions—certainly not all probably that should be provided, but certainly every one I think there was any agreement on—we then have that be the law or be the effect of it, be the will of the Senate come May of 1978, because I have true concerns that were very ably expressed by the Senator from Georgia that it was going to be very difficult for both Houses of Congress to not only discuss the problem of conflicts of interest and blind trusts as far as the Senate is concerned, but to do so also with the House, to reach a consensus and then to consider the blind trust aspects of the executive branch and judicial branch, because those may be quite a bit different, and it is going to be a much bigger job.

However, with this resolution in the interim we continue the blind trust as a proper means of avoiding conflicts of interest, yet we reserve the right to make any change that needs to be made. But it does not put a Senator in the embarrassing situation that the Senator from California just talked about, and which I think everyone who has a blind trust has thought about, the embarrassment that will take place when his irrevocable trust which he signed and said, "I am not going to change it until I leave the Senate," and then he appears before a court and asks to have it broken, and then also discloses the contents and have the embarrassment that may come from that.

Then, maybe at a much later date we can have a vehicle for an improved blind trust. I think by that time the Senator would be very discouraged and distraught and probably not the least bit interested in a blind trust and in really trying to avoid a conflict of interest.

I would like to point out this resolution does not terminate conflicts of interest. It just focuses attention on them, so there will be pressures in that direction. But there still must be a way, I think, for a person who has investments to make to make sound investments, and to avoid a conflict of interest. If it is the consensus of the Senate that we do not want Members of the Senate to make those kinds of investments, then I think it should express itself very loudly and very clearly on that so that Members of the Senate will really know the parameters of conflict of interest as seen by the Senate.

So I feel the compromise is superior to the resolution. But I think it does not handle the problem of dealing with the conflict of interest in the interim in a proper way, and in providing some assurance until there is a decision reached that a blind trust is an appropriate and proper means of avoiding a conflict of interest.

Mr. NELSON. Let me say, if I may, neither this Senator nor anyone else I know of have said that blind trusts are bad. I have never reached such a conclusion.

I do not have my opening statement here, but in the introduction of the resolution I very specifically said there are Members who have blind trusts; and that it has been a traditional practice to use the blind trust.

What we did say in the report was that there are no established standards for what is a blind trust.

Mr. RIBICOFF. Mr. President, will the Senator yield at that point?

The distinguished chairman invited anyone who wanted to testify to testify, including Members of the Senate.

To my knowledge, there was no testimony whatsoever on blind trusts except one question I asked the representative of Common Cause:

One other comment: You would then advocate the elimination of all blind trusts?

They went on and said unless it was a true blind trust, unless there were some rules and regulations, they would be against it, and that was the sum of all the testimony on blind trusts.

It is unfortunate that those with blind trusts, that those with that point of view, did not avail themselves of the chairman's invitation.

It could very well have been that if a case had been made before the committee by the Members on the floor today, we would have gone deeper into the problem of blind trusts, but that did not happen.

Mr. BARTLETT. Mr. President, will the Senator yield?

Mr. NELSON. For a question?

Mr. BARTLETT. Yes.

I would point out that at the top of page 12, line 3, it says:

it is the sense of the Senate that trusts established for the purpose of being 'blind trusts', whether revocable or irrevocable, shall be dissolved by the creating party to permit the disclosures required by this rule.

So I think we are expressing here a condemnation of a blind trust, and I think this is certainly uncalled for, particularly because there were no hearings to establish a position of reason that would condemn blind trusts.

Mr. RIBICOFF. Mr. President, if the Senator will yield further, the fact that the chairman has indicated a willingness to take the so-called Danforth substitute indicates the committee feels, after this debate, that there is some basis for full and complete consideration of this issue, with full hearings.

So if the Senator feels bad about what

was an implied condemnation, that is not really accurate, as far as the committee and the Senate as a whole are concerned, because the chairman is indicating he is willing to have this problem gone into in depth.

(Mr. MORGAN assumed the Chair at this point.)

Mr. NELSON. May I say that the provision in the resolution for dissolution of blind trusts does not by my interpretation mean a condemnation of that practice, any more than the fact that some Senators have disclosed their tax returns represents any condemnation of those who have not. Nor is the fact that we are including in here toward a category-by-category proposal for disclosure suggest a condemnation of anybody who in the past has not done that.

The issue was raised. We held hearings and we sent a letter to all Senators, inviting testimony from everybody, and disclosure was one of the items mentioned in the letter. The issue was raised and, two members of the committee, in fact, do have blind trusts, so they were aware.

It was discussed—a little bit more than that, I might say—since we were on the issue of disclosure. The House did spend time on the issue, and the House concluded that full disclosure of everything rather than blind trusts was the route they wanted to go. Given the fact that they had studied it, I must say that I personally leaned toward going that way also.

After looking at the problem more in detail, I now conclude that possibly we were not correct. So we have a situation in which the House of Representatives has a rule to dissolve blind trusts. We also have a situation in which the Preyer commission is going to translate into a proposed statute those items of the Obey commission code as well as other items that will be considered by the Preyer committee. We may very well be in a situation in which a statute comes over which uses the Obey commission approach on blind trusts. So we may be presented with a statute on dissolving blind trusts, and if we adopt the proposal of the Senator from Oklahoma we will have passed another resolution here saying that blind trusts are OK, if they meet this standard. I think we will be in a better posture, from all standpoints, to have the Governmental Affairs Committee, of which Senator RIBICOFF is chairman, go into this matter, for 6 months provided in the proposed amendment of the junior Senator from Missouri. That committee will report 6 months from now and if they propose a standard and the Senate accepts the standard, then that is our rule.

And I would suspect that if the House of Representatives then sent over a statute that might very well be an issue on which we would not come to agreement.

Mr. WALLOP. Mr. President, will the Senator yield for a question?

Mr. NELSON. I yield.

Mr. WALLOP. It seems to me, and I agree with the Senator from Wisconsin, that something has to be done to resolve this. But if he will refer to Resolution 110 on the bottom of page 10 and top of page 11 there is an unresolvable internal conflict with this language as it exists now. And if I could read it for the Senator, it says:

"(d)(1) The holdings of and income from a trust or other financial arrangement, whether 'blind' or not, whether or not created by or under the control of the reporting Senator, * * *

And I will skip the language intervening.

* * * must be publicly reported according to the provisions of paragraph 2, except that the identity of the holdings and the sources of a trust's income need not be disclosed if—

"(A) the trust was not created directly or indirectly by the reporting individual, his spouse, or dependents, * * *

It is impossible to comply with both those situations.

Mr. NELSON. I guess I do not quite follow that. Which two provisions are in conflict?

Mr. WALLOP.—

"The holdings of * * * a trust * * * whether 'blind' or not, whether or not created by or under the control of the reporting Senator * * * must be publicly reported * * * except that the identity of the holdings and the sources of a trust's income need not be disclosed if—

"(A) the trust was not created directly or indirectly by the reporting individual, his spouse, or dependents, * * *

It is impossible for those two things to exist.

Mr. NELSON. I can see the point of the Senator from Wyoming. I understand the Senator has proposed a sentence to clarify it semantically.

Mr. WALLOP. I am prepared to so do if something does not pass in here. But I simply direct an inquiry to the Senator from Wisconsin as to whether or not he felt this was a conflict.

Mr. NELSON. On second reading I can see that the interpretation can be made that there is a conflict.

Mr. DANFORTH. Mr. President, will the Senator yield?

Mr. WALLOP. I yield.

Mr. DANFORTH. Will this be corrected, assuming we can work out the rest of the problem, by striking on line 1 of page 11 the words "whether 'blind' or not"?

Mr. WALLOP. No, I do not think it will. If it is all the same, I prepared that amendment and will submit it later.

Mr. NELSON. May I suggest to the Senator from Wyoming, if the Senator from Missouri is going to call up his substitute, let us act on the amendment and then deal with this material, either now or after staff can look at it and review it.

Mr. WALLOP. I am prepared to do that. I simply wished to get the feelings of the Senator from Wisconsin as to whether or not this did create a problem.

Mr. NELSON. I can see the point the Senator is making. I think the Senator is correct.

Mr. WALLOP. I thank the Senator.

Mr. BARTLETT. Mr. President, I wish to have the attention of the Senator from Wisconsin and the Senator from Connecticut. I do thank them very much for their consideration of the amendment that I introduced and for their understanding of the problem that does exist for those who in good faith entered into blind publicly disclosed irrevocable trusts. I certainly see the greater value achieved by the proposed amendment that will be offered in just a minute by the Senator from Missouri. So, before asking unanimous consent to withdraw my amendment, I do wish to thank very much the two floor leaders and all those who contributed to this dialog, because I think it will be very helpful when hearings are heard and when the appropriate committees are dealing with this problem.

So, Mr. President, I ask unanimous consent to withdraw my amendment, and I yield back the remainder of my time.

The PRESIDING OFFICER. Without objection, the amendment is withdrawn.

Mr. NELSON. Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. All time has been yielded back.

Under the previous order, the Senator from Missouri (Mr. DANFORTH) is recognized to call up an amendment on which there shall be a 30-minute debate to be equally divided and controlled.

UP AMENDMENT NO. 87

Mr. DANFORTH. Mr. President, I send to the desk an amendment and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk proceeded to read the amendment.

Mr. DANFORTH. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 12, delete lines 5 and 6 and insert in lieu thereof the following: "or irrevocable, shall be dissolved or amended by May 15, 1978, by the creating party to permit the disclosures required by this rule unless, prior to that date, the minimum requirements for a blind trust are defined by a rule of the Senate or by statute and the trust involved meets the requirements of that rule or statute."

On page 53, between lines 19 and 20, insert the following new section:

"SEC. 310. (a) The Committee on Governmental Affairs shall review the desirability of establishing rules and regulations for the establishment and maintenance of 'blind trusts', or other similar financial arrangements, by high-level government officials (including Members, officers, and employees of the Senate) during their period of governmental service.

"(b) The committees shall report the results of their review under subsection (a), together with their recommendations to the Senate within one hundred and eighty days after the day on which this resolution is agreed to.

(c) The recommendations of the Committee on Governmental Affairs shall be referred to the appropriate committee for a period not to exceed 60 days.

On page 53, line 20, strike out "Sec. 310," and insert in lieu thereof "Sec. 311."

Mr. DANFORTH. Mr. President, the terms of this amendment have been twice described very clearly by the Senator from Wisconsin. Therefore, I do not know there is much more to say about it. It provides, in substance, that the terms of the resolution, as now stated, will remain in existence unless changed by rule or by statute with re-

spect to blind trusts, but it also provides that the Committee on Governmental Affairs will consider the desirability of a rule or a statute dealing with the problem of blind trusts and approaching the matter not only from the standpoint of the Senate but also from the standpoint of the three branches of Government, Congress as a whole, and the executive and judicial branches as well, that the Governmental Affairs Committee will report its findings in no more than 180 days, and that the matter will then be referred to the appropriate committee of the Senate for not more than 60 days. That is the substance of the proposed amendment.

Mr. NELSON. Mr. President, we have discussed this proposal over the period of the last 2 days. A number of Senators have looked at it. I think the amendment accomplishes exactly what we were discussing. It directs a report within 6 months on the desirability of blind trusts and, if the committee recommends a rule and standard for blind trusts and the Senate adopts it, that would substitute for the provision in the committee rule which requires the dissolution of the blind trust.

If they do not, then by May 15 the requirements for dissolution that are in the resolution would have to be met.

I think this is a good approach. I think it will give us a chance to have the benefit of some careful hearings, some testimony and evaluation by qualified trust authorities, with adequate time to report back. Since the chairman of the committee that will handle it is here and has said on the floor that that is what they would do, I am perfectly happy to accept the amendment if there is no objection from anyone.

Mr. THURMOND. Mr. President, I think the distinguished Senator from Missouri has offered a good amendment here. It goes to the Governmental Affairs Committee, where both sides can be heard, Senators can be heard, and the committee can then bring out a recommendation that would be considered by the Senate. That would appear to be a sound procedure.

Mr. NELSON. Mr. President, I yield back the remainder of my time.

Mr. DANFORTH. Mr. President, do I understand that the amendment has been agreed to?

Mr. NELSON. Yes; I will move for adoption of the amendment.

The PRESIDING OFFICER. Do both sides yield back the remainder of their time?

Mr. DANFORTH. I would just simply like to express, Mr. President, my appreciation to the Senator from Wisconsin, the Senator from Connecticut, and the Senator from Oklahoma for their very good counsel to this freshman Member of the Senate during the last 2 or 3 days on this matter.

The PRESIDING OFFICER. All remaining time having been yielded back, the question is on agreeing to the amendment of the Senator from Missouri.

The amendment was agreed to.

The PRESIDING OFFICER. Under the previous order, the Senator from Maine (Mr. HATHAWAY) is recognized to call up an amendment on which there shall be 1 hour of debate, to be equally divided and controlled.

The amendment will be stated.

UP AMENDMENT NO. 88

Mr. HATHAWAY. Mr. President, I send an amendment to the desk.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Maine (Mr. HATHAWAY) proposes an unprinted amendment numbered 88:

On page 45, line 8, after 'his own conduct,'—

Mr. HATHAWAY. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 45, line 8, after "his own conduct," insert the following: "the conduct of any officer or employee he supervises, or the conduct of any employee of any officer he supervises,".

On page 45, line 10, after the period, insert the following: "For purposes of this subparagraph, a Member of such Select Committee shall be deemed to supervise any officer or employee consistent with the provision of paragraph 12 of Rule XLV of the Standing Rules of the Senate.".

Mr. HATHAWAY. Mr. President, this first amendment I understand the manager of the bill will accept. The amendment requires that members of the Select Committee on Ethics shall disqualify themselves from participating in any review or investigation dealing with the conduct of officers or employees under their supervision. I think this amendment can be readily disposed of before I begin to discuss the more controversial amendment I intend to call up next.

The code, as presently drafted, requires that members of the committee disqualify themselves only from consideration of complaints dealing with their own conduct or of complaints they themselves have filed.

In order to insure fair and equitable treatment of all officers and employees and to protect the committee and its members from any charges of bias or favoritism, it makes a great deal of sense to require automatic disqualification of Members whenever charges are leveled against any individuals they employ.

Unless this disqualification procedure is automatic, the potential for conflicts and apparent conflicts is obvious. Members who chose not to exercise their discretionary authority to disqualify themselves would risk being charged with fixing the case, in the event that charges against their own employee were dismissed. And Members who stepped aside under the discretionary authority would risk being charged with avoiding their duty to serve to the fullest extent possible on the committee. In addition, Members who chose to participate in cases directly involving their own employees could adversely affect the scope and direction of the investigation, whether intentionally or unintentionally.

If the Ethics Committee is going to act as a quasi-judicial body with regard to charges brought before it, it is important that it follow the rules generally applied to such bodies, and scrupulously avoid any conflicts and apparent conflicts. This amendment will insure that this goal is achieved and that the integrity of the committee and the Senate as a whole is preserved.

Mr. NELSON. Mr. President, do I understand that this amendment by the Senator from Maine is that if an employee or staff member of a member of the Ethics Committee is the subject of a complaint under the provisions of the rules of conduct, the Senator employing that staff member must disqualify himself from participating in the proceeding?

Mr. HATHAWAY. The Seantor is correct.

Mr. NELSON. I have no objection to that. I would think that is what the Member would do. So I am perfectly willing to accept that amendment.

Mr. President, I yield back the remainder of my time.

Mr. HATHAWAY. Mr. President, I yield back the remainder of my time on that amendment.

Mr. CHAFEE. Mr. President, has this first amendment been adopted?

The PRESIDING OFFICER. The Senate is about to act. All remaining time having been yielded back, the question is on agreeing to the amendment.

Mr. CHAFEE. Mr. President, I would like——

The PRESIDING OFFICER (putting the question). The yeas have it. The amendment is agreed to, and the Senator from Rhode Island is recognized.

Mr. CHAFEE. That went a little fast.

Mr. NELSON. Did the Senator——

Mr. CHAFEE. I have no objection, but I just wanted to make sure Senators understood that. As I understood, it only provided that if a staff member of a member of the Ethics Committee is brought before the Ethics Committee, that member cannot vote on that particular matter.

Mr. HATHAWAY. That is correct.

Mr. NELSON. Yes; I did not intend to move it that quickly. I believe this is a standard that we would follow without a rule.

Mr. DOLE. Mr. President, will the Senator yield?

Mr. NELSON. I yield.

Mr. DOLE. This being a full-time body, I just wanted to check and see what it did.

Mr. NELSON. Does the Senator wish me to yield on that particular point?

Mr. DOLE. No; after looking around, I do not believe there is any necessity.

Mr. HATHAWAY. Has that amendment been voted upon?

The PRESIDING OFFICER. The amendment has been agreed to.

Mr. HATHAWAY. Mr. President, I send another amendment to the desk.

The PRESIDING OFFICER. The Chair is advised that under the previous order, the Senator from New Hampshire (Mr. DURKIN) is to be recognized to call up an amendment, on which there is to be 2 hours of debate. The Senator from Maine had an order to be recognized for one amendment.

Mr. HATHAWAY. In my informal dis-

cussions with the floor manager, he agreed to accept this amendment we have just adopted, and that the hour would be left to me to bring up the more controversial amendment.

Mr. NELSON. The time was yielded back.

Mr. HATHAWAY. That was on the amendment which we agreed would not count toward the time limitation.

The PRESIDING OFFICER. Is there objection to the Senator from Maine offering another amendment at this time?

Mr. BIDEN. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. BIDEN. Can the Senator from Maine tell us how long he is going to be on the second amendment, how much time?

Mr. HATHAWAY. If the Senator will yield, I do not intend to discuss it, myself, more than half an hour, but we have an hour reserved, and I think it is controversial and we may very well use up the entire hour.

The PRESIDING OFFICER. Is there objection?

Mr. DURKIN. Mr. President, reserving the right to object, what is the question?

Mr. ALLEN. The question is whether to let him go ahead of you or not.

The PRESIDING OFFICER. The Chair is advised that unless there is an agreement otherwise, there would be 2 hours allowable on that item, because there was 1 hour allowable under the previous order for the other amendment.

Mr. HATHAWAY. I would agree to limit the time to 1 hour.

The PRESIDING OFFICER. Is there objection?

Mr. DURKIN. Mr. President, reserving the right to object, I was up. I have no objection to accommodating my friend from Maine, but I would just like to appeal what has happened.

Mr. HATHAWAY. Mr. President, if the Senator will yield to me, I will be glad to explain what happened. Last night I received an hour for an amendment that was going to be fairly controversial. I had an additional amendment that was noncontroversial; I thought it would be all right, during that hour, to have that amendment accepted before going on to the controversial one, on which I reserved time last night. The noncontroversial one has been accepted, and I requested permission to proceed, because I suppose technically I am not now covered for the required period of time.

The PRESIDING OFFICER. The Senator from Maine is correct.

Mr. DURKIN. Then subsequent to that hour, will we proceed to the amendment that Mr. BIDEN and I have offered?

The PRESIDING OFFICER. Is there objection to the Senator from Maine offering another amendment on which there is a time limitation of 1 hour, then to be followed by the Senator from New Hampshire?

Mr. NELSON. Mr. President, the Senator from Wisconsin would like to know, before we take the amendment out of order, what the proposal is. I noticed that the Senator from New Hampshire said that he would like to get a feel of what was going on. I would like to suggest to the Senator from New Hampshire that the actions of the Senator from Maine are so smooth that very frequently you do not feel anything until you try to turn your head. So I would like to know what is in the proposed amendment before I consent to taking it out of order.

Mr. HATHAWAY. This is a rather innocuous amendment which clarifies the definition of earned income in proposed rule 44.

Mr. NELSON. Is it addressed to the earned income section?

Mr. HATHAWAY. Yes. It relates to the language on page 25 and then to one of the exceptions listed on page 26, to wit, the family enterprise exception.

Mr. CHAFEE. Does this amendment have a number?

Mr. HATHAWAY. It is an unprinted amendment, but I have copies which I will be glad to distribute to those interested.

Mr. NELSON. I realize now what the Senator is addressing himself to, as I understand it. It is using that earned income definition from the House language. Is that correct?

Mr. HATHAWAY. The Senator is correct.

Mr. NELSON. We have been discussing that issue off and on, trying to work something out, which we have not yet concluded. I would advise the Senator that, as I read this amendment, the Senator is traveling in a different direction from which I have been traveling.

Mr. HATHAWAY. The Senator from Maine anticipated that earlier in the day. I was quite surprised by the committee's direction, and that is why I am offering the amendment.

Mr. NELSON. Would the Senator rather have it voted upon in the next hour or wait until after the Senator from New Hampshire presents his amendment and have it voted upon then?

Mr. HATHAWAY. Is the Senator indicating we might be able to work out some agreement by deferring it?

Mr. NELSON. It would be helpful if we had a chance to discuss it. We are trying to resolve the problem which the Senator is raising. Maybe we can resolve it and maybe we cannot.

Mr. HATHAWAY. I would be glad to follow in whatever place on the roster I am given to present the amendment.

Mr. NELSON. Before we conclude tonight there may be another unanimous-consent agreement to take up amendments in a certain series and we could include the Senator's amendment in the list for tomorrow.

Mr. HATHAWAY. If the Senator will yield, I would like to know what the order is at the present time.

The PRESIDING OFFICER. The order now calls for the Senator from New Hampshire with an amendment with a 2-hour limitation; the Senator from Kentucky with an amendment with a 2-hour limitation, and the Senator from New Mexico with an amendment with a 1-hour limitation.

Mr. HATHAWAY. After that, Mr. President, there is no one listed. I could go back to my office until about 11 o'clock tonight.

Mr. NELSON. We could agree to take up the amendment of the Senator at 11 o'clock tonight.

Mr. HATHAWAY. If the Senator thinks we can work this out in the next hour or so, I would be glad to do so. I would relinquish my time now if the Senator believes we can work out some language in the next hour or so.

Mr. NELSON. I would not want to make any prediction, but the staff and others are addressing themselves to the specific area this amendment addresses. I think it might be helpful if it were delayed until tomorrow.

Mr. HATHAWAY. Mr. President, I ask unanimous consent that I be allowed to call up my amendment at the end of your list with a 1 hour time limitation.

The PRESIDING OFFICER. Is there objection?

Mr. CHAFEE. Wait a moment.

Mr. NELSON. I do not think we can engage in a unanimous-consent agreement on specific amendments right now. The Senator will be guaranteed the opportunity to call up his amendment. The leader may already have some agreements of which I am not aware. Will the Senator withhold his request? He may be assured that when the time comes, if he desires to bring up his amendment, he may. I think an amendment will be offered. It may very well be that at the appropriate time, if agreement is not reached on this issue, the Senator from Maine may want to offer his amendment as a substitute to whatever is proposed. We can work it all out at the same time.

Mr. CHAFEE. Very well.

The PRESIDING OFFICER. The Senator from New Hampshire is recognized to call up his amendment.

AMENDMENT NO. 124

Mr. DURKIN. Thank you, Mr. President.

Mr. President, I call up amendment No. 124, which is proposed by myself and Mr. BIDEN.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from New Hampshire (Mr. DURKIN), for himself and Mr. BIDEN, proposes amendment No. 124.

Mr. DURKIN. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 25, line 19, insert the following:

(c) A Senator shall not receive any honoraria from any person, organization, or corporation having a direct interest in legislation before the Congress or from any foreign national.

(d) For purposes of subparagraph (c), only the following shall be deemed to have a direct interest in legislation before the Congress:

(1) a person, organization, or corporation registered under the Federal Regulation of Lobbying Act of 1946; a person who is an officer or director of such a registered lobbyist; a person who has been employed or re-

tained by such a registered lobbyist for the purpose of influencing legislation before the Congress; or

(2) a corporation, labor organization, or other organization which maintains a separate segregated fund for political purposes (within the meaning of section 321 of the Federal Election Campaign Act of 1971 (2 U.S.C. 441b)), a person who is an officer or director of such corporation, labor organization, or other organization, or a person who has been employed or retained by such corporation, labor organization, or other organization for the purpose of influencing legislation before the Congress.

Mr. DURKIN. Mr. President, at this time I ask unanimous consent that the time be limited to 30 minutes to a side.

The PRESIDING OFFICER. Is there objection?

Mr. NELSON. I apologize to the Senator from New Hampshire. I did not hear his request.

The PRESIDING OFFICER. The request is that the time be cut from 2 hours to 1 hour equally divided.

Mr. NELSON. That is satisfactory to the Senator from Wisconsin.

Mr. DURKIN. I thank the Senator.

The PRESIDING OFFICER. Without objection, it is so ordered. The Senator from New Hampshire is recognized.

Mr. DURKIN. Mr. President, the amendment is a very simple amendment. It tracks with the theory set forth in the committee resolution.

Mr. President, I am not saying that honoraria are wrong or unethical, per se. I am not saying that honoraria are unethical except in those cases where it influences conduct as a Senator, either in committee, on the floor, or in between.

In many cases, as we have heard in debate in the last 3 or 4 days, there are many situations where honoraria can be perfectly ethical. We are not casting aspersions on any Member, past or present, with respect to honoraria.

But I believe there is a public perception, and we have heard enough about public perception, with respect to how much can be earned by way of outside earned income.

As I say, I believe there is a second public perception. While I do not agree completely that the amount is a major problem, I do think all citizens in America have uneasy moments when they think that Senators are accepting honoraria, speaking fees, fees for writing articles, or receiving funds for their personal use. That is how it is perceived by the citizens back home.

Mr. President, can we have a little order to go along with the ethical conduct?

The PRESIDING OFFICER. Let us have order in the Senate, please. Will those conversing in the aisles take their seats or retire to the cloakrooms?

Mr. DURKIN. I thank you, Mr. President.

I believe the public perception is that in some cases people who have a direct interest in legislation before the Congress are offering honoraria. They feel people are accepting and using funds for personal purposes—funds from lobbyists, funds from people in the political action committees. It speaks for itself that those in political action committees are interested in influencing legislation before the Senate as well as the House.

Our amendment basically states that it is unethical to receive honoraria, speaking fees, or money for articles from those who are registered lobbyists or those maintaining a political action fund.

This was debated quite extensively earlier in the deliberation. At that time, there was an elimination of the provision whereby we could earn more than 15 percent in honoraria if we were to give that to charity. That provision caused some difficulties. That provision, I think, was misconstrued as an attack on charitable giving, which it was not. In any event, we have eliminated that provision from amendment No. 124.

I think that, by the fact that the Senate has limited honoraria, it expresses our concern with the perception that accepting honoraria from those who have an interest may well raise ethical questions. The limit established eliminates the problem to a certain degree. However, I think we should go all the way and make it unethical for anyone to accept honoraria or fees from lobbyists or those with political action funds.

I wish to read from the resolution. On page 22 of the resolution, starting on page 21, with respect to gifts, the resolution that the committee puts forth says:

2. (a) No Member, officer, or employee of the Senate, or the spouse or dependent thereof, shall knowingly accept or knowingly permit his spouse or dependent to accept, directly or indirectly, any gift or gifts having an aggregate value exceeding $100 during a calendar year directly or indirectly from any person, organization, or corporation having a direct interest in legislation before the Congress or from any foreign national.

The committee has recognized the problem and they say you cannot accept a gift from lobbyists or those with political action funds, but you can accept honoraria. I think that in many cases, accepting honoraria from those aggressively pursuing legislation before this body is nothing more than a gift. We have prohibited gifts, we have required that it be made a part of the RECORD if the dinner is $35 or more. Yet you can sit down for a very brief period and pick up a $1,000 fee from the very same groups. If this whole code is an effort to satisfy the apprehension, the justifiable apprehensions of the citizens back home and restore public confidence or begin to restore public confidence in this Chamber, I think the rationale for the prohibition on gifts should be extended to the prohibition or to finding unethical the acceptance of honoraria from lobbyists or those having political action funds.

In reading from the report on page 32, it says:

The second aspect of this provision—

The gift provision I have just referred to—

is more important. Members, officers or employees of the Senate should not accept gifts which they know or should have reason to know were given with the intention of influencing their performance.

I submit nobody has ever offered an honorarium to make an enemy. No group that has offered honoraria has done so to be sure that one would forever be opposed to their legislative proposition. I think if everyone takes a minute to think about it, this would be a much stronger code if we not only perpetuate the limit, but also eliminate the appearance of accepting honoraria and thereby the appearance of unethical conduct, in some cases, by declaring it unethical to accept honoraria from certain sources.

It is a very simple amendment. As I say, it speaks for itself. It has been debated quite at length before and I do not think it needs any further explanation.

At this time, I yield, without losing my right to the floor, to the Senator from Delaware, who has joined me in this amendment.

Mr. BIDEN. Mr. President, I rise in support of this amendment I shall try to be brief, to leave some time to respond to those who may take opposition to this amendment.

I listened with a great deal of interest and amusement last night to the debate on the so-called Muskie amendment limiting the amount of honoraria or lecture fees, whatever term you want to use, that a U.S. Senator was able to accept. Having been one of those Senators that, since I have been here, have made "the limit," I had some mixed emotions watching that debate go on. I finally agreed that the Senator from Wisconsin is correct, that if a line were to be drawn and if we admitted that there should be a line drawn anywhere, $8,600 was as logical a place to draw the line as $25,000. So I supported the Senator from Wisconsin and the Ethics Committee.

But, as I pointed out then, I think we have all missed the mark. We are all looking for an easy way out on the question of honoraria and outside income, because the real issue, it seems to me, if you talk ethics, is conflict. That is the issue. It is not the amount. It is not how much you make, because the whole basis and rationale for this entire bill is that outside income creates a potential conflict, a conflict in time, which I think is a specious argument, or a conflict of interest in that the activity that you are engaged in for financial gain in some way tends to compromise you or prostitute you as a U.S. Senator.

If that is one of the bases for this legislation, then it seems to me inescapable, the conclusion that we should deal with the question of conflict. To do that, we must deal with the question of source, and the source of the honoraria is the only place you can look to to determine whether or not there is a potential conflict.

So, if that is the logic of this bill, which I have been told time and again for the past several days it is, I do not know how we can escape the conclusion that if it is a potential conflict for a lawyer to maintain a practice because he or she may have a client come to him or her who has an interest before Congress, and the only reason that they would come to that Congressman lawyer would be because of the position of that attorney as a Member of Congress, then we must apply the same standard to any

other fee, any other earning that is made by a Member of Congress.

Now, since I have been in the U.S. Senate, which has not been very long, I have applied, from the first day that I came here, the standard that I would accept no fee from a group which, in fact, had a potential interest before the U.S. Congress and/or any group from within my State—a University, for example. It is self-imposed. I never made that public until the day before yesterday, because I think that to make it public sort of impugns the integrity of those who have a different standard, which is unfair.

I do not say that anyone who accepts an honorarium from a labor group, or an AMPAC group, a business group, a chamber of commerce, does anything unethical. I think that, the more I think about this legislation, probably Senator WEICKER was right: We should just have disclosure, period. But we are already into this box. We have taken a giant step forward or backward, depending upon how you look at it, and we might as well do the whole thing the right way. What is good for the goose is good for the gander. If, in fact, we say that there are those potential conflicts from outside income as a consequence of the practice of law or medicine or architecture or anything else, we should apply the same standard to honoraria.

Otherwise, I think we are creating a bit of a sham. So it is very simple, the amendment states that any group which is covered by the Lobbying Act of 1946 or the Federal Election Campaign Act of 1971, section 321, is a group, for purposes of this definition, that a U.S. Senator should not accept honoraria from.

Again we can argue about where the potential conflict lies. We can say there is a potential for conflict in accepting any honoraria anywhere at any time.

I submit we can apply the same argument to earned income and unearned income that we have discussed for the past several days and we come down to the spot that the Senator from Wisconsin arrived at last night saying that we must draw a line somewhere.

So the logical place for the line we have drawn in terms of definition of lobbying groups in the law, since 1946, is the standard the Senator from New Hampshire and I have applied.

So I hope that we go the entire route in this great effort to purge ourselves before the American public to let them know we are all good guys and somehow we want to avoid any potential appearance of conflict. Let us not leave this glaring potential existing after we close up all the other potential conflicts we have.

Mr. DOLE. Will the Senator yield?

Mr. BIDEN. Yes, I will.

Mr. DOLE. I think the Senator and the Senator from New Hampshire probably put their finger on the problem. Once having done that, I assume they are talking about any group that might have direct interest in legislation.

Because of conflict of interest, we could not accept an honoraria from that group. Is that essentially what the Senator's amendment does?

Mr. BIDEN. Essentially.

Mr. DOLE. We could still speak on a college campus or fundraising for our party, be it the Senator's party or mine?

Mr. BIDEN. Yes.

Mr. DOLE. That would be allowed?

Mr. BIDEN. Yes, it can.

Mr. DOLE. I think that is the direction we should be moving, rather than imposing arbitrary limits. But in addition to doing that, the Senator keeps the arbitrary limit.

Mr. BIDEN. If the Senator will yield for a moment, quite frankly, I am just being very pragmatic about this.

I read the vote yesterday. The Senator from New Hampshire and I would have preferred to introduce our amendment prior to the Muskie amendment. But the fact of the matter is we could not.

I think it would be, quite frankly, a fruitless exercise for us at this point to deal with the limit. I do not give a darn whether it is 25,000, 8,000, 50,000, or what it is.

But if we decide to go after honoraria and we deal with that question, it all seems to me inescapable, we get to here. But we are now confronted with a practical fact of life. I counted 67 votes yesterday against raising the limit.

So, as has often been said, politics is the art of the practical. I want our amendment to pass. I feel, certainly, if we attach an alteration of the amount able to be earned to it now, it would go down in flames in light of the glaring eloquence of the Senator from Wisconsin who would begin to take out his violin again and tell us about how, in fact, the line had to be drawn in the public interest at $8,600.

Mr. DURKIN. Furthermore, in response to the Senator from Kansas, I brought up this amendment last Friday and it got buried, tabled 76 to 15.

We tried to get it up earlier and tried to pursue it.

I, for one, think in many cases disclosure is adequate, but that avenue has been pretty much foreclosed.

The committee realized that accepting honoraria from certain groups can very well—and I do not think we need a Phi Beta Kappa key to realize it—in some instances be a conflict of interest.

Mr. DOLE. If the Senator will yield, the Senator from Kansas does not quarrel with that. But after we have addressed ourselves to that problem, clarified the possible conflict, why does the Senator concern us with this arbitrary limit, why do that once he has avoided any conflict of interest with his amendment?

Mr. DURKIN. There are two problems the committee perceived. One problem, the amount, and the argument of the time.

I think that aspect was discussed by the Senator from Maine and the violinist from Wisconsin.

But once they have gone down that road and we start out, I think limiting it was not the most effective.

I think the most appropriate remedy would have been to specify we could not accept it from certain groups, and full disclosure.

We have to deal with the real world. We were not presented with that option. As I say, I brought that up last Friday and we took a beating with that amendment—76 to 15, I think.

Mr. MUSKIE. Will the Senator yield?

Mr. DURKIN. Yes.

Mr. MUSKIE. Pursuant to the line of the distinguished Senator from Kansas, I suppose I am overly sensitized to discrimination and treatment as a result of the votes yesterday, but rule XLV, posed by the committee, reads as follows, and this applies to both unearned and earned income:

> No Member, officer or employee shall engage in any outside business of professional activity or employment for compensation which is inconsistent or in conflict with the conscientious performance of his official duties.

I take it the implication of that language is to inhibit or restrict the very thing the Senator's amendment is designed to inhibit or restrict with respect to all outside income.

If the Senator proposes a stricter standard than that on earned income, I find it hard to understand why he does not apply the stricter standard to unearned income as well as earned income.

The Senator seems to have the same instinct as the committee, to zero in on one form of outside income while not doing so with respect to others.

I mean, if the organization of the outside activity meets the standard of the Senator's amendment, why then should we permit people to get investment income from——

Mr. DURKIN. If the Senator will yield——

Mr. MUSKIE. If I might finish my question.

Why then should we permit people to get investment income from the same kinds of organizations?

I find that very difficult to understand. I explored the possibility earlier to the Senator of expanding it in order to include it and the Senator sent back the message that he was not interested in that.

So I cannot resist asking him why he persists in closing his eyes to similar conflicts from unearned income?

Mr. DURKIN. I am happy to answer that question.

This is not the only amendment that I have at the desk. I have been assured—in fact, we have a unanimous-consent agreement—that we will be able to get those amendments up before the debate is concluded.

I have another amendment, No. 101, which applies the same conflict of interest standard that is required of Federal judges, that they not participate—and the Senate not vote—once they have disclosed that portfolio, that they cannot vote on issues that would affect their performance. If they have a bundle of oil company stock, then they cannot vote on oil company stock. That is another problem.

Mr. MUSKIE. That is not quite as strict a sanction as depriving them of the income. Why does the Senator not apply that standard to earned income?

Mr. DURKIN. I do not think it is practical.

Mr. MUSKIE. I know it is never practical when it applies to earned income. It is only practical when it applies to unearned income, as I find the Senate is disposed.

Mr. DURKIN. I think the problem is that if someone came to this body with a big block of oil company stock——

Mr. MUSKIE. Is that not salable on the market? We ask people in the executive to divest themselves.

Mr. DURKIN. I ask of the Senator the same respect he asked of me, to be allowed to answer or to state a question. I was trying to reply.

The point is that if someone came to this body with a block of oil company stock, I do not see any way under our Constitution by which he can be forced to divest himself of that stock. I think it can be put in a blind trust, and the committee accepted the Danforth amendment. However, I think it can be said that it is unethical for that person to vote on that stock and vote the interest.

Mr. MUSKIE. I ask the Senator this: I do not believe that it is constitutional to divest Members of the right to earn conflict-free income. That did not deter the Senator from voting for an amendment that has that effect. I do not understand this one-sided deterrent effect of the Senator's approach to these problems.

Mr. BIDEN. Mr. President, will the Senator yield?

Mr. DURKIN. I yield.

Mr. BIDEN. Mr. President, how much time remains on this side?

The PRESIDING OFFICER. Three and a half minutes.

Mr. BIDEN. The Senator from Maine is right.

Mr. DURKIN. I reserve 2 minutes.

Mr. BIDEN. He is right from the standpoint of the Senator from Delaware. But, again, in response to the Senator from Kansas, the reason why the Senator from Delaware cosponsored this one is that it is the only one that can win now. I will be happy to join the Senator from Maine in a fight with respect to the second portion of the question, of applying the same standard to earned income. But I want to make sure that we tie them up one at a time.

I watched the vote last night, and I have watched the votes the last 3 days. If we tie this amendment to earned income, it will not be agreed to, in my judgment. I would like to have it adopted, and then I will stand on the floor and fight with the Senator—not as eloquently as he—as long as he wants to see if we can have it adopted for earned income. That is just practical politics.

Mr. MUSKIE. What the Senator is saying is that we are going to discipline only those who do not have the votes to protect themselves.

Mr. BIDEN. What the Senator is saying is that we discipline where discipline is needed, as much as we can. Discipline is needed here, and discipline is needed with regard to earned income. The mere fact that we allow unearned income to go undisciplined is not a logical argument to allow earned income to go undisciplined.

Mr. MUSKIE. Earned income does not go undisciplined, under the language which I read, I remind the Senator. It is the same standard that is applied——

Mr. DURKIN. Mr. President——

Mr. MUSKIE. I am not to speak, either, I gather.

Mr. DURKIN. I reserve the last 2 minutes.

Mr. President, will the Senator from Wisconsin yield some time to the Senator from Maine?

Mr. NELSON. Mr. President, how much time do I have remaining?

The PRESIDING OFFICER. The Senator has 30 minutes.

Mr. NELSON. Before I yield any time, is the Senator willing to give us another virtuoso performance, as he did Friday night?

Mr. MUSKIE. No. I am just going to say one thing.

Mr. NELSON. How much time does the Senator want?

Mr. MUSKIE. Thirty seconds.

Mr. NELSON. I yield the Senator 1 minute.

Mr. MUSKIE. I think this is another one of those phony amendments. I support this, as I support the language in committee amendment No. 45, which says that you should not accept income that is in conflict with your duties as a Senator. But I am not interested in this one-sided standard business which the Senator from New Hampshire is prone to adopt, as the committee was. I will support the amendment if it is applied to unearned income. The fact that the Senator can get votes only to apply it to earned income shows that he is interested in a one-sided standard.

Mr. DURKIN. Every journey starts with a first step.

Mr. MUSKIE. It certainly does.

The PRESIDING OFFICER. Who yields time?

Mr. DURKIN. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. DURKIN. I understand that the unanimous-consent agreement is that we have an up or down vote on this amendment, not a tabling motion—the same privilege that was accorded to the Senator from Connecticut.

Mr. NELSON. I do not have the unanimous-consent agreement.

The PRESIDING OFFICER. That is not the unanimous-consent agreement. The agreement only limited time.

Mr. DURKIN. I hope that our favorite violinist will not vote to table. I think this is one amendment on which we should have an up-and-down vote.

Mr. NELSON. There is no agreement on that. I think I should move to table; but if the Senator wants more time, I will yield whatever time we have not used.

Mr. BIDEN. Mr. President, will the Senator yield me 5 minutes, to ask some questions?

Mr. NELSON. I yield 5 minutes to the Senator, to ask some questions.

Mr. BIDEN. I am curious. What objection does the Senator from Wisconsin have to this amendment?

Mr. NELSON. The committee set a level on honoring which was quite low, as everybody has conceded; and rather than try to distinguish the various groups who might pay honoraria, we decided that the low limit would be the best approach. It would limit or solve the problem of appearances of impropriety.

What we did on the lobbying section was to allow a gift of $100 and not above that. But we decided on honoraria, in looking at it, to set a rather strict limit as the best way to handle that problem. Everyone has his own view. My view was expressed last night.

My main concern as to the level of outside income is with how the people of the country who pay our salary, will react if we have an outside income that is twice the median income of the average family. That is my main concern.

Appearances of conflict are important. I have not been informed of any case of conflict of interest respecting speaking, and it is a very difficult thing to determine. I have followed the practice that the Senator from Delaware says he has followed. I have looked at invitations, and if they could have the appearance of impropriety, I have given the money away, so that over the years, on the average, about one-half of what I have earned in honoraria, after expenses and taxes, has gone to environmental causes. If any of those, from my viewing it, could have an appearance of conflict, I have made a practice of contributing the money to somebody else.

In any event, the committee looked at it, considered it, and thought that the control of a limitation of 15 percent was adequate to meet the kind of problem we are dealing with.

Mr. BIDEN. The Senator did that in part, I assume, because he is concerned, as he mentioned last night, that constituents would be upset with Senators making twice as much on the lecture circuit as the median income of an average American family. I do not know about the Senator's State; I know my State.

I ask the Senator about his State. Does he think that his constituents would be more upset with his making $24,000 by speaking before groups not defined in this act or accepting $10,000 from labor groups? What does he think?

Mr. NELSON. Do I think what?

Mr. BIDEN. The Senator has indicated—and everyone else on this floor has indicated—that the basis for much of this legislation is the matter of appearance in the eyes of the American public. The Senator asked last night, quite eloquently, how can we justify a Senator making an outside income twice the median income of the average American family? So the Senator went to the matter of amount and spoke to that issue.

I ask this of the Senator: What does he think upsets his folks back home more, that he would receive this income from

groups that had no interest before Congress or that he would accept $15,000 in honoraria from the AMA or the Jewish Defense League or the AFL-CIO? What does the Senator think would offend them more?

Mr. NELSON. I do not know which would offend them more. I do not accept any from labor unions, so I do not know.

In any event, disclosure has been involved in honoraria for quite some time.

We have both addressed ourselves to the same question. We decided that the limitation of 15 percent was an adequate control to avoid the question of conflict, if that is the problem, or the appearance of conflict.

As I said, I do not know of cases of conflict. Conflict is very hard to define. As to the whole spectrum, from absolutely no conflict to an absolutely clear case of conflict, if you ask 1,000 people where they draw the line, you will receive 1,000 different lines, because people have a different viewpoint of what appears to be a conflict.

So, in looking at the whole thing, we simply decided on that limit. It satisfied the committee. It does not satisfy the Senator from Delaware; it does not satisfy the Senator from New Hampshire. We will just vote on it.

Mr. BIDEN. But the Senator had no problem in deciding that issue with regard to gifts.

Mr. NELSON. Yes, we had a problem in it. We put a $100 exemption in there.

Mr. BIDEN. But you also said certain groups could not.

Mr. NELSON. Yes, we did.

Mr. BIDEN. What was the rationale for that? Why not just put a limit and not mention groups at all? Why not just say that, you know; why bother to define lobbying groups? What was the purpose of that?

Mr. NELSON. We sat and we evaluated and we came to the conclusion on that problem that that was the best way to handle it, on this problem that was the best way to handle it.

If you hand this resolution over to 100 Senators here and 435 Members over in the House of Representatives, and you ask them all to come back with a proposal, you would have 535 different proposals.

Mr. BIDEN. Right.

Mr. NELSON. As the Senator knows—he is a very knowledgeable, able, and perceptive Member of the Senate, and a member of committees—that when one gets all through marking up a piece of complicated legislation with 15 members on the committee, with 15 different viewpoints, you finally come to a conclusion which is a compromise.

I have never seen a complicated piece of legislation—and this is complicated—come out of any committee I have ever served on without compromise. I have been on the Public Works Committee under the distinguished Senator from Maine; I am on the Labor Committee, I am on the Finance Committee, I am chairman of the Small Business Committee and I, at one time, had 21 subcommittees—and every piece of legislation was hammered out, and when it came out of that committee, almost invariably I would have loved to change 25 percent of it, because I did not like it.

This resolution was reported 15 to 0. That did not mean everybody there agreed to it. The Senator from New York voted with the Senator from Maine on the question of income limitation; Senator PACKWOOD, also on the committee, voted in the 15 to 0 vote, and he voted with the Senator from Maine.

There are other amendments here. I was on the committee, and there are changes in the resolution I am going to support. The handling of honoraria was a compromise. We were satisfied with it, so let us vote.

Mr. BIDEN. Let me conclude by saying one thing: If you are talking about appearances here I still find it very difficult to explain to the folks back home that when you are sitting on the Banking Committee you accept a $1,000 honorarium from the banking groups. If you are sitting on the Labor Committee you accept a $1,000 honorarium from labor groups. If you are sitting on the Foreign Relations Committee, and you accept $1,000 from the Arabs or the Jewish organizations in America, I just think that is such a glaring appearance of conflict of interest that I do not know how you passed it up. But I think we should vote, too.

Mr. DURKIN. Mr. President, will the Senator yield?

Mr. HATHAWAY. Mr. President, will the Senator yield for a question? It seems to me that the restriction the Senator from New Hampshire has placed here in subparagraph (d) "only the following shall be deemed to have a direct interest in legislation before the Congress," is too narrow to achieve his goals. It means that any organization—take a university, for example, would not be subject to this provision because it is not a lobbying organization within the definition. Nevertheless, most universities have an association that does the lobbying for them, and the association is covered. So all you are going to achieve by this amendment is to encourage organizations otherwise governed, to come up with a different kind of an organization, spinoff the lobbying activity into that new organization and thereby insulate the original organization totally from this provision. The university is just as much interested in the Higher Education Act, the university to which you are speaking, as the lobbying organization for them. But paradoxically the lobbying organization is the only entity that is restricted. Under the Senator's amendment, you cannot speak before the organization, but you can speak before the university.

It seems to me that is an unwarranted distinction, because certainly the university and other businesses or organizations as well, are as much interested in legislation as the lobbying organization or any other entity that is required to register under the Lobbying Act.

The PRESIDING OFFICER. The time of the Senator from New Hampshire has expired.

Mr. HATHAWAY. Mr. President, will the Senator yield?

Mr. DURKIN. Parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. DURKIN. This discussion has been on the time of the Senator from Wisconsin, who had 30 minutes. I still have 2 minutes.

The PRESIDING OFFICER. The Senator from New Hampshire yielded to the Senator from Maine.

Mr. DURKIN. On the time of the Senator from Wisconsin.

Mr. NELSON. No, the Senator from Wisconsin yielded—or the Senator from Maine asked for 30 seconds, and out of my well-known generosity, I doubled the time and gave him 60 seconds. But if the Senator from New Hampshire wants 2 minutes—5 minutes?

Mr. DURKIN. Well, how much time has the Senator got? [Laughter.]

Mr. NELSON. Does the Senator from Maine also wish time?

Mr. HATHAWAY. No; the Senator yielded in order for the Senator from Maine to ask a question of the Senator from New Hampshire, and the Senator's time already ran out, so he does not have time to answer the question.

Mr. NELSON. Under that circumstance I would, of course, yield 5 minutes to the Senator from New Hampshire.

I am not going to yield any more of my time, because we have 45 or 46 amendments, and we are going to be here forever, even into next week, if we do not move along.

The PRESIDING OFFICER. The Senator from New Hampshire has 5 minutes.

Mr. DURKIN. I thank the Chair, and I thank the Senator from Wisconsin.

To answer the question of the Senator from Maine, we have not claimed infallibility in drafting this amendment. The only group that has claimed infallibility is the committee, chaired by the distinguished Senator from Wisconsin.

Mr. NELSON. I was looking at a memorandum from my office. What was the Senator's last sentence?

Mr. DURKIN. I said, in response to the question from the Senator from Maine, we have not claimed infallibility. We do not say this amendment closes every possible loophole. It closes a couple of glaring ones.

I said the only people who have claimed infallibility so far this week have been the people of the committee of which the distinguished Senator facing me is the chairman.

Mr. NELSON. I did not know we had claimed it, but I will acknowledge it if that is what the Senator wishes.

[Laughter.]

Mr. DURKIN. I realize we do everything but amend the Constitution by unanimous consent, but I did not realize we could confer infallibility as well.

In answer to the question, it does not restrict one who is speaking to a college group, student activity which is funded by the college, even though the college may belong to some group that is a member of the Association of Colleges East of the Mississippi which may have some law firm that does some lobbying for them.

It was perceived that the major thrust

was the perception back home that you are accepting honoraria from people who have a direct interest, lobbyists who had direct influence, lobbyists who are occupying the halls and seated in the President's room. That may very well be something we should look at later, but we had not tried to close every loophole.

We have tried to close what we perceive are the two major ones.

Mr. HATHAWAY. Mr. President, will the Senator yield further? It seems to me that there is a gaping loophole.

Mr. DURKIN. That is not a gaping enough loophole to justify voting against this amendment.

Mr. HATHAWAY. It is for the junior Senator from Maine.

Mr. DURKIN. I think to vote against something, because it does not solve every problem in the universe—there would be no reason for the 96th Congress to solve all the problems of the 95th—so——

Mr. BIDEN. Mr. President, will the Senator yield 10 seconds?

Mr. DURKIN. I do not think that is any reason to vote against it.

Mr. BIDEN. If there is any standard at all that can be drawn on what constitutes a lobbyist in any area it applies equally in this area. It is no different from how you determine what is a lobbyist.

Mr. HATHAWAY. It says here that only those who have to register under the Federal Regulation of Lobbying Act are governed.

Mr. DURKIN. The 1966 act.

Mr. BIDEN. How do you draw a measure of what constitutes a lobbyist?

Mr. HATHAWAY. Right here.

Mr. BIDEN. If it makes sense to determine who is a lobbyist at any point, it makes sense to draw it at this point. By your definition anyone who can have any interest in any way, at any time is a lobbyist before the Congress. Maybe we should amend the 1946 act.

Mr. HATHAWAY. What I am saying is a loophole is that an institution that has a direct interest in the Higher Education Act is not be considered a lobbyist, because there is an organization that has a lobbyist doing it for them. Only the organization is a lobbyist, and by honoraria from such an organization are prohibited.

The PRESIDING OFFICER. The time has expired.

Mr. DURKIN. Mr. President, I ask for the yeas and nays.

Mr. NELSON. Mr. President, has all time been yielded back?

The PRESIDING OFFICER. No.

Mr. BIDEN. The Senator from Wisconsin has all the remaining time.

The PRESIDING OFFICER. The Senator from Wisconsin has some time remaining.

Mr. NELSON. The Senator from Wisconsin yields back his time, and I move to table the amendment.

Mr. DURKIN. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second?

There is a sufficient second.

The yeas and nays are ordered on the motion to lay on the table the amendment of the Senator from New Hampshire.

The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. NELSON. Mr. President, may we have order, so that we can hear the call of the roll?

The PRESIDING OFFICER (Mr. RIBICOFF). The Senate will be in order. The clerk may proceed.

The rollcall was resumed and concluded.

Mr. CULVER. Mr. President, how am I recorded?

The PRESIDING OFFICER (Mr. MATSUNAGA). The Senator is recorded in the affirmative.

Mr. CULVER. I vote "nay."

Mr. CRANSTON. I announce that the Senator from South Dakota (Mr. ABOUREZK), the Senator from Montana (Mr. METCALF), and the Senator from Florida (Mr. STONE) are necessarily absent.

I further announce that the Senator from Alaska (Mr. GRAVEL) and the Senator from Idaho (Mr. CHURCH) are absent on official business.

Mr. STEVENS. I announce that the Senator from Arizona (Mr. GOLDWATER), the Senator from Idaho (Mr. MCCLURE), and the Senator from Connecticut (Mr. WEICKER) are necessarily absent.

The result was announced—yeas 72, nays 20, as follows:

[Rollcall Vote No. 67 Leg.]

YEAS—72

Anderson	Hatch	Muskie
Baker	Hatfield	Nelson
Bayh	Hathaway	Packwood
Bellmon	Hayakawa	Pearson
Bentsen	Heinz	Pell
Brooke	Huddleston	Percy
Byrd, Harry F., Jr.	Humphrey	Proxmire
	Inouye	Ribicoff
Byrd, Robert C.	Jackson	Riegle
Cannon	Javits	Roth
Case	Johnston	Schmitt
Chiles	Kennedy	Schweiker
Cranston	Lavalt	Scott
Curtis	Leahy	Sparkman
Danforth	Long	Stafford
DeConcini	Lugar	Stennis
Dole	Magnuson	Stevens
Domenici	Mathias	Stevenson
Eagleton	Matsunaga	Talmadge
Eastland	McClellan	Tower
Ford	McGovern	Wallop
Garn	McIntyre	Williams
Glenn	Melcher	Young
Griffin	Metzenbaum	
Hansen	Moynihan	

NAYS—20

Allen	Culver	Nunn
Bartlett	Durkin	Randolph
Biden	Hart	Sarbanes
Bumpers	Haskell	Sasser
Burdick	Helms	Thurmond
Chafee	Hollings	Zorinsky
Clark	Morgan	

NOT VOTING—8

Abourezk	Gravel	Stone
Church	McClure	Weicker
Goldwater	Metcalf	

So the motion to lay on the table was agreed to.

Mr. HUDDLESTON. Mr. President, I ask unanimous consent that the special order relating to my amendment be vitiated.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. NELSON. Mr. President, I move to reconsider the vote by which the motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The PRESIDING OFFICER. Under the previous order, the Senator from New Mexico (Mr. SCHMITT) is recognized to call up an amendment on which there shall be 1 hour of debate, to be equally divided and controlled.

AMENDMENT NO. 90

Mr. SCHMITT. Mr. President, I call up my amendment No. 90.

The PRESIDING OFFICER. The amendment will be stated.

The second assistant legislative clerk read as follows:

The Senator from New Mexico (Mr. SCHMITT) offers an amendment numbered 90:

On page 8, after line 16, insert the following:

Mr. SCHMITT. Mr. President, I ask unanimous consent that further reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. SCHMITT's amendment (No. 90) is as follows:

On page 8, after line 16, insert the following:

"(1) A statement of net worth as of the close of such calendar year, showing total value of assets and total amount of liabilities, the amount of gross income, the amount of adjusted gross income, the amount of taxable income, the amount of deductions claimed, and the amount of Federal income tax for the taxable year ending in such calendar year and the amount, if any, of such tax which has not been paid.".

Mr. SCHMITT. Mr. President, I ask for the yeas and nays on this amendment.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. SCHMITT. Mr. President, prior to my opening remarks, I yield 2 minutes to the Senator from Oregon.

Mr. HATFIELD. Mr. President——

Mr. NELSON. Mr. President, may we have order so that we can hear the Senator?

The PRESIDING OFFICER. The Senate will be in order. Senators will take their seats.

UP AMENDMENT NO. 89

Mr. HATFIELD. Mr. President, I request that my amendment be called up at this time.

The PRESIDING OFFICER. Is the Senator asking unanimous consent?

Mr. HATFIELD. I ask unanimous consent that my amendment be called up.

The PRESIDING OFFICER. Without objection, it is so ordered. The amendment will be stated.

The second assistant legislative clerk read as follows:

The Senator from Oregon (Mr. HATFIELD) proposes an unprinted amendment No. 89.

The amendment is as follows:

On page 28, line 20, after the word "employee" insert the following: "of the Senate compensated at a rate in excess of $25,000 per annum and employed for more than ninety days in a calendar year (unless hired on a per diem basis)".

Mr. HATFIELD. Mr. President, I have discussed this amendment, which is basically technical in nature, with the leadership of the bill. It is to bring the two paragraphs on page 28 into conformity, subparagraph 6 with subparagraph 7. What it basically does is apply the same restriction to the same people of the criterion of the rate in excess of $25,000 per annum in paragraph 6 bringing that into compliance in subparagraph 7.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. HATFIELD. I yield.

Mr. JAVITS. On what line is the amendment?

Mr. HATFIELD. I am amending line 20 on page 28 so that after the word "employee" we insert "of the Senate compensated at a rate in excess of $25,000 per annum and employed for more than 90 days in the calendar year unless hired on a per diem basis." That means simply this: We have applied that same criterion on line 13 of the same page. Conceivably we have restricted a man's professional services, but placed an undue restriction on his capacity to serve on boards and commissions.

Mr. JAVITS. May I just call the Senator's attention to one difficulty? Paragraph 6 has been construed to mean that "unless hired on a per diem basis" applies to the Member, officer or employee so, for example, he can provide professional services for compensation. We have to move that phrase in order to make clear that it does not mean that. In other words, that it only qualifies the kind of employee the Senator is talking about.

Mr. HATFIELD. I would like to modify my amendment. That is exactly what I am trying to get at. I see no problem with my amendment as offered, because that is precisely what we are trying to determine.

Mr. President, I have discussed this with Senator NELSON and the staff. I would like to either have his response or ask for a vote.

Mr. NELSON. Basically, this is an amendment which was offered as a technical amendment on the first day, but there were a couple of those offered which were considered to have some substantive effect and we withdrew them. This proposal is acceptable to the manager of the bill.

Mr. DURKIN. Will the Senator from Wisconsin yield?

The PRESIDING OFFICER. The Senator from New Mexico has the floor.

Mr. DURKIN. Will the Senator from New Mexico yield for a question?

The PRESIDING OFFICER. Does the Senator from New Mexico yield?

Mr. SCHMITT. I yield for a question.

Mr. DURKIN. I thank the Senator. The technical amendment which was offered the first day would have stricken the words "unless hired on a per diem basis." The amendment offered by the Senator from Oregon does not strike the words just mentioned. Am I correct?

Mr. HATFIELD. The answer is "No."

Mr. NELSON. I remember the Senator discussing it and I remember the Senator from New Hampshire objecting to it. He objected to item 5. Was this item 5?

Mr. DURKIN. My objection was only offered to striking the amendment offered the first day to strike the words in paragraph 6 "unless hired on a per diem basis." I understand the Senator from Oregon is not moving to strike those words, but moving just to make paragraphs 6 and 7 read the same.

Mr. NELSON. That is my understanding.

Is that correct?

Mr. HATFIELD. That was the modification.

Mr. DURKIN. The Senator is not moving to strike the words "unless on a per diem basis"? He is referring to line 20?

Mr. HATFIELD. Let me repeat the modification. We move to strike language in subsection 7, the language which was originally in the amendment "unless hired on a per diem basis," so that it reads "of the Senate compensated at a rate in excess of $25,000 per annum and employed for more than 90 days in the calendar year."

Let me explain the application of this. In the Rules Committee we are constantly being asked by various standing committees of the Senate to approve a contract for bringing on expert staff for a period of time as consultants. Under the present wording of this paragraph we would not be able to do that, because many of those experts, or many of those serving as consultants, serve on boards, and there are others, who would be restricted under this language. What we are trying to do is to keep that flexibility so we can bring in consultants from time to time on a temporary basis.

Mr. President, I ask for a vote.

Mr. NELSON. It is my understanding that after the amendment the language in item 7 would conform with the language in item 6. Is that correct?

Mr. HATFIELD. Will the Senator please repeat the question?

The PRESIDING OFFICER. Will the Senator from Oregon send his amendment, as modified, to the desk?

The amendment, as modified, will be stated.

The second assistant legislative clerk read as follows:

The Senator from Oregon (Mr. HATFIELD) proposes a modification to unprinted amendment numbered 89:

The amendment, as modified, is as follows:

On page 28. line 20, after the word "employee" insert the following: "of the Senate compensated at a rate in excess of $25,000 per annum and employed for more than ninety days in a calendar year.

Mr. JAVITS. Will the Senator yield?

Mr. SCHMITT. I yield 1 minute.

Mr. HATFIELD. Mr. President, have we acted on the amendment as modified?

The PRESIDING OFFICER. The question is on agreeing to the amendment, as modified?

The amendment, as modified, was agreed to.

Mr. JAVITS. Mr. President, will the Senator yield 1 minute?

Mr. SCHMITT. I yield 1 minute.

AMENDMENT NO. 128

Mr. JAVITS. Mr. President, I ask unanimous consent that an amendment No. 128 be called up, and I ask it only because it relates to exactly the same subject.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

The amendment will be stated.

The second assistant legislative clerk read as follows:

The Senator from New York (Mr. JAVITS) proposes an amendment number 128.

The amendment is as follows:

On page 28, lines 14 and 15, strike the phrase "(unless hired on a per diem basis)," and on line 12, after the word "Senate", insert the words "unless hired on a per diem basis".

Mr. JAVITS. The only purpose of this amendment, Mr. President, is to clarify that we are talking about a Member, officer, or employee of the Senate who is hired on a per diem basis, not the fact that if that employee is hired to render professional services to another it shall be on a per diem basis. That permits something which we did not want to permit. But by misplacing the clause we, in effect, did it, and it has been so construed, even in the summary that the Republican Policy Committee put out, or some other outfit that summarized what was in the bill. For that reason, it should be moved. This was the proper time to do it.

Mr. NELSON. It now reads more artistically than it did before. We have not eliminated anything. I have no objection.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. JAVITS. Mr. President, I thank the Senator from New Mexico.

AMENDMENT NO. 90

Mr. SCHMITT. Mr. President, I again compliment the Senator from Maine (Mr. MUSKIE) and the Senator from Connecticut (Mr. WEICKER) for over the last several days adding considerable commonsense and reason to an otherwise at times strange debate. In this debate, there has been much talk that public emotion on senatorial ethics is high; that the public demands a code of ethics; that public confidence is low and will be restored only by, or possibly by, a code of conduct, such as we are considering.

I would just add in this introduction that the public, I am afraid in this case, is being equated with the national press and certain specialists. I think we must keep that in mind. Certainly, the public in New Mexico is not making any such demands. They are demanding that they have a chance to know what is going on, that their confidence be restored, that it be restored by responsible solution to problems—problems of energy and the environment, inflation, excessive regulation by Government, the education of youth, and many others.

That is one way to restore the public's confidence in their elected representatives, to start to solve problems and not just treat their symptoms. Public confidence can also be restored in our conduct as elected representatives by responsible financial disclosure, disclosure that will allow the voter to judge our conflicts of interest of our conflicts of time.

The amendment which I have called up will strengthen the proposed code of conduct a great deal, I believe. It will require that a net worth statement be submitted on an annual basis that gives the value of assets and the amount of liabilities. It will require that basic Federal income tax information be provided on an annual basis, which would be restricted to but include gross income, adjusted gross income, the taxable income, total deductions claimed, the total tax for the taxable year, and any tax not paid, if any.

This annual disclosure of information, in addition to that proposed to be disclosed by the Nelson committee, in the resolution under consideration will give the individual voters, I believe, their best insight into their Senators' changing financial situation. It is on this changing financial situation that many voters in my State and elsewhere have had their greatest questions.

From this information, they also can judge any conflicts of interest and conflicts of time that may come out of any extra income that has been earned by the Senator in question.

Mr. President, I hope that at the very least, we shall provide the voter with the information that is required for them to exercise their rights in this Republic to vote with as much possible information as can be made available about the representatives who have been serving them.

Mr. DURKIN. Will the Senator yield for a question?

Mr. SCHMITT. I yield 1 minute for a question to the Senator from New Hampshire.

Mr. DURKIN. I have an amendment at the desk, No. 117, which requires disclosure in the tax returns and then, of course, a financial statement. I am wondering why the Senator did not require an assets and liabilities statement and the disclosure of the tax returns themselves? I am wondering what his reason is?

Mr. SCHMITT. My basic feeling is that the tax return is in detail. The total is a much more private matter than is required for disclosure. I personally disclosed my own tax return, but my situation is somewhat unique and certainly is not the norm.

I do believe that the kind of information that I have suggested we disclose by this amendment is sufficient for the voter to form the kinds of judgments that are necessary about their representatives' conduct, financial conduct, and any conflicts of interest or conflicts of time that might exist.

Mr. DURKIN. Will the Senator yield for a further short question?

Mr. SCHMITT. I yield to the Senator.

Mr. DURKIN. In compiling the investments and liability statement, does the Senator envision carrying real estate at market value or book value? I suggest the possibility of carrying that at book value rather than market value, in that the market here is much different from the market, I assume, in New Mexico, and far different from the market in New Hampshire and other States. The market here, I think, sometimes leads to confusion, the fair market value, I suggest that the Senator might want to carry real estate, at least the personal residence, at book value.

Mr. SCHMITT. On these questions as to what I would prefer, I leave it to the discretion of the Ethics Committee to promulgate such standards as seem to be required. I personally think that the standard means of putting together a net worth statement should be used, but that is something that I think the Ethic Committee could discuss and certainly would welcome these kinds of suggestions if this amendment were passed.

Mr. DURKIN. I gather the answer is no.

Mr. SCHMITT. I really have no particular opinion. I tend to think, if the Senator will permit me to do that, that the most recent available assessment is usually what is applied, as I understand the net worth statements, at least as I have been familiar with them. If, for some reason, it seems appropriate to conduct a new assessment, that will be fine. If it is more appropriate to indicate the value at which the property was acquired, that may be fine also. I think it is an issue that has enough complexities that the Ethics Committee should be allowed to determine by what rules they wish the game to be played.

Mr. President, I have no further comments I hope that the amendment will meet with a favorable reaction by the distinguished Senator from Wisconsin. He may wish to comment on this.

Mr. NELSON. Mr. President, we had a discussion on a similar proposal this afternoon by Senator WEICKER, which involved disclosure of income tax returns. As I said in that discussion, my tax return is available to the press and has been disclosed in past years. The committee decided not to go that route. The disclosure provided for in this resolution is in more detail and more comprehensive than the executive branch is requiring. It is in more detail and more comprehensive than the disclosure on the House side. We gave this thorough consideration and we think we have a very good disclosure proposal.

I am not saying it is perfect, and I am certain, of course, that Members have ideas by which they could improve it. But we think it is a very good disclosure provision, adequate to meet all the purposes of the public and the public interest.

I have one specific objection to this proposal. Imposing the obligation upon a Member to produce a net worth statement every 12 months means that he has to hire an appraiser to go out and look at his house. It is the same house he had last year. There it sits on the same lot. And he must pay the appraiser $100 or $150 or whatever to make an appraisal just to account for the increase in inflation, and do the same if he owns a piece of property or a piece of forestland or farm or any other asset. I think it does nothing to further the public interest to have an appraisal each year that discloses net worth, so long as all of the assets are disclosed and all real property is identified, purchase price identified, mortgage identified, or assessment disclosed. I think that is adequate.

In my view, I believe it is going too far to require a net worth statement. The committee did consider that and rejected it. So, with all due respect, I would have to oppose the amendment of the distinguished Senator from New Mexico.

Mr. SCHMITT. To the Senator from Wisconsin, in responding to that, I say I do not feel that the rules on the net worth statement that you might promulgate in the Ethics Committee necessarily might include a reassessment. That, I think, certainly could be gone at in an entirely different matter. An estimated value would be sufficient and would only be called into question if the Senator's net worth statement were called into question by some other procedure. Then, at that time, if a court proceeding required it or some other activity came up, a full up-to-date evaluation might be appropriate. I would not personally advocate annual evaluation of every piece of real estate property.

Mr. NELSON. It seems to this Senator that the Schmitt amendment would require it. If we say net worth, then someone has to make a judgment as to what the worth of a piece of property is. A piece of property, a home, around this city would at least have doubled in value in the past 7 or 8 years.

I have avoided trying to make an estimate of my home because, if somebody challenged it and it is my estimate, then I am misrepresenting to the public.

What I have disclosed each year is the statement of the price that I paid for the home 5 or 6 years ago, then disclosed the mortgage amount and who held the mortgage, knowing that everybody could make his own judgment.

But if, in fact, I said the house was worth a certain amount of money and then sold it for $10,000 more to move to another house 4 months later, everybody would say I made a misrepresentation on the statement, and I would not dare.

So I disclosed the facts needed for anybody to make a judgment.

But net worth does require, it seems to me, some kind of an appraisal and I do not see why anybody should be put to that expense so long as he discloses everything he has.

Everybody can make a judgment if he identifies he owns 500 acres of land in x location, bought 15 or 20 years ago at $50 an acre.

We know what the assessment is by going to the courthouse. Any real estate agent can tell us about what the value is. If people are that curious, let them ask. I do not think it should be the burden of any Member to pay every year for an appraisal on property.

Though I respect the opinion of the distinguished Senator from New Mexico, I think it goes too far.

Mr. SCHMITT. I, of course, respect the opinion of the distinguished Senator from Wisconsin.

Also, it presents another purpose what the individual Members are worth. I do not believe an estimate of the worth

of a particular piece of property is any great additional burden.

If the Senator is not willing to put his judgment of valued property up against that of his constituency, then I presume there is no other alternative.

Mr. DURKIN. Will the Senator yield?

Mr. SCHMITT. In one moment.

I believe it was the latitude given the Ethics Committee that a reasonable set of procedures for a net worth statement under this amendment could be put together, and it could be a reasonable set for all Members combined, and it would not cause an undue burden on their abilities to produce such a statement.

Mr. DURKIN. Will the Senator yield for a question?

Mr. SCHMITT. Yes, I will yield for a question.

Mr. DURKIN. I did make the suggestion, addressed the point, and I think it is a valid point of the Senator from Wisconsin, that the annual appraisal is an added burden. That is one of the reasons I suggested the acquisition cost. That is a matter of public record and can be detemined relatively easily. It is an unchanging figure.

That may alleviate the problem of the Senator from Wisconsin. It may help the Senator from New Mexico to get his amendment adopted as he desires.

Mr. SCHMITT. Well, the amendment as proposed, not that particular rule, preparing a net worth statement, I certainly think that would be a very strong and worthy proposal.

I have a feeling, though——

Mr. DURKIN. Does the Senator accept an amendment to his amendment then to say that residential real estate be carried at the acquisition cost?

In any such statement, that eliminates the problem of the Senator from Wisconsin.

Mr. SCHMITT. Well, let us find out if that alleviates the problem of the Senator from Wisconsin.

Mr. NELSON. I did not hear that, I was discussing another amendment.

Mr. DURKIN. I think the Senator from Wisconsin addressed a valid point, so I repeated my suggestion that if the personal residence is of the——

Mr. NELSON. No, that would not satisfy my objection because all other properties would be covered.

I do not agree because the committee addressed itself to it; to the disclosure of showing gross income, adjusted gross income, deductions claimed, taxes paid; we considered all that, and rejected it.

We think the disclosure is adequate. So this Senator is sticking with the committee position on that.

Mr. SCHMITT. Let me just add a final word in defense of the amendment.

One problem with the resolution, as the matter stands, in the disclosure area is that I think it is going to be difficult for the average New Mexican and average American, who wished to analyze the financial conditions and situations of their Representatives, to use the information easily. The existence of a net worth statement—and that is five or six pieces of information from the Federal tax report of the Senator—do provide a very quick and handy reference for judgment.

What I think a lot of us are trying to get to is to continue to allow the voter to exercise his judgment, that some of us here and particularly some special interest group on the outside are trying to exercise for them, and that is, I think, very crucial and a central point in the whole debate, are we going to start exercising the judgment of the voter before they have a chance to exercise it?

I hope we will not. But this is certainly a major step in that direction.

The amendment is really to get more information than the resolution does before they can exercise judgment.

I have no further statement, Mr. President, and I yield back the remainder of my time.

Mr. NELSON. I yield back the remainder of my time and I move to table the amendment.

Mr. SCHMITT. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

The PRESIDING OFFICER. The question is on agreeing to the motion to table the amendment of the Senator from New Mexico. The yeas and nays have been ordered, and the clerk will call the roll.

The assistant legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from South Dakota (Mr. ABOUREZK), the Senator from New Mexico (Mr. DECONCINI), the Senator from Hawaii (Mr. INOUYE), the Senator from South Dakota (Mr. MCGOVERN), the Senator from New Hampshire (Mr. MCINTYRE), the Senator from Montana (Mr. MELCHER), the Senator from Montana (Mr. METCALF), the Senator from North Carolina (Mr. MORGAN), the Senator from Michigan (Mr. RIEGLE), and the Senator from Florida (Mr. STONE) are necessarily absent.

I further announce that the Senator from Alaska (Mr. GRAVEL) and the Senator from Idaho (Mr. CHURCH) are absent on official business.

I further announce that, if present and voting, the Senator from New Mexico (Mr. DECONCINI), and the Senator from North Carolina (Mr. MORGAN) would vote "yea."

Mr. STEVENS. I announce that the Senator from Arizona (Mr. GOLDWATER), the Senator from Michigan (Mr. GRIFFIN), the Senator from Idaho (Mr. MCCLURE), and the Senator from Connecticut (Mr. WEICKER) are necessarily absent.

The result was announced—yeas 48, nays 36, as follows:

[Rollcall Vote No. 68 Leg.]

YEAS—48

Allen	Byrd, Robert C.	Hansen
Anderson	Cannon	Hatfield
Bellmon	Chafee	Hathaway
Bentsen	Chiles	Hollings
Brooke	Cranston	Huddleston
Bumpers	Eagleton	Humphrey
Burdick	Eastland	Javits
Byrd, Harry F., Jr.	Ford	Johnston
	Glenn	Kennedy
Long	Percy	Stennis
Magnuson	Randolph	Stevenson
Mathias	Ribicoff	Talmadge
Matsunaga	Roth	Thurmond
McClellan	Schweiker	Wallop
Nelson	Scott	Young
Nunn	Sparkman	
Pell	Stafford	

NAYS—36

Baker	Garn	Moynihan
Bartlett	Hart	Muskie
Bayh	Haskell	Packwood
Biden	Hatch	Pearson
Case	Hayakawa	Proxmire
Clark	Heinz	Sarbanes
Culver	Helms	Sasser
Curtis	Jackson	Schmitt
Danforth	Laxalt	Stevens
Dole	Leahy	Tower
Domenici	Lugar	Williams
Durkin	Metzenbaum	Zorinsky

NOT VOTING—16

Abourezk	Inouye	Morgan
Church	McClure	Riegle
DeConcini	McGovern	Stone
Goldwater	McIntyre	Weicker
Gravel	Melcher	
Griffin	Metcalf	

So the motion to table was agreed to.

UP AMENDMENT NO. 90

Mr. CANNON. Mr. President, I send an amendment to the desk and ask the clerk to report.

The PRESIDING OFFICER. The clerk will report the amendment.

The second assistant legislative clerk read as follows:

The Senator from Nevada (Mr. CANNON) proposes unprinted amendment No. 90.

Mr. CANNON. Mr. President, I ask unanimous consent that the reading of the amendment be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 36, line 14, after "used" insert "(a)".

On page 36, line 19, beginning with "or for" strike out all through line 21 and insert the following: "(b) to produce computer printouts except as authorized by user guides approved by the Committee on Rules and Administration, or (c) to produce mailing labels for mass mailings, or computer tapes and discs, for use other than in service facilities maintained and operated by the Senate or under contract to the Senate. The Committee on Rules and Administration shall prescribe such regulations not inconsistent with the purposes of this paragraph as it determines necessary to carry out such purposes."

Mr. CANNON. Mr. President, the purpose of my amendment would be to provide defined areas of operational guidelines for the Senate's computer facilities in their use for mass mailings which are statutorily governed by section 3110(a)(5)(D) of title 39, United States Code.

As background, the Ad Hoc Committee on Legislative Immunity, chaired by the distinguished senior Senator from Montana (Mr. METCALF) in its report of March 1, 1977, dealt with this subject at some length and urged the expeditious adoption of certain prohibitions.

The pending litigation, Common Cause against Bailar, et al., now before the U.S. District Court for the District of Columbia and challenging the constitutionality of the congressional franking law, has helped to focus attention on certain deficiencies in operations of the Senate's growing computer facilities.

In response to the Legislative Immunity Committee's request, the Committee on Rules and Administration on March 2 considered and approved certain regulations for use of the Senate's computer facilities for mass mailings. My amendment is substantially similar to that except it would provide that the Committee on Rules and Administration could prescribe such additional regulations subsequently dealing with the Senate's computer facilities which would not be inconsistent with paragraph 5 of the proposed rule XLVIII (48) entitled "Franking Privilege and Radio and Television Studios."

The purpose of my amendment would be to insure that the use of the Senate's computer facilities for mass mailings be limited clearly to dissemination of information that is part of the official business of a Senator and as set forth by the franking law.

This regulatory language proposed by this amendment would be in recognition of:

First. That the dissemination of information by Senators to their constituencies concerning legislation proposed or enacted by the Congress, as well as the administration of such legislation by the executive branch and the review of such matters by the courts, is part of the official business of a Senator under the Constitution of the United States. The distribution by mass mailings of such materials as newsletters, news releases, the texts of speeches delivered outside the Congress and similar items is an essential element in the dissemination of such information;

Second. That use of the computer is the most efficient method for producing mailing labels, and for storing, maintaining and processing the requisite address lists for such mailings. In order to provide for the dissemination of information by Senators to their constituencies at the lowest possible cost to taxpayers when the information concerns or is likely to be of interest to limited groups of citizens, it is highly desirable that there be a capability for directing the distribution of such information only to those citizens, and,

Third: That in no case are Members of the Senate or Senate Committees authorized to use Senate computer facilities for potential or personal purposes.

Mr. President, because the Senate's computer facilities are on the increase to meet new demands and because new developments in computer hardware and computer technology are constantly coming into use, it was our judgment that the rule XLVIII(48) of the Senate, should be permitted to address such changes in the years ahead. Therefore, as I propose, the Committee on Rules and Administration would be permitted authority to provide regulations subsequently dealing with the Senate's computer facilities that are not inconsistent with the proposed Senate rule XLVIII (48) entitled "Franking Privilege and Radio and Television Studios." Thus, new computer technology could be melded into Senate computer operations subsequently without formal amendment of Senate rules. Any subsequent Senate Rules Committee regulations for computer operations could not by the language of my amendment violate provisions of the Senate rule, and thus would accord complete protection to the intent sought by the rule.

Mr. President, I urge the adoption of this amendment.

I have cleared the amendment with the manager of the bill.

Mr. DURKIN. Mr. President, will the Senator yield for a question?

Mr. CANNON. Yes, I yield.

Mr. DURKIN. I have an amendment at the desk that would allow Members to utilize the boxholder as well as the particular address of the person to whom the newsletter or what have you was being sent.

I was wondering if there is any real need for that, and what the understanding of the chairman of the Rules Committee was. Would not a Senator today be allowed to use a boxholder? I ask that question so that I do not have to tie up the Senate in calling up my amendment and having a vote on it.

Mr. CANNON. I do not think under the law as it now stands or under this amendment if it were passed that a person would be authorized to use just simply the boxholder mailing. That goes beyond what we have in this amendment, and this relates to other matters. It specifies what can and cannot be done; that is, it just restates that in no case are Members of the Senate or Senate committees authorized to use Senate computer facilities for political or personal purposes. It requires the producing of labels, for the most efficient method for producing them, and storing and maintaining and processing the requisite address lists for such mailings.

If the Senator's amendment were to pass it would probably do away with some of the requirements of this one, which I would find no great problem with.

Mr. DURKIN. I thank the Senator.

Mr. CLARK. Mr. President, will the Senator yield for a brief question?

Mr. CANNON. Yes.

Mr. CLARK. In Senate Resolution 110, page 36, paragraph 5, I just want to make sure the Senator's amendment does not delete or in any way substantially affect that paragraph. May I read that paragraph? It says:

"5. The Senate computer facilities shall not be used to store, maintain, or otherwise process any lists or categories of lists of names and addresses identifying the individuals included in such lists as campaign workers or contributors, as members of a political party, or by any other partisan political designation, or for producing mailing labels or computer tapes for use other than in the service facilities maintained and operated by the Senate.

Is it accurate to say that the Senator from Nevada's amendment does not affect this section of the bill?

Mr. CANNON. Would the Senator give me that reference again as to where that is?

Mr. CLARK. On page 36, paragraph 5.

Mr. CANNON. Which line is that?

Mr. CLARK. The whole paragraph, lines 14 through 21.

Mr. CANNON. My amendment does not affect that. It says:

On page 36, line 14, after "used" insert "(a)".

On page 36, line 19, beginning with "or for" strike out all through line 21 and insert the following: "(b) to produce computer printouts except as authorized by user guides approved by the Committee on Rules and Administration, or (c) to produce mailing labels for mass mailings, or computer tapes and discs, for use other than in service facilities maintained and operated by the Senate or under contract to the Senate. The Committee on Rules and Administration shall prescribe such regulations not inconsistent with the purposes of this pargraph as it determines necessary to carry out such purposes."

Mr. CLARK. I thank the Senator.

Mr. ALLEN. Mr. President, will the Senator yield?

Mr. CANNON. Yes.

Mr. ALLEN. These are things that cannot be done, is that right?

Mr. CANNON. Yes. This is the proscription of things——

Mr. ALLEN. Yes.

Mr. CANNON (continuing). And providing what is proper to be done and some things that cannot be done.

Mr. ALLEN. These are things that cannot be done, and I have reference here to (b) "to produce computer printouts except as authorized by user guides approved by the Committee on Rules and Administration."

Mr. CANNON. That is correct.

Mr. ALLEN. In other words, no Senator, I assume, would like his printouts made available to the public for use in sending mass mailing by some concern selling merchandise; is that correct?

Mr. CANNON. The Senator is absolutely correct. Also the provision prohibiting the producing of mailing labels for computer tapes and discs for use other than in service facilities maintained and operated in the Senate.

Mr. ALLEN. Yes.

Mr. CANNON. Or by contract with the Senate.

Mr. ALLEN. I think it is a very fine amendment.

Mr. NELSON. Mr. President, the manager of the resolution is in agreement with the amendment. I have no objection to it.

Mr. CANNON. Vote.

Mr. NELSON. I yield back the remainder of my time.

Mr. CANNON. I yield back the remainder of my time, if I have any.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

TIME-LIMITATION AGREEMENT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on an amendment by Mr. SCHMITT there be a time limitation of 30 minutes to be equally divided in accordance with the usual form.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CANNON. Mr. President, will the Senator yield to me? I have one other amendment that will take about 2 minutes, and it is acceptable to the committee.

Mr. SCHMITT. Will we reduce our time? Did the Senator from Maine wish to call up a technical amendment? I already agreed with the Senator from Maine.

Mr. MUSKIE. That is all right.

Mr. CANNON. This is an amendment that is agreed to.

I ask unanimous consent that the time not be charged to either side on this matter.

The PRESIDING OFFICER. Without objection, it is so ordered.

UP AMENDMENT NO. 91

Mr. CANNON. Mr. President, I send an amendment, to the desk and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from Nevada (Mr. CANNON) proposes unprinted amendment No. 91.

The amendment is as follows:

On page 49, lines 15, 16, 23, and 24, strike out the words "The Committee, on Rules and Administration and" and capitalize the "T" in the words "the".

Mr. CANNON. On page 49, lines 15, 16, 23, and 24 strike out the words "The Committee on Rules and Administration and" and capitalize the "The" in the word "the".

Mr. President, the purpose of this amendment: The resolution provides that the matter relating to the adequacy of allowances for the operation of a Senator's office be referred jointly to the Committee on Rules and Administration and the Committee on Appropriations. That, traditionally, has been determined by the Appropriations Committee.

I see no worthwhile objective in having the Rules Committee included in on it because it is normally considered and hearings are held by the Appropriations Committee, and it is reported out with the legislative appropriations bill. Therefore, I think it would simplify the process if we removed the Rules Committee as one of the two committees that has this matter referred to it.

Mr. ALLEN. Mr. President, will the Senator yield?

Mr. CANNON. I yield.

Mr. ALLEN. I ask as a matter of information, and I am sure the amendment is all right: Does this only apply to section 301, or does it apply, also, to section 302, which calls on the Rules Committee to work with the Appropriations Committee and the Finance Committee to determine the tax aspects of political funds?

Mr. CANNON. Yes. This applies to section 301 and section 302.

Mr. ALLEN. I am wondering. The Senator does not think it would be a function for the Rules Committee, then, in studying the possible taxability of these funds?

Mr. CANNON. I do not wish to see the Rules Committee involved in it, when the funds are set up and determined as to adequacy by the Appropriations Committee, and the Internal Revenue Code is the one that is applicable to those particular funds.

Mr. ALLEN. I merely wished to call it to the Senator's attention. If he thinks both should be eliminated, that is all right with me.

Mr. CANNON. I think both should be eliminated.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. CANNON. I thank the Senator from New Mexico for yielding to us for that purpose.

The PRESIDING OFFICER. The Senator from New Mexico.

AMENDMENT NO. 84

Mr. SCHMITT. Mr. President, I call up for reading and consideration amendment No. 84.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from New Mexico (Mr. SCHMITT) proposes amendment No. 84.

The amendment is as follows:

On page 10, lines 11 and 12, strike out "of the spouse or dependents of that individual" and insert "of his or her spouse and dependents but, with respect to any interest, only if the reporting individual controls or has legal authority to control such interest".

The PRESIDING OFFICER. The Senator is recognized to support his amendment.

Mr. SCHMITT. Mr. President, this amendment is very short and very simple, and it relates to the question of disclosure of the interest of spouses and dependents. It merely says that such report will be made only if the reporting individual, namely, a Senator or employee of the Senate, controls or has legal authority to control the interest reported.

I think it is extremely important in this day and age that we recognize, even among ourselves, that the individual interest of Americans is in many cases separable and should be separable from the interest of their spouses or the people upon whom they depend for the majority of their sustenance.

If we do not do so, then we are going into the face of a general trend that has been estabilshed, and I call to the attention of colleagues the equal rights amendment and other activities that are aimed at this very problem of what are the individual rights of Americans, whether male or female or any ethnic minority, racial minority, or religious minority. I think it is inappropriate for the Senate to take a different course than is being taken by the rest of the Nation.

So I ask positive consideration of this particular amendment which relates the reporting of interest by a Senator over which he has legal authority to control.

I also call attention to amendment No. 131, which the distinguished Senator from New Jersey (Mr. JAVITS) has proposed, which goes to a similar problem relative to gifts.

I yield such time as the Senator requires to comment on his amendment at this time.

Mr. JAVITS. Mr. President, I thank our colleague very much.

The amendment which I have proposed I think is so obvious that I have great hope that the committee will accept it. I shall propose it as soon as the Senator has concluded. It is found at page 21, line 24, and deals with the matter of prohibited gifts and says if Members will follow it:

No Member, officer, or employee of the Senate, or the spouse or dependent thereof, shall knowingly accept or knowingly permit his spouse or dependent to accept, directly or indirectly, any gift . . .

I do not know how anyone can ever enforce that except by chaining his wife to a bedstead. It just makes no sense at all. It is very thoroughly protected anyhow in the sense that we are fully covered under the very preamble to this rule itself which says "gifts," saying that we should have nothing of value, et cetera, favor, service, or anything else, which could impose upon our obligations as Senators. I thoroughly agree with that.

So I hope, Mr. President, for the very reasons stated, to wit, our own self-respect, the fact that it is completely unenforcible, is only embarrassing us, and the fact that it is covered otherwise in the code, that that will be eliminated.

While I am on my feet, I wish to support Senator SCHMITT's amendment in this sense. I am not convinced that this is the ideal language. But it is a grave problem which is being posed to all of us who have independent wives, and that goes for a lot of Senators, and I have one. That problem is found reflected in the fact that we are called upon to report everything about our wives—there is some limitation—but essentially source of income, the property, whatever trading they might do in securities, et cetera, with this understanding, and I call attention to page 12, lines 7 to 10. This is not concerned in the amendment, but it bears upon what we expect Senators to do. And I worked with the committee on this, and we did work it out much better than it was, but it still presents a very thorny problem. Page 12, lines 7 to 10 says:

An individual only is required to report information within his knowledge; however, it is the reponsibility of a reporting individual to exercse reasonable diligence to obtain the information necessary to comply with this rule.

What is reasonable diligence? Is it poking around in your wife's bedroom to find out if she has a savings account or what? What is reasonable diligence? Now I say to Senators we are each charged with reporting under a code of ethics and can be charged for serious dereliction if we do not perform. So bear in mind we are not dealing with any light proposition. We are undertaking a real responsibility for many women who are independent and feel deeply aggrieved and insulted if we go poking around in their affairs.

Now, is there protection? There is. There is ample protection here under the conflict of interest section and under the gifts section for anything any Senator may do indirectly, secretly, covertly, or anything you want to call it, through his wife or anyone else, which would demean or insult his office, and he could be hauled

up and censured by the committee on anything he has not explained to the Senate.

Mr. President, this is completely inconsistent with modern times and the relationships between married couples. There are many here to whom it means nothing, but it does mean something to Senators who have wives who deeply resent this intrusion into their private affairs. They are not Senators; they are only wives of Senators. They are entitled to a personal life, and whatever is the eventuation of that life, they have the right to choose. The fact that they are married to us does not mean they should be subject to a requirement which cannot be performed.

You have to be a lawyer or a judge to determine what is meant by "reasonable diligence," to find out——

Mr. NELSON. Mr. President, will the Senator yield?

Mr. JAVITS. Let me finish one sentence. I think the House definition—by the way, I wish Senator SCHMITT had chosen that—the House definition, to me, is much better, even though it has been narrowly restricted by their own construction.

The House definition says:

> Respecting the spouse of the person reporting, which information relates to items under the constructive control of such person.

I thoroughly agree with that. Directly or indirectly, if you have a participation or any control aspect, or are a party to it, you certainly should report it; but I cannot see the way in which we have left it, which imposes such a serious obligation on individual Senators that I really think it has an element in it of not only nonenforceability, but real embarrassment.

Mr. NELSON. Mr. President, will the Senator yield?

Mr. JAVITS. Yes.

Mr. SCHMITT. Is the Senator from Wisconsin yielding on his own time?

Mr. NELSON. Yes, on my own time, if I may ask a couple of questions; I ask unanimous consent that the time for the question and response be charged against the Senator from Wisconsin.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. NELSON. I would agree with the Senator from New York that the inclusion of the words "with due diligence" or "reasonable diligence" or whatever it was——

Mr. JAVITS. "Reasonable diligence."

Mr. NELSON. I would agree that that ought to be stricken; the reporting individual should be required to report what he knows.

Second, let me ask this question of both the Senator from New Mexico and the Senator from New York:

It is true that the House used the concept or the phrase "constructive control," and we discussed that briefly in the committee. As the Senator from New York knows the House use of the words "constructive control" is not the ordinary lawyer's interpretation of what constructive control yould mean. Rather, based upon House common law, so to speak, they have developed an interpretation of what that means, and it is clear that the test in the House is not control, not whether the asset is under the control of the reporting spouse, but whether the reporting spouse does in fact accrue benefits from the property or other holdings of the spouse.

Ordinarily, any lawyer would come to the conclusion that when you take constructive control, the reporting Member would have to have control; but in the House, under their interpretation, I am advised, they mean if the benefit of the reporting Member's spouse holdings or income accrue to the benefit of the reporting Member, then the reporting Member has constructive control.

My question is whether that would satisfy the Senator from New York and the Senator from New Mexico, whether they would accept a substitute amendment which included the House interpretation of what constructive control meant. I would find that acceptable myself.

Mr. JAVITS. I would, if it was understood—in fact——

Mr. RIBICOFF. Mr. President, will the Senator yield?

Mr. JAVITS. May I just answer the question? I would accept it, and I think it is a good solution, provided we understand that statement of the husband to mean knowingly, that he knowingly accepts the benefits or the fruits. Then I thoroughly agree. But if it is unknowing—let us assume that the wife buys a painting and it is hung in the home and certainly he is enjoying it, it is there, but if he has no knowledge, no real bona fide knowledge of where the painting came from, or why it is there, or anything like that, that would be something of a question to me.

But I would be perfectly willing to take my chances, and advise other colleagues to do the same, on the House language and the House construction of that language, because I believe it does mean knowingly.

Mr. RIBICOFF. Mr. President, will the Senator yield?

Mr. NELSON. Mr. President, I wonder if the Senator who has the floor would permit me to yield on my time to the Senator from Connecticut.

Mr. SCHMITT. Yes.

Mr. RIBICOFF. Mr. President, let me say that I cannot imagine the more unfortunate adoption of any amendment than that of the one proposed by the Senator from New Mexico. Frankly, to adopt this amendment would really gut this bill. I would feel constrained to vote against the entire rule if the Schmitt amendment were adopted.

While there may be exceptions, there is no question that most of us have a relationship with our wives that is close and meaningful. Legally, we know that what a wife or husband has does affect the other spouse. Under the laws of almost every State, even if you are not a community property State, when one dies the wife is entitled to a certain percentage of the husband's, or the husband of the wife's, estate. So we do have a vested interest. If we have children, our children are beneficiaries of what the wife has and what we have.

To adopt the Schmitt amendment would mean that we will not have just a situation of rich men in the United States Senate; the Senate will be composed of men with rich wives, and the rich wives will put their husbands in the Senate.

I do not know how you can have a relationship with your wife and not list your wife's basic holdings, because your wife lives with you; she has a meaningful relationship with you; you have children in common; your expenditures are made in common; so consequently to adopt the Schmitt amendment would mean you are excluding the wife's holdings, you are excluding your wife's interest, and we would be placing ourselves in a position where we will have a loophole so large we can drive a truck through it. If all the work that we have done on the ethics code means anything, we are completely undermining it by the Schmitt amendment, and I hope the Schmitt amendment will be rejected.

Mr. JAVITS. Mr. President, will the Senator yield me another 2 minutes?

Mr. NELSON. I do not know how much time we have.

The PRESIDING OFFICER (Mr. SASSER). Who yields time?

Mr. JAVITS. Or 1 minute?

Mr. NELSON. I yield 1 minute to the Senator from New York.

Mr. JAVITS. Mr. President, I think the important point is, what is a Senator's accountability? That is what I am arguing, not what he is going to inherit.

We cannot pry into relations between individual Senators and their wives. Perhaps Senator RIBICOFF speaks with feeling and warmth about his relationship with his wife. But there happen to be almost a hundred wives involved here; I do not know how many bachelors there are. But every situation is different. We all understand that every situation is different, and every Senator is accountable, and we say he has got to go and find out with reasonable diligence.

This is not a Hughes case and it is not a negotiable note. This is a relationship with your wife. All I am saying is, what is the Senator accountable for?

As to despoiling this code, the fact is that under any one of those provisions——

The PRESIDING OFFICER. The Senator's time has expired.

Mr. JAVITS. One minute?

Mr. SCHMITT. I yield the Senator 1 minute.

Mr. JAVITS. Under any one of those provisions, for gifts or conflicts of interest, the Ethics Committee can haul you up or me up or anyone on the slightest suspicion he is doing something he should not do with his wife. They have full power on that. That does not depend upon this particular provision. This is only a reporting provision, and that is where my disagreement arises, as far as I am concerned.

I suggest the House provision. I think that is a good suggestion.

Mr. RIBICOFF. This is a disclosure rule.

The PRESIDING OFFICER. Who yields time?

Mr. LONG. Will the Senator yield 1 minute?

Mr. NELSON. I yield 1 minute to the Senator from Louisiana.

Mr. LONG. It seems to me that the point we are talking about is that we do not have any power. We may think we do, and some Senators may, in fact, have power. But the fact is that a woman is no longer a man's chattel. We do not have the right to tell her anything about her private business. She has the perfect right to tell a man it is none of his blamed business. If a wife comes into a marriage and has property of her own, we do not have any power here to write a code of ethics for our wives. They do not have the power to put it on themselves. That is the individual freedom of an individual woman. Just how we are supposed to be criminally liable or liable under a code of ethics for the conduct of our wives is something I find somewhat difficult to account for.

Mr. BAYH. Will the Senator yield a couple of minutes?

The PRESIDING OFFICER. Who yields time?

Mr. SCHMITT. Let me make a quick comment to associate myself with the comments of the Senator from New York and the Senator from Louisiana. I think they are absolutely correct. I speak with some objectivity here, since I am not married and have not been married. I may be some time in the future. Nevertheless, I do not think that we as Senators, nor officers or the employees of the Senate, should take it upon ourselves to commit to disclosure items over which we have no control. The Senator from Louisiana has stated that extremely well.

Mr. President, how much time does the Senator from New Mexico have remaining?

The PRESIDING OFFICER. The Senator has 6 minutes remaining.

Mr. SCHMITT. I yield 2 minutes to the Senator from Indiana.

Mr. BAYH. I must say I find myself in a great quandary. I think the Senator from Connecticut is right when he talks about loopholes. But I will say as one Member of this body, along with others, I have been very much concerned about women who are beginning to develop as human beings in their own right instead of being, as the Senator from Louisiana says, treated as a chattel of their husbands. I think we have to look at what this does to women as human beings.

It is all well and good to suggest that I have a close relationship with my wife. We are just getting ready to celebrate our 25th anniversary. I am proud of every one of those years. But when she says to me, "Is there anything I can do as a human being, as Marvella Bayh, who was an independent, human being before she met Birch Bayh?" I have to say I think she has a point.

What if she says to me, "Honey, I don't want what I inherited from my father"—which is not all that much—"put into the CONGRESSIONAL RECORD or listed someplace." What if she happens to speak to an organization and accepts a fee of $100? That is a matter of her own business.

Let me ask the Senator from Wisconsin, suppose she says, "BIRCH, I don't want you to put in the RECORD what is mine and what I have earned." I must respect my fidelity to her rather than what the Senate code might say. What position does that put me in as a Senator? Frankly, I think I owe it to her to fulfill her wish. But what is my position? Does that make me a violator, subject to being drawn up before the Ethics Committee?

It is a real quandary in my mind. I appreciate the Senator yielding to me. Can somebody answer that question?

Mr. CANNON. The Senator can resign.

Mr. BAYH. Yes, I can resign and I can get a divorce, too. Does the Senator suggest that? [Laughter.]

Mr. NELSON. If the Senator from Indiana is being put into the position of doing something contrary to what Marvella said, he would be in trouble.

Mr. BAYH. That I know. Frankly, if she feels strongly about this, as a woman, not necessarily as my wife but as a woman, I owe it to her. What I want to know on the other side of this is having made that decision and bare my chest here, how much trouble am I getting into with the Ethics Committee? I really want to know that.

Mr. NELSON. I think it is unrealistic to presume that one spouse does not have an interest in the other spouse's assets. There may be rare cases when they do not. But usually they do have an interest because, as the Senator from Connecticut has said, they have survivor's rights, inheritance rights. So we are providing a disclosure law and whether the Member be a man or a woman, suppose a spouse is worth $2 or $3 million and is trading in the stock market regularly, has investments and various assets. The other spouse is a Member, casting votes, and also a beneficiary of the investments and the money, the assets and the returns, of the activities of the spouse who is not a Member. It would be naive to suggest that the spouse who was a Member did not have any interest in the activities of the spouse who was not a Member.

Mr. BAYH. The Senator has not answered the question.

Mr. NELSON. The disclosure of what the spouse was doing if the spouse were wealthy may be much more important than what the Member was doing if the Member did not have any money.

Mr. BAYH. The Senator is right and I admitted that loophole. I agree with what the Senator from Connecticut said. Will somebody answer my question?

The PRESIDING OFFICER. Who yields time?

Mr. BAYH. How much trouble will this cause me? Will somebody answer the question?

Mr. NELSON. Mr. President, how much time remains to the Senator from Wisconsin?

The PRESIDING OFFICER. The Senator from Wisconsin has 3 minutes remaining.

Mr. NELSON. I yield 2 minutes to the Senator from Iowa.

Mr. CLARK. One minute will be sufficient.

Mr. President, I agree entirely with the Senator from Connecticut. If this body really believes that disclosure is the most important aspect of a code of ethics, as several people here have said, then certainly we must understand that to pass this amendment destroys the disclosure provision, because the transfer of unlimited amounts of funds could be made from one spouse to another to evade disclosure. This resolution deals with spouses by the way, not wives. Obviously, if this amendment passes, one could transfer unlimited amounts of money, and one could take in unlimited amounts of money, without any disclosure.

Mr. BAYH. Will the Senator yield?

Mr. CLARK. Clearly, the case would be that we would have no real disclosure provision.

Mr. BAYH. Will the Senator yield for a question from someone who has been involved in this? What the Senator says is true.

The PRESIDING OFFICER. One minute has expired. Who yields time?

Mr. BAYH. A Member has to make the decision of whether he will let his wife be an individual or not.

The PRESIDING OFFICER. Let us have order in the Senate. Who yields time?

Mr. CURTIS. Will the Senator yield?

Mr. SCHMITT. I will yield in just a moment.

Mr. President, in order to reach a compromise. I ask that the following modification to my amendment be made. essentially taking the words of the House House: On line 3 of my amendment, after the comma after the word "but" insert 'only that information which relates to items under the constructive control of such individual." This would put us in line with the House and with the legislative record established earlier.

The PRESIDING OFFICER. Is there objection to the modification of the amendment?

Mr. RIBICOFF. I object.

The PRESIDING OFFICER. Objection is heard.

Mr. JAVITS. Does the objection lie——

Mr. SCHMITT. Mr. President, I request——

Mr. JAVITS. Does an objection lie to this, Mr. President? He has not asked for the yeas and nays yet.

The PRESIDING OFFICER. Yes. The Senate has taken action on this amendment in the form of a unanimous-consent agreement. Who yields time?

Mr. SCHMITT. Mr. President?

Mr. BAYH. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. BAYH. Is it possible for the Senator to introduce an identical amendment such as the one he has modified and ask the Senate to vote on it immediately following this? Is that within his right?

The PRESIDING OFFICER. He could do this by unanimous consent or offer it as an amendment at the end of the time remaining.

Mr. BAYH. So if unanimous consent is ruled accurate, which apparently it is, then it can take the Senate another vote to let our distinguished colleague have his right to change the amendment. Is that accurate?

The PRESIDING OFFICER. It would take an additional vote. That is accurate.

Who yields time?

Mr. SCHMITT. How much time does the Senator from New Mexico have?

The PRESIDING OFFICER. The Senator from New Mexico has 2 minutes remaining.

Mr. BAKER. Will the Senator yield half a minute to me?

Mr. SCHMITT. Yes, I yield.

Mr. BAKER. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. BAKER. If the Senator from New Mexico were to withdraw his amendment, which is now pending by a unanimous-consent agreement, is it in order now to ask unanimous consent that he be immediately recognized to introduce a substitute?

The PRESIDING OFFICER. The Senator could ask it.

Mr. BAKER. Mr. President, I ask unanimous consent that he be recognized for that purpose.

The PRESIDING OFFICER. Is there objections?

Mr. NELSON. I would object pending an inquiry.

Is it the suggestion of the minority leader that this be a withdrawal and a brandnew amendment, with different language?

Mr. BAKER. Mr. President, it was in furtherance of the query by the Senator from Indiana that I inquired whether, if the Senator from New Mexico were to withdraw this amendment, he could, without unanimous consent, introduce an identical amendment with language to amend this one were it not for the objection?

Mr. NELSON. Have the yeas and nays been ordered?

Mr. BAKER. They have not. Unanimous consent was granted to take up the amendment.

Mr. DURKIN. Mr. President, may we ask the Senator from Wisconsin to use his microphone?

Mr. BAKER. What the minority leader is asking for is an order saying that, if the Senator from New Mexico withdraws his amendment and introduces another amendment in identical form except for the changed language, he will next be recognized so we can proceed with him.

Mr. NELSON. I guess he has the right to withdraw.

The PRESIDING OFFICER. Is there objection?

Mr. CLARK. Reserving the right to object, is it the understanding of the Chair that there will be a 2-hour limit on that amendment?

The PRESIDING OFFICER. That is correct.

Mr. BAKER. Mr. President, I inquire of the Senator from New Mexico if that would be his wish?

Mr. SCHMITT. We have generated enough interest here. It would possibly take 2 hours, but I think another half-hour would be sufficient.

Mr. RIBICOFF. I object.

The PRESIDING OFFICER. Objection is heard.

Mr. SCHMITT. Mr. President, I presume I have 1½ minutes left. I yield 30 seconds to the Senator from Nebraska.

Mr. CURTIS. I thank the Senator.

Mr. President, I would like to ask the distinguished Senator in charge of the legislation if the committee believes—and if so, I would like to have the authority cited—that this provision that we are questioning now is enforceable?

Mr. NELSON. There have been several State statutes requiring spouses' disclosure which have been upheld.

The PRESIDING OFFICER. The time of the Senator has expired. Who yields time?

Mr. CURTIS. But those pertain to someone who is not a Senator and not an employee of the Senate.

AMENDMENT NO. 84, AS MODIFIED

The PRESIDING OFFICER. Who yields time?

Mr. SCHMITT. Mr. President, in order to get this matter to a conclusion, I yield back the remainder of my time and offer an amendment in the nature of a substitute to amendment No. 84, which I send to the desk at this time.

The PRESIDING OFFICER. Does the Senator from Wisconsin yield back his time? He has 1 minute.

Mr. NELSON. I yield back the remainder of my time.

The PRESIDING OFFICER. The amendment will be stated.

The assistant legislative clerk read as follows:

The Senator from New Mexico (Mr. SCHMITT) proposes an amendment in the nature of a substitute number 84 as modified:

On page 10, lines 11 and 12, strike out "of the spouse or dependents of that individual" and insert "of his or her spouse and dependents but, only with respect to that information which relates to items under the constructive control of such individual.

Mr. JAVITS. Mr. President, will the Senator yield for a question?

Mr. SCHMITT. I yield to the Senator from New York.

The PRESIDING OFFICER. There is an order of 1 hour, equally divided. Who yields time?

Mr. SCHMITT. I yield myself 5 minutes and will yield 2 minutes for a question.

Mr. JAVITS. Does the Senator accept, as the construction of this amendment, the construction placed upon it in the other body as read by the manager of the bill?

Mr. SCHMITT. I accept that.

Mr. JAVITS. I yield back my time.

The PRESIDING OFFICER. Who yields time?

Mr. RIBICOFF. If that is accepted, if the Senator will yield, I think it is only fair to state that that is not what is in the House amendment. If it is to be accepted in accordance with the House, the entire language of the House should be accepted and that is not the language of the House.

Mr. SCHMITT. I did not presume to say that it is exactly the language. It reflects the language used by the House.

Does the Senator have the House bill in front of him? I read from it: "Each report shall also contain information listed in paragraphs 2 through 5 of this part B respecting the spouse of the person reporting"—and this is the essential language—"which information relates to items under the constructive control of such person."

I wish to have the Senator from New York comment once again. I think this esentially removes the difficulty that he and I have seen in the language in the pending resolution.

Mr. JAVITS. If the Senator will yield, it seems that way to me, and also, if, as I hope it will be, it is acceptable to strike that part of page 12, lines 8 to 10, which deals with seeking to get the information. It would then read, if Senator NELSON accepts it and it is acceptable to my other colleagues, "An individual only is required to report information within his knowledge."

If that would be acceptable, then I think we have settled the best way we can this particular controversy.

Mr. BIDEN. Will the Senator yield for a question?

Mr. JAVITS. Does the Senator want me to yield?

Mr. BIDEN. No, I ask the Senator from New Mexico if he will yield for a question.

Mr. SCHMITT. I yield for a question.

Mr. BIDEN. What happens in the instance where a Senator does not have constructive control of his wife?

Mr. SCHMITT. I think that we have that problem in forcing the ethics code on anyone outside this body. The junior Senator from Connecticut mentioned that earlier today. I think it is something that the Ethics Committee is going to have to wrestle with at some time in the future, whether we do, in fact, have any control over former members, former spouses, separated spouses, and so on. I do not have an answer to that. I am not a lawyer and I am not sure that any lawyer in this body at the present time has an answer to that question. What we are trying to do with this amendment, this substitute form of an amendment, is to insure that the ambiguity of the resolution that has been proposed is removed, with the understanding, of course, that the Ethics Committee has sufficient authority to prevent the situations arising that the senior Senator from Connecticut has envisioned. I hope that he will accept the Ethics Committee's charter in this area.

Mr. RIBICOFF. I think, if I have a few minutes, what has to be understood here is that the House, in using its language, has been following its experience, its interpretation found in its own disclosure form. That is the House interpretation of the term constructive control as contained in its own disclosure.

An interest is in the control of reporting individual "if the enhancement of the interest would substantially benefit the reporting individual. Normally, in the absence of a specific property division agreement, the interests of a spouse or dependent are constructively controlled by the reporting individual."

What this Senator feels is that under those circumstances, where there is an interest by the husband in his wife's property, for conflict of interest purposes, the wife's interest in property is the same as the husband's, because when the husband acts on any vote or if there is a potential conflict of interest, what benefits the wife benefits him and benefits their children. I do not see how we can have an ethics code if we are going to exclude the wife when there is an interest in common.

If this is going to be done, I say to the majority leader, with the work that he has done and those in this room who feel that something should be done, we might as well go home and forget this entire measure. We cannot have an ethics code excluding the wife when the husband would have a constructive benefit or the children, in common, have a constructive benefit from the wife's property. That is the basic issue that we face here.

Mr. SCHMITT. If they are held in common, they are going to report it under the provisions of this act.

Mr. RIBICOFF. It is not the question of held in common. In a community property State, it is considered held in common, but there are not many community property State. A wife can have her individual property in her own name; so can the husband. But I think we understand that there is a basic common interest that one spouse has in the property of another spouse. I cannot talk about New Mexico. I do not know what the law of New Mexico is, but I know that in the law of Connecticut, there are certain rights one has in the other's property. In other words, you cannot leave a will in the State of Connecticut and exclude your wife from being a beneficiary in your will and the wife cannot exclude the husband in her will, either.

You also cannot exclude children. Children have rights.

What we are doing here is saying that the husband reports his property, but the wife need not report hers. In many instances, the wife could have more property than the husband and the wife does not disclose. The wife can be a millionaire and the husband can be a pauper. So the husband lists, "I have no property except my salary."

But meanwhile, the wife is the one with the substantial interest, whether it is stocks, whether it is bonds, whether it is a farm, whether it is real estate or any other investment.

So I do not see how we can have an ethics code and a disclosure code excluding the property of the wife.

Mr. SCHMITT. But in the areas of whether it is constructive control and where the Senator has an interest in the wife's assets, they will be disclosed. We are only excluding the other things.

Mr. RIBICOFF. But the other States are not. There could not be constructive control for the wife's property, because when she dies, whether she excludes them or not, he will get a one-third interest in her estate.

Mr. SCHMITT. But there are options open, I believe, probably in every State. Some can be closed, but not all. That is something we cannot treat, I do not think, in this particular matter.

Mr. WALLOP. Will the Sentaor yield for a comment?

Mr. SCHMITT. I will yield 2 minutes to the Senator from Wyoming, then the Senator from Utah wanted 1 minute, and then I will yield back my time.

Mr. WALLOP. The comment I have is the same as the Senator from Utah was about to make, I believe.

I think the Senator from Indiana brought up the point that this whole provision was unfair to women. I believe what the Senator from Connecticut has gone through, and the provisions he was just talking about, take it for granted there will never be anything but men sitting in this body.

This is the most sexist provision of the whole code.

What happens if a woman is elected to this body and the man says, "I am not going to leave my job with General Motors, I refuse to disclose anything."

Mr. RIBICOFF. Would not have to. We made provision for this particular rule, that the income of a spouse would be excluded with respect to earned income. If we have a wife or a husband who is working for General Motors, if she earns more than $1,000, she does not have to report her income or leave her job, but merely say she works for General Motors.

Mr. WALLOP. The Senator is taking it for granted the Senator is going to be a man. I am saying there is a possibility, although it seems improbable, that there might one day be another woman Senator.

Mr. RIBICOFF. And if it is a woman Senator, she will have to list her husband's property.

Mr. WALLOP. And I suggest that if he says "no" that there is not any court in the land that would make either side disclose that.

The PRESIDING OFFICER. The 2 minutes have expired.

Mr. RIBICOFF. That is another thing.

Mr. NELSON. I yield 2 minutes to myself.

Mr. President, how much time is left on the amendment?

The PRESIDING OFFICER. Twenty-three minutes for the Senator from New Mexico and 28 minutes for the Senator from Wisconsin.

Mr. NELSON. Twenty-eight?

The PRESIDING OFFICER. Twenty-eight.

The Senator from Wisconsin has yielded himself 2 minutes.

Mr. NELSON. I wonder if the Senator from Connecticut will yield for a question. I was discussing another amendment coming up tomorrow.

Did the Senator carry on a dialog with the Senator from New Mexico respecting incorporating the House language "constructive control" into the amendment?

Mr. RIBICOFF. Let me put it this way, if there is an inclination to handle this matter based on the House approach, I think it could be done provided in the amendment we used the interpretation the House has developed, and not merely the House language contained in the House rule; because, the House rule is based on experience and the common law of the House as interpreted in their disclosure law.

I think there is an amendment that the staff has drafted that incorporates the House interpretation of the House rule. I think if the chairman was interested in going ahead with language comparable to that used by the House in accordance with the provision drawn by the staff, we are talking about something else.

There is a sense of fairness and a sense of comity. But not the language that was proposed by the Senator from New Mexico without the House interpretation that they have had over a period of years.

Mr. NELSON. I yield myself 2 more minutes.

May I ask the Senator from Connecticut who is on the committee, and as a consequence of his work on the Watergate disclosure, in my judgment, the best informed Member on this question, would the Senator find acceptable a substitute amendment with the language in accordance with the dialog just concluded by the Senator?

Mr. RIBICOFF. Yes, I personally would, because I think here we have a provision which deals with a situation where the wife is completely separate.

Mr. SCHMITT. Mr. President, may we have order?

Mr. RIBICOFF. We separate the wife's separate property. But if there is a benefit to the husband by the enhancement of the wife's property then it would be covered by the House rule as interpreted by the House.

Mr. NELSON. I thank the Senator.

I wonder if I could inquire of the Senator from New Mexico——

Mr. SCHMITT. Mr. President, may we have order, it is almost impossible to hear.

The PRESIDING OFFICER. Let us have order in the Senate. The Senator from New Mexico cannot hear on his side of the Chamber and I can hardly hear up here.

Mr. NELSON. Let me say first that for the last 2 or 3 hours I have been saying to everyone who inquired that the majority leader was suggesting that we would conclude at 8 o'clock. I know a number of people are relying upon that estimate.

Between the Senator from New Mexico and myself we still have about 45 minutes. I do not want to impose on those Members who relied upon the 8 o'clock time.

My inquiry is this, we may be near a position of compromise if the language "due diligence" was removed as suggested by the Senator from New York and we incorporate as a substitute, or as a part of the amendment for the Senator from New Mexico. The ideas we have been discussing. Would the Senator from New Mexico be prepared to accept that?

Mr. SCHMITT. Based on the discussion we have had now, I would be willing

to accept that with, of course, the proviso that we are talking about the legislative history that is established by the House.

Mr. RIBICOFF. The language of the amendment explains the purpose. I will read very slowly so the Senator from New York and the Senator from New Mexico will see whether it is satisfactory, and this carries out the House common law and also the House language.

On page 10, after line 21, insert the following new paragraph:

For the purpose of paragraph (a)(3) and subparagraphs (d) to (j) of paragraph 2, a reporting individual shall also report the interest of the spouse or dependents of that individual if such interests are within the constructive control of the reporting individual. For the purposes of this subparagraph, an interest is in the constructive control of the reporting individual if the enhancement of the interest will substantially benefit the reporting individual. Normally, in the absence of specific property division agreements, the interests of a spouse or dependent are constructively controlled by the reporting individual.

So there they interpret "constructive" to make sure it covers the sitation where the Senator does, by the enhancement of that property, get a benefit.

That way, if the wife makes money in stock transactions or real estate and you occupy the same house and she is contributing to running your home and your automobile and sending the kids to school or college, then certainly you are getting a benefit.

We know that there are many rich women who marry poor men, who have the money, who send the kids to college, who buy the homes, who buy the clothes. I do not know how it can be said that the Senator is not involved because all the largess of the family is coming from the wife.

Mr. BIDEN. Mr. President, will the Senator yield?

Mr. RIBICOFF. I yield.

Mr. BIDEN. Do I correctly understand that this amendment does not include earned income of a wife?

Mr. RIBICOFF. It does not.

Mr. BIDEN. I am perplexed about that. How about the situation in which the wife is a partner in a law firm or the wife has any business interest? Or, how about a situation in which the spouse—he or she—is a partner in a law firm? Obviously, there is that practical conflict. If we are going to report, why do we not report that?

Mr. RIBICOFF. We have arranged that. Let us say there is a Senator whose wife is a doctor, a lawyer, or in the real estate business; she has an independent career and an independent profession. As part of a law firm, she is entitled, and the law firm is entitled, to a sense of privacy as to who their clients are, because there is a confidential relationship.

We know from the disclosure statement that the person is a partner in Jones and Smith and that her income from the law firm is more than $1,000. The husband lists the wife as a partner in the firm of Jones and Smith, earning in excess of $1,000. We know that she has a substantial interest in this law firm. If this law firm is representing clients with Federal business, Federal legislation, or lobbying, then it is open notice to the entire world, to the Senate, and to the Ethics Committee that there may be a situation that involves a conflict of interest.

There is a difference in a wife earning money independently, in this modern era, as suggested by the Senator from Indiana and the Senator from New York, separate and apart from the interest of a husband who gets a benefit from a wife's earnings and the wife's interest or the wife's property which devolves upon him.

This should apply to a woman who has a separate profession or an independent business. We are not going to exclude them and prevent them from working and pursuing their profession.

Mr. BIDEN. I thank the Senator for the answer. I think it is still awfully cloudy. The answer is accurate and to the point, but I question the legitimacy of the definition.

Mr. RIBICOFF. You have to draw lines all over, and you never can find the perfect answer or the perfect solution.

While there are this many Senators in the Chamber, I point out that I do not believe we need any part of this rule. I wish the Senate would not have any part of this rule. But if we are embarked upon a rule, let us do the best job we can.

Of the 100 Senators, there is not one who does not have a problem. The Senator from Wisconsin and I have been approached by practically every Senator, and each has a legitimate complaint. That is why I have said to both the majority leader and the minority leader that I hope that once this rule is adopted and established, we would then proceed statutorily to try to straighten this out, to have the same rules apply to the judicial branch, the legislative branch, and the executive branch of this Government. Right now, we have a hodgepodge situation in which the House has one rule, the Senate has another rule, the judiciary has another rule, and another rule pertains in the executive branch of Government.

I believe that anyone working for the Federal Government, irrespective of which branch, should be governed by the same rules and regulations, and I hope we can straighten out this matter. But right now we are involved in adopting a rule that will be the basis of a code of ethics for this body, and we are trying to do the best job we can.

Mr. BAYH. Mr. President, does the Senator from New Mexico have some time, or will someone yield me 3 or 4 minutes?

The PRESIDING OFFICER. Who yields time?

Mr. SCHMITT. I had previously committed myself to yield to the Senator from New York.

Mr. JAVITS. If Senator BAYH wishes to be heard, I will stand by.

Mr. BAYH. No, that is all right.

Mr. JAVITS. Mr. President, we have gone a long way toward trying to work out this matter. The provisions which is specified by Senator SCHMITT's amendment is now the House provisions. The Senate can take our word for that. It is the House provision—it is the syntax—to adjust to the terms of our measure.

What is desired is that the construction of the House provision read by the Senator from Wisconsin is sought to be incorporated into the statute, because this is what it is for us. Like any other opinion, it is not of a nature which should be statutory; but Senator SCHMITT has accepted the construction of the House.

I say to the Senator from Connecticut (Mr. RIBICOFF) that we fought this one out in the committee, and I am not sensitive about it. We are trying to find a way to resolve what many Members—and I think we now realize how many Members—consider a real dilemma. The language which is not of a statutory nature is the last sentence:

Normally, in the absence of specific property division agreements, the interests of a spouse or dependent are constructively controlled by the reporting individual.

That is only an example which judges give and others of us give when making an opinion, but we do not say that that is the rule, either way—yes or no. So as to that part of this interpretation which reads like a rule and is a rule, and which many man can understand, I have no objection to incorporating it, if that is what the Senator from Wisconsin desires. But I do not think this sentence belongs, because it says that normally it allows of exceptions. Therefore, what is your guideline?

In my judgment, this has to be precise enough to be a guide to Members who are going to do the reporting.

So, in conclusion, my feeling is that if you eliminate that sentence—"normally" is hardly a statutory word—then I would see no reason why what Senator SCHMITT has said he will take should not be allowed to be incorporated in the rule.

Mr. RIBICOFF. Even if this were deleted from the rule, would the Senator from New York and the Senator from New Mexico be willing to accept this interpretation? That is the interpretation the House places upon it.

Mr. JAVITS. We accepted the whole interpretation of the House. The only question is, if we write it in the rule and the House tomorrow says something else is "normally" or we say something else is "normally," we have changed this rule. This way, by omitting it, we accept the situation as it stands.

Mr. RIBICOFF. It is not a question of following the House. It is the understanding in the colloquy, in the interpretation of this rule. We take this interpretation as it pertains to the rule we are accepting, even if we delete this language.

Mr. JAVITS. That is understood now. All I am saying is that it is not the kind of sentence you can live with on a continuous basis. What is normal today might not be normal tomorrow.

Mr. RIBICOFF. I would be willing to delete that sentence on the proviso that the Senator from New Mexico and the Senator from New York would be willing, for the purpose of interpretation, to agree that this is how we interpret it at the present time.

Mr. JAVITS. That is OK.

Mr. RIBICOFF. If that were the case. I would hope, and I anticipate, that the House, through its committee, would place their rule in statutory language.

We will be faced in the Senate sometime in September with either taking the House bill or a bill that we have, and I would hope again—and I have urged our committee—and I would urge the leadership to place us in position to adopt rules and regulations in statutory form which pertain to all branches of government.

Mr. JAVITS. I say to the Senator he and I do not disagree, and I hope we will be able to work, on the whole, in that as cooperatively as we have in this.

May I also make clear that it is understood, if Senator RIBICOFF will please bear with me, if Senator RIBICOFF is agreeable, not that he is running the Senate, but I think we are debating it and people are listening to him and listening to me, that we deal with this question of reasonable diligence on page 12, and that we deal with this gift question on page 21 as we have discussed in this debate. That would dispose of all of those amendments.

Mr. RIBICOFF. I think what bothers me, I say to the Senator from New York, is that we put this clause in at this request.

The PRESIDING OFFICER. The Senate will please be in order.

Mr. ROBERT C. BYRD. Mr. President, may we have order? There is an effort here being made to work this out, to resolve this amendment, and I think we are close to it. I hope the Chair will insist on order in the Senate.

Mr. RIBICOFF. I think we are getting away from the proposal of the Senator from New Mexico, and now we are going to another section.

Mr. JAVITS. I thought it was understood when we were discussing this with Senator NELSON that all these matters hang together as disposing of the spouse issue, and Senator NELSON said—I am sorry he is not here—but he agreed that this question of exercising reasonable diligence should be omitted, and that knowingly permitting your spouse to accept a gift made no sense. So if we are going to dispose of it, let us dispose of the whole thing.

Mr. RIBICOFF. Senator NELSON is not here, and so far as a gift is concerned, that is of no concern. But "information within his knowledge," that I would be guided by whatever Senator NELSON thinks.

Mr. NELSON. That is twice that two Members have said "Senator NELSON is not here."

Mr. RIBICOFF. I was looking at the cockpit and the Senator was not in the cockpit. [Laughter.]

Mr. NELSON. I had expressed my personal opinion on the phrase referred to by the Senator from New York——

Mr. RIBICOFF. I am sorry, I did not hear it.

Mr. NELSON. The "due diligence" phrase, I think, is a value judgment thing. I do not know how you judge that. Somebody might say, "I was duly diligent," and it cannot be disputed. I agree with the Senator from New York on that.

Mr. RIBICOFF. It does not bother me me at all to delete that section on page 12, subsection (e). I think the important provisions are those suggested by the Senator from New Mexico that seek to work his will on page 10, after line 21. That is what is of concern.

Mr. JAVITS. Mr. President, we are agreed on all of those things.

I ask unanimous consent that these three amendments may be considered en bloc.

The PRESIDING OFFICER. Is there objection?

Mr. RIBICOFF. Do we know what these amendments are?

Mr. JAVITS. These are the amendments we just discussed.

Mr. NELSON. I was making a telephone call so I am not sure.

Mr. JAVITS. We just discussed three amendments: One amendment of Senator SCHMITT with the last sentence omitted; the other amendments relate to the gift business, page 21, line 4, and the last amendment strikes out this clause after the semicolon on page 12, lines 8 through 10.

Mr. RIBICOFF. May I suggest since it is 8:25 p.m. and we are dealing with very complex problems, that instead of trying to put it together in this way without anybody seeing it, that we adjourn in accordance with the wishes of the majority leader and have this the pending order of business when we come back. Then we can let the staffs work out the language on the basis of the colloquy; Senator NELSON's staff, Senator CLARK's staff, Senator SCHMITT's staff, Senator JAVITS' staff, and my staff. Let us put this all in language and tie it together and we will have an opportunity in the morning to take a look at it.

Mr. JAVITS. Well now, Mr. President——

The PRESIDING OFFICER. Will the Senate please be in order and will the Senators please take their seats.

Mr. JAVITS. That is all right if we are agreed. Nobody is trying to rush anything through on language. But if we are agreed, let me restate what I understand to be our agreement: That the Schmitt amendment will be amended to include the constructive control provisions, that is their interpretation which Senator RIBICOFF has read, except for the last sentence, the last sentence reading "Normally, in the absence of specific property divisions agreements, the interests of a spouse or dependent are constructively controlled by the reporting individual." That is stricken.

Second, we are agreed that page 12, lines 8 to 10, after the semicolon, dealing with reasonable diligence, reading as follows:

however, it is the responsibility of a reporting individual to exercise reasonable diligence to obtain the information necessary to comply with this rule.

That is to be stricken.

At page 21, line 24——

Mr. RIBICOFF. Hold it just a second.

Mr. JAVITS. Does the Senator want me to wait?

Mr. RIBICOFF. I have it.

Mr. JAVITS. Page 21, line 24, the words "or knowlingly permit his spouse or dependent to accept, directly or indirectly," be stricken.

If we understand each other on that score as to the drafting, and so on, I have no quarrel.

Mr. SCHMITT. I have no quarrel with that agreement. Also I do hope we realize that, as the Senator from New York has mentioned, in striking a sentence, the last sentence of the proposal of the Senator from Connecticut, we are doing so in order to not unduly restrict the interpretation of the rule. Is that the understanding of the Senator from New York.

Mr. JAVITS. My understanding is we are accepting that statement, that is "normally, in the absence of specific property division agreements, the interests of the spouse or the dependent are constructively controlled by the reporting individual," which is the understanding now as we adopt this rule.

Mr. RIBICOFF. The first two provisions would be acceptable. I do not know about Senator CLARK.

On page 21, line 24, to strike "or knowingly permit his spouse or dependent to accept," I can see striking that out, but I do not see striking out "directly or indirectly."

Mr. SCHMITT. I think that was an inadvertent inclusion by the Senator from New York.

Mr. JAVITS. That is what the amendment says. I read the "directly or indirectly," although it is not in my amendment, so I do not strike it.

Mr. President, if we are that agreed why can we not just do it and that ends what has already taken 2 hours of debate?

Mr. RIBICOFF. May I say to the Senator from New York——

Mr. SCHMITT. Mr. President, I agree with the Senator from New York. We have reached agreement here on the floor, and we should be able to proceed to other matters tomorrow.

SEVERAL SENATORS. Vote! Vote!

UP AMENDMENT NO. 92

Mr. JAVITS. Mr. President, I send the two additional amendments to the desk and ask that they be reported.

The PRESIDING OFFICER. Is there objection to considering the amendments en bloc? Without objection, it is so ordered.

The amendment will be stated.

The second assistant legislative clerk read as follows:

The Senator from New Mexico (Mr. SCHMITT) for himself and Mr. JAVITS proposes an unprinted amendment number 92.

The amendment is as follows:

On page 10, delete lines 8 through 12.

On page 10, line 13, delete "(2)" and insert in lieu thereof "(c)(1)".

On page 10, after line 21, insert the following new paragraph:

"(2) For the purposes of subparagraph (a)(3) and subparagraphs (d) through (j) of paragraph (2) a reporting individual shall also report the interests of the spouse or dependents of that individual if such interests are within the constructive control of the reporting individual. For the purposes of this subparagraph, an interest is in the constructive control of a reporting individ-

ual if the enhancement of the interest would substantially benefit the reporting individual.

On page 21, line 24, strike the words "or knowingly permit his spouse or dependent to accept,".

On page 12, line 8, strike all after the semicolon to the end of (e) and insert a period.

Mr. JAVITS. Mr. President, Senator SCHMITT has sent up his amendment as a modification to his amendment.

The PRESIDING OFFICER. Without objection, the two amendments from the Senator from New Mexico are withdrawn.

Mr. SCHMITT. Mr. President, with this amendment as an amendment in the nature of a substitute, this is the amendment change as proposed by the Senator from Connecticut with the last sentence stricken.

The PRESIDING OFFICER. Without objection, the three amendments will be considered en bloc.

Who yields time?

Mr. SCHMITT. Does the Senator from Wisconsin have anything further?

Mr. METZENBAUM addressed the Chair.

The PRESIDING OFFICER. Who yields time?

Mr. STEVENS. Let us vote on them all right now.

The PRESIDING OFFICER. Who yields time?

Mr. SCHMITT. Does the Senator from Wisconsin have anything further?

Mr. METZENBAUM. Will the Senator from Wisconsin yield 30 seconds?

Mr. NELSON. Yes. Do I have 30 seconds? I will yield it.

Mr. METZENBAUM. Mr. President, I do not know if all other Members of the Senate understand what these three amendments contain but I know I do not, and I sat here and tried to listen intently.

I, therefore, think that the suggestion the Senator from Connecticut made a few minutes ago, that we recess until tomorrow and have an opportunity to digest that which has been proposed rather than being asked to accept three amendments en bloc, be followed, and I suggest to the Senator from Connecticut that we proceed in that manner.

Mr. RIBICOFF. I think that is fair. We understand one another, and I think that in all fairness to the clerk and the Members of this body we should incorporate what we are talking about in one amendment and print it tonight. Everyone will have a chance to look at it, and the Senator from Wisconsin can accept it tomorrow if it carries out our intention, if it is satisfactory to Senators here.

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. SCHMITT. I yield.

Mr. JAVITS. Mr. President, I said before and repeat, we are not yet in agreement. We have been debating it. That suggestion is perfectly satisfactory to me.

The PRESIDING OFFICER. Who yields time?

Mr. SCHMITT. Mr. President, I concur in that suggestion if my amendment becomes the pending business tomorrow when we again treat resolution 110.

I ask unanimous consent that it be the pending business tomorrow.

The PRESIDING OFFICER. Is there objection?

Mr. ROBERT C. BYRD. Mr. President, what is the request?

The PRESIDING OFFICER. The request is for unanimous consent to make this the pending business tomorrow.

Mr. ROBERT C. BYRD. It is the pending business now. If we go out tonight it will be automatically the pending business tomorrow.

The PRESIDING OFFICER. The Senator is correct.

TIME-LIMITATION AGREEMENT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on tomorrow there be a time limitation on the pending amendment, which has really been almost worked out, of 1 hour, to be equally divided between Mr. SCHMITT and Mr. NELSON.

The PRESIDING OFFICER. Is there objection?

Mr. DOLE. Mr. President, reserving the right to object——

Mr. RIBICOFF. Mr. President, reserving the right to object, I ask unanimous consent that we be able to submit this amendment for printing tonight.

Mr. ROBERT C. BYRD. In the RECORD.

Mr. RIBICOFF. So it will be in the RECORD for the entire Senate to see, instead of bringing up an unprinted amendment tomorrow, and our respective staffs will draw this up and submit it to the clerk so it can be printed.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Connecticut?

Mr. STEVENS. Mr. President, reserving the right to object, I did discuss with the majority leader the request of making my amendment No. 134 the pending business when we adjourn this evening.

I wonder if we may include the provision that my amendment 134 will become the pending business when this is disposed of?

Mr. SCHMITT. Mr. President, may we have order?

The PRESIDING OFFICER. Will the Chamber please be in order? Members please take their seats.

The pending request is the request from the Senator from Connecticut.

Is there objection to that?

Mr. JAVITS. Mr. President, may we hear that restated?

The PRESIDING OFFICER. That the amendment, the three amendments, be printed in the RECORD.

Mr. JAVITS. Fine.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MAGNUSON. Mr. President, I could not hear the majority leader. Is there to be a time limitation on this amendment?

Mr. ROBERT C. BYRD. On this amendment, 1 hour.

Mr. MAGNUSON. When do we start?

Mr. ROBERT C. BYRD. Tomorrow.

Mr. MAGNUSON. What time do we start tomorrow?

Mr. ROBERT C. BYRD. 12 o'clock.

Mr. MAGNUSON. 12 o'clock.

Mr. ROBERT C. BYRD. Yes.

Mr. MAGNUSON. So there will be a vote on it at 1 p.m.?

Mr. JAVITS. If there is a vote.

Mr. ROBERT C. BYRD. If there is a vote. They have about worked it out.

Mr. MAGNUSON. There may be some kind of vote. I am like the Senator from Ohio. I still do not understand what these three amendments do. There seems to be agreement among three, four, or five Senators here. I think there should be enough time. I do not know that I shall have any objection to it, but there should be enough time for us to look at it. I suggest that Senators leave the time limitation go and make it the pending business and then probably get the hours agreement tomorrow after we have a little time to look at this.

Mr. ROBERT C. BYRD. May I say to the distinguished Senator there is 1 hour time limitation on this amendment but under the resolution both the majority leader and minority leader may yield time from the time on the resolution to any Senator on any amendment. If any Senator wants more time than 1 hour, we can arrange it.

Mr. MAGNUSON. And meet at 12 o'clock?

Mr. ROBERT C. BYRD. Meet at 12 o'clock.

ORDER FOR RECESS UNTIL TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business today it stand in recess until the hour of 12 noon tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

OFFICIAL CONDUCT AMENDMENTS OF 1977

The Senate continued with the consideration of the resolution (S. Res. 110) to establish a Code of Official Conduct for the Members, officers, and employees of the U.S. Senate; and for other purposes.

ORDER FOR RECOGNITION OF SENATOR STEVENS TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that upon the disposition of the pending amendment tomorrow, Mr. STEVENS be recognized to call up his amendment No. 134.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, there will be no more votes tonight.

I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. SARBANES). Without objection, it is so ordered.

AMENDMENT NO. 153

Mr. ROBERT C. BYRD. Mr. President, I have the amendment which really amounts to amendments en bloc which have been agreed upon by Mr. JAVITS, Mr. SCHMITT, Mr. RIBICOFF, and Mr. NELSON.

I send them to the desk. I ask unani-

mous consent that they be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

The amendment is as follows:

On page 10, delete lines 8 through 12.

On page 10, line 13, delete "(2)" and insert in lieu thereof "(c)(1)".

On page 10, after line 21, insert the following new paragraph:

"(2) For the purposes of subparagraph (a)(3) and subparagraphs (d) through (j) of paragraph (2) a reporting individual shall also report the interests of the spouse or dependents of that individual if such interests are within the constructive control of the reporting individual. For the purposes of this subparagraph, an interest is in the constructive control of a reporting individual if the enhancement of the interest would substantially benefit the reporting individual.

On page 12, line 8, delete "Knowledge; however, it is the responsibility" and delete lines 9 and 10 and insert in lieu thereof "knowledge.".

On page 21, line 24, delete "or knowingly permit his spouse or dependent to accept".

Mr. ROBERT C. BYRD. They will automatically be printed and be available at the desk, will they not?

The PRESIDING OFFICER. The Senator is correct.

Without objection, they will be substituted for the pending amendment.

Mr. ROBERT C. BYRD. Mr. President, are there any special orders for the recognition of Senators tomorrow?

The PRESIDING OFFICER. There are none.

ORDER FOR SENATE TO RESUME CONSIDERATION OF SENATE RESOLUTION 110 TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on tomorrow, immediately after the two leaders or their designees have been recognized under the standing order, the Senate resumes the consideration of the pending code of ethics.

The PRESIDING OFFICER. Without objection, it is so ordered.

TIME-LIMITATION AGREEMENT

Mr. ROBERT C. BYRD. Mr. President, the pending question at that time will be on the amendment by Mr. SCHMITT, is that correct, as modified?

The PRESIDING OFFICER. The majority leader is correct.

Mr. ROBERT C. BYRD. Following that amendment, there will be an amendment by Mr. STEVENS under the order previously entered. I ask unanimous consent that there be a 1-hour time limitation on the amendment by Mr. STEVENS, to be equally divided and controlled in accordance with the usual form.

The PRESIDING OFFICER. Without limitation, it is so ordered.

TIME-LIMITATION AGREEMENT

Mr. ROBERT C. BYRD. Mr. President, I understand Mr. MUSKIE has an amendment which is acceptable to the managers of the resolution. I ask unanimous consent that there be a 10-minute time limitation thereon and that it be called up upon the disposition of the Stevens amendment.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR STEVENSON TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that Mr. STEVENSON then be recognized to call up his amendment.

The PRESIDING OFFICER. Without objections, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR TOWER TOMORROW AND TIME-LIMITATION AGREEMENT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that Mr. TOWER then be recognized to call up two amendments, on each of which there be a 1-hour time limitation, the time to be divided and controlled in accordance with the usual form.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR HUDDLESTON TOMORROW AND TIME-LIMITATION AGREEMENT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that Mr. HUDDLESTON then be recognized to call up an amendment on which there be a time limitation of not to exceed 30 minutes, to be equally divided and controlled in accordance with the usual form.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR ROTH AND TIME-LIMITATION AGREEMENT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that Mr. ROTH then be recognized to call up an amendment and that there be a time limitation thereon of 1 hour, to be equally divided in accordance with the usual form.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR DURKIN TOMORROW AND TIME-LIMITATION AGREEMENT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that Mr. DURKIN be recognized to call up an amendment at that time; that there be a time limitation thereon of 30 minutes, to be equally divided in accordance with the usual form.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, Mr. DURKIN, I believe, has two additional amendments. I ask unanimous consent that at such time as they are called up, there be a time limitation on each amendment of 30 minutes, to be equally divided and controlled in accordance with the usual form.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that it be in order, if Mr. DURKIN wishes to call up one of his two remaining amendments at that time, that he be allowed to do so. I think this pretty equally balances out between both sides of the aisle.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR WALLOP TOMORROW AND TIME-LIMITATION AGREEMENT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that Mr. WALLOP then be recognized to call up three amendments, on one of which there be a 30-minute time limitation and on a second of which there be a 1-hour limitation; that the time be equally divided and controlled in the usual form; and that it be the understanding that the time on his third amendment come out of the 1 hour.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. It is my understanding that the third amendment is going to be acceptable and he is willing to take that out of the time on the 1-hour amendment.

ORDER FOR RECOGNITION OF SENATOR HATHAWAY TOMORROW AND TIME-LIMITATION AGREEMENT

Mr. ROBERT C. BYRD. Mr. President, following the recognition of Senator WALLOP, I ask unanimous consent that Mr. HATHAWAY be recognized to call up an amendment; that there be a time limitation on Mr. HATHAWAY'S amendment of 30 minutes, to be divided and controlled in accordance with the usual form.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD subsequently said: Mr. President, I wish to modify the time agreement with respect to Mr. HATHAWAY. I understand that he wants 30 minutes on his side. So, instead of a 30-minute time limitation on the Hathaway amendment, I ask unanimous consent that that be a 1-hour time limitation.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR PERCY TOMORROW AND TIME-LIMITATION AGREEMENT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that Mr. PERCY then be recognized to call up three amendments, on each of which there be a time limitation of 10 minutes, to be equally divided and controlled in accordance with the usual form, and that he then be permitted to call up amendment No. 133, on which there be a time limitation of 1 hour, to be equally divided and controlled in accordance with the usual form.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, there are two additional amendments Mr. Percy has, on each of which I believe it is agreed there will be a 30-minute time limitation, to be equally divided and controlled in the usual form. I hesitate to attempt to crank those additional two amendments into the pecking order at this point, because I feel that there may be some Senators on my side of the aisle who might want to be recognized. So if it is agreeable with the distinguished minority leader, we could just agree on the time with reference to the two last amendments by Mr. PERCY, the 30-minute amendment.

Mr. BAKER. If the Senator will yield, there are six amendments that the Senator from Illinois is requesting consideration of. I think in fairness, as we have now disposed of four, and we have arrived at time limitations on the other two, that we try to sequence the other two remaining amendments later in the day.

I ask the majority leader, if it is determined that it will work a great hardship on the Senator from Illinois, if we could consider scheduling the other two during the day on tomorrow.

Mr. ROBERT C. BYRD. We certainly will attempt to do that, I say to the distinguished minority leader.

So it is agreed, then, that on the fifth and sixth amendments by Mr. Percy, there will be a 30-minute time limitation on each, the time to be equally divided and controlled in accordance with the usual form, but we will not attempt to crank them into the list at the moment.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR HELMS TOMORROW AND TIME-LIMITATION AGREEMENT

Mr. ROBERT C. BYRD. Mr. President, hopefully, if all things go well, Mr. HELMS has six amendments. I ask unanimous consent that, following recognition of a Senator or so on my side of the aisle, Mr. HELMS then be recognized to call up his amendments. He has four, on each of which I ask unanimous consent that there be a time limitation of 20 minutes. He has two on each of which I ask unanimous consent that there be a time limitation of 40 minutes, in each case, the time to be equally divided and controlled in accordance with the usual form.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER OF PROCEDURE TOMORROW

Mr. ROBERT C. BYRD. I am sure that the distinguished minority leader will agree with me that we have reached the point here where we cannot—I do not think we dare attempt to crank Senators into sequence without knowing what other Senators may wish to call up amendments. We recognized Mr. PERCY there on four amendments and we recognized Mr. HELMS at some later point for six amendments; Mr. PERCY for two additional amendments. I think we probably had better let things rest as they are.

Mr. BAKER. Mr. President, if the majority leader will yield; I agree with him. I think that we have scheduled enough to keep us busy at least until this hour tomorrow.

May I inquire of the majority leader what his hopes or plans might be for the closing time of the Senate tomorrow?

Mr. ROBERT C. BYRD. Well, if we go through all—I hope that Senators will not consume the time that is allocated to each of those amendments, but they certainly may. In many instances, they may not. I cannot see our getting through that list of amendments by 9 o'clock tomorrow night. I cannot see it.

Mr. BAKER. Mr. President, I judge that if we do not finish this schedule by the end of the session tomorrow, it would be the majority leader's plan to go over to Friday with the same sequence.

Mr. ROBERT C. BYRD. Yes; unless there are reasons which are put forth by Senators and acceptable by others that their respective amendments be sandwiched in.

But according to the list here, it would require unanimous consent to change it. But any Senators whose amendments have not been reached on the listing that has been set forth in the RECORD would follow on Friday in that same sequence.

Mr. BAKER. I thank the majority leader.

I might say for the information of the majority leadership, that even though the list we have just agreed to is long, it does not encompass all the requests we have. At some time tomorrow, I would hope to be able to negotiate with the majority leader on amendments for Senator CURTIS, for Senator HANSEN, for Senator JAVITS, for Senator MCCLURE, for Senator DOLE, and for Senator HATFIELD, to be considered subsequent to the consideration of these measures.

Mr. ROBERT C. BYRD. Yes.

Mr. BAKER. And possibly others.

Mr. ROBERT C. BYRD. Yes.

Mr. BAKER. Mr. President, if the Senator will yield for one more moment, I did not quite hear the time limitation on the Stevenson amendment; was there a time limitation?

Mr. ROBERT C. BYRD. I did not request a time limitation on that. I had been asked, not by Mr. STEVENSON, he is willing to agree to an 80-minute time limitation, but there were other Senators who felt perhaps we might want to take the full 2 hours on that amendment.

Mr. BAKER. So it will be under the control of the general unanimous-consent agreement?

Mr. ROBERT C. BYRD. Yes.

Mr. BAKER. Mr. President, I ask the Senator to yield further to request the Chair to advise us of the amount of time left on the resolution for the record.

The PRESIDING OFFICER. The Chair informs the distinguished minority leader in response to his question, there is a total of 1,764 minutes time remaining, of which 958 is under the control of the distinguished minority leader, the Senator from Tennessee, and 880 under the control of the distinguished majority leader, the Senator from West Virginia.

Mr. BAKER. I thank the Chair and I thank the majority leader for yielding.

TIME-LIMITATION AGREEMENT—H.R. 4876

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that at such time as H.R. 4876, an act making economic stimulus appropriations for the fiscal year ending September 30, 1977, is called up and made the pending business before the Senate, there be a time limitation thereon of 3 hours, to be equally divided between Mr. MCCLELLAN and Mr. YOUNG; that there be a time limitation on any amendment thereto of 30 minutes, with the exception of one amendment by Mr. SCHWEIKER on which there be a time limitation of 1 hour; that there be a time limitation on any debatable motion or appeal of 20 minutes; that there be a time limitation on any point of order, if such is submitted to the Senate for discussion, of 20 minutes; and that the agreement be in the usual form with respect to the control and division of time.

The PRESIDING OFFICER. Without objection, it is so ordered.

The text of the agreement is as follows:

Ordered, That during the consideration of H.R. 4876 (Order No. 49), an act making economic stimulus appropriations for the fiscal year ending Sept. 30, 1977, and for other purposes, debate on any amendment except an amendment to be offered by the Senator from Pennsylvania (Mr. Schweiker) on which there shall be 1 hour, shall be limited to 30 minutes, to be equally divided and controlled by the mover of such and the manager of the resolution, and that debate on any debatable motion, appeal, or point of order which is submitted or on which the Chair entertains debate shall be limited to 20 minutes, to be equally divided and controlled by the mover of such and the manager of the resolution: *Provided*, That in the event the manager of the bill is in favor of any such amendment, motion, appeal, or point of order, the time in opposition thereto shall be controlled by the Minority Leader or his designee.

Ordered further, That on the question of agreeing to the said resolution, debate shall be limited to 3 hours, to be equally divided and controlled, respectively, by the Senator from Arkansas (Mr. McClellan) and the Senator from North Dakota (Mr. Young): *Provided*, That the said Senators, or either of them, may, from the time under their control on the passage of the said bill, allot additional time to any Senator during the consideration of any amendment, debatable motion, appeal, or point of order.

ORDER FOR CONSIDERATION ON FRIDAY OF H.R. 4876, ECONOMIC STIMULUS APPROPRIATIONS ACT, 1977

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that immediately following the prayer on Friday, the Senate proceed to the consideration of H.R. 4876.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER OF BUSINESS ON FRIDAY

Mr. ROBERT C. BYRD. Mr. President, if there should be requests for speeches on Friday, I believe that those Senators should be encouraged not to seek the orders for Friday morning, because it would infringe upon the meeting of committees. If we convene before 11 a.m. in order to accommodate Senators, it would, by that amount of time, infringe on the meeting of any committees.

So I hope we will not have any requests on my side of the aisle for any special orders of time on Friday. I hope

the distinguished minority leader will try to assist on his side.

Mr. BAKER. Mr. President, I would express a similar request, possibly for a different reason. I suspect that we are going to have an attendance problem by Friday afternoon, and I hope we can get on to the business at hand as soon as possible and do as much as possible with a maximum number of Senators present.

I join the majority leader in expressing the hope that Senators might postpone their special order requests to another day.

Mr. ROBERT C. BYRD. Mr. President, I hope we will not have an attendance problem. I cannot say that we will not. I hope we will not have an attendance problem. I hope that, once we have disposed of the economic stimulus appropriations bill, we can continue our action on amendments to the code of ethics measure.

ORDER FOR RECESS FROM TOMORROW UNTIL 11 A.M. ON FRIDAY NEXT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business on tomorrow, it stand in recess until 11 a.m. on Friday next.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, on Friday, upon the disposition of the act making economic stimulus appropriations, the code of conduct measure would automatically be back before the Senate, would it not,

The PRESIDING OFFICER. The Senator is correct.

APPOINTMENT BY THE VICE PRESIDENT

The PRESIDING OFFICER. The Chair, on behalf of the Vice President, pursuant to Public Law 86–380, appoints the Senator from Delaware (Mr. ROTH) to the Advisory Commission on Intergovernmental Relations.

ORDER FOR H.R. 3437 TO BE HELD AT THE DESK

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that H.R. 3437 be held at the desk pending further disposition.

The PRESIDING OFFICER. Without objection, it is so ordered.

WAIVER OF THE CONGRESSIONAL BUDGET ACT WITH RESPECT TO CONSIDERATION OF S. 1025

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the immediate consideration of Senate Resolution 121, waiver of section 402(a) of the Congressional Budget Act with respect to consideration of S. 1025, to amend the Securities and Exchange Act of 1934 to increase the amount authorized to be appropriated for the Securities and Exchange Commission for fiscal year 1977.

The PRESIDING OFFICER. The bill will be stated by title.

The legislative clerk read as follows:

A resolution (S. Res. 121) waiving section 402(a) of the Congressional Budget Act of 1974 with respect to the consideration of S. 1025.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

There being no objection, the resolution was considered and agreed to, as follows:

Resolved, That pursuant to section 402(c) of the Congressional Budget Act of 1974, the provisions of section 402(a) of such Act are waived with respect to the consideration of S. 1025. Such waiver is necessary because the need for the additional funds arose after May 15, 1976. The supplemental request, transmitted to Congress on January 18, 1977, covers the pay increase which went into effect in October 1976, and additional funds needed to complete the modernization of the automated data processing and record system of the Securities and Exchange Commission.

S. 1025—SECURITIES AND EXCHANGE COMMISSION AUTHORIZATIONS

Mr. ROBERT C. BYRD. Mr. President, I understand that Calendar No. 48, S. 1025, has now been cleared for action by unanimous consent, now that the waiver has been disposed of.

The PRESIDING OFFICER. The Senator is correct.

Mr. ROBERT C. BYRD. Is this correct?

Mr. BAKER. Mr. President, it is correct. We are cleared, pending only the adoption of the budget waiver, which was just done. We have no objection to proceeding with its disposition.

Mr. ROBERT C. BYRD. Mr. President, I would just ask the clerk to transfer Calendar No. 48 to the Unanimous Consent Calendar, so that it will be there on tomorrow.

The PRESIDING OFFICER. That will be done.

PROGRAM

Mr. ROBERT C. BYRD. Mr. President, the Senate will convene at 12 o'clock noon tomorrow.

After the two leaders or their designees have been recognized under the standing order, the Senate will resume the consideration of the pending measure, Senate Resolution 110. The pending question at that time will be on the adoption of the amendment, as modified, by Mr. SCHMITT, on which there is a time agreement of 1 hour. There will be rollcall votes throughout the afternoon tomorrow and late into the day.

RECESS

Mr. ROBERT C. BYRD. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in recess until 12 meridian tomorrow.

The motion was agreed to; and at 9:21 p.m. the Senate recessed until tomorrow, March 24, 1977, at 12 meridian.

NOMINATIONS

Executive nominations received by the Senate March 23, 1977:

FEDERAL TRADE COMMISSION

Michael Pertschuk, of the District of Columbia, to be a Federal Trade Commissioner for the unexpired term of 7 years from September 26, 1970, vice Stephen A. Nye, resigned.

DEPARTMENT OF THE TREASURY

Robert Carswell, of New York, to be Deputy Secretary of the Treasury, vice George H. Dixon, resigned.

CONFIRMATIONS

Executive nominations confirmed by the Senate March 23, 1977:

DEPARTMENT STATE

Lucy Wilson Benson, of Massachusetts, to be Under Secretary of State for Coordinating Security Assistance programs.

Hodding Carter III, of Mississippi, to be an Assistant Secretary of State.

Richard Holbrooke, of the District of Columbia, to be an Assistant Secretary of State.

Terence A. Todman, of the Virgin Islands, a Foreign Service officer of the class of career minister, to be an Assistant Secretary of State.

Patsy T. Mink, of Hawaii, to be an Assistant Secretary of State for Oceans and International Environmental and Scientific Affairs.

U.S. INFORMATION AGENCY

John E. Reinhardt, of Maryland, a Foreign Service information officer of the class of Career Minister for Information, to be Director of the U.S. Information Agency.

AGENCY FOR INTERNATIONAL DEVELOPMENT

John J. Gilligan, of Ohio, to be Administrator of the Agency for International Development.

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Jay Janis, of Florida, to be Under Secretary of Housing and Urban Development.

Lawrence B. Simons, of New York, to be an Assistant Secretary of Housing and Urban Development.

Robert Campbell Embry, Jr., of Maryland, to be an Assistant Secretary of Housing and Urban Development.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Thomas D. Morris, of the District of Columbia, to be Inspector General, Department of Health, Education, and Welfare.

Arabella Martinez, of the District of Columbia, to be an Assistant Secretary of Health, Education, and Welfare.

The above nominations were approved subject to the nominees' commitments to respond to requests to appear and testify before any duly constituted committee of the Senate.

EXTENSIONS OF REMARKS

THE PANAMA CANAL ISSUE

HON. HARRY F. BYRD, JR.

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 23, 1977

Mr. HARRY F. BYRD, JR. Mr. President, there have been recent press reports that the U.S. negotiators have agreed to turn over to Panama the jurisdiction, defense, and operation of the Panama Canal.

This, if it is true, would be in direct contravention of President Carter's campaign pledge that he would "never give up complete or practical control over the Panama Canal Zone."

There has been a great deal of distortion of the facts surrounding U.S. rights of sovereignty over the Panama Canal Zone and I commend to my colleagues an article by Anthony Harrigan which appeared in the March 2, 1977, Farmville Herald entitled "The Panama Canal Issue."

I ask unanimous consent that the text of this article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE PANAMA CANAL ZONE

(By Anthony Harrigan)

The American Congress and people should hold President Carter to his campaign promise that he would "never give up complete or practical control over the Panama Canal Zone."

There is need to bring up the matter of Mr. Carter's promise because all the signs point to a major effort by the State Department to seek ratification of a treaty that diminishes or relinquishes America's sovereign control over the strategically vital Panama Canal Zone.

Indeed, a massive campaign is afoot to popularize U.S. relinquishment of authority in the Panama Canal Zone. A drumfire of propaganda is distorting history.

Evidence of this appeared recently in a shocking editorial in The New York Times (Feb. 14, 1977). The Times said of the Panama Canal:

"We stole it and removed the incriminating evidence from our history books . . . Our people sit in colonial luxury in the Canal Zone, defending this history and mythology more than the canal and driving politicians to demagogic fury against any change in the arrangement."

This is rewriting history with a vengence. The American record in connection with the Panama Canal is an open book. Lt. Gen. V. K. Krulak, editorial director of the Copley Newspapers, set forth this record in a recent article entitled "Panama: Strategic Pitfall."

He points out that as to the matter of sovereign control, there is no question whatever, adding that "The Canal Zone is not in any sense Panamanian territory." He observes that the 1903 treaty granted the United States "perpetual sovereignty over the Canal Zone to the entire exclusion of the exercise by the Republic of Panama of any such sovereign rights, power or authority."

The Panama Canal is no more Panamanian territory than New Mexico is Mexican territory or Alaska is Russian territory.

In a lengthy proceeding, the U.S. Supreme Court rules: "It is hypocritical to contend that the title of the United States is imperfect, and that the territory described does not belong to this nation." So much for The New York Times' contention that the Canal Zone was stolen from the Panamanians.

As a matter of fact, the U.S. paid Panama $160 million for clear title to the Canal Zone. Since then, as Gen. Krulak reports, "The country has flourished and now, largely due to Canal related employment, the one and one-half million Panamanians have a living standard equaled by few other Latin American nations."

What about the contention of the giveaway advocates that the Panama Canal isn't strategically valuable to the United States? Gen. Krulak writes in Strategic Review that "In the past two and one-half years some 750 U.S. Navy ships transited the waterway bound east or west on affairs related to our national security."

The New York Times insists that the Panamanian regime of President Torrijos "will be fair and flexible." Gen. Krulak points out Panamanian control of the canal would mean Marxist control of the strategic waterway. He says: "The principal government officials in Panama are all Marxists, including the chief of state, Omar Torrijos, a National Guard lieutenant colonel who seized power by force from the elected president, Dr. Arnulfo Arias, in 1968." He adds that "hatred and defamation of the United States are as much a national policy (of Panama) as are close ties with the communist world, most particularly the Soviet Union and Cuba."

U.S. Sen. Strom Thurmond (R-S. C.) has led the fight in the Senate against surrender of the Panama Canal. His resolution opposing such a surrender has been supported by approximately one-third of the Senate. It should command the support of all senators concerned about hemispheric security and America's sovereign rights.

A giveaway of the Panama Canal would not be a yielding of some foreign zone of influence. The Panama Canal is U.S. territory, and should be retained in perpetuity as the Panama Canal treaty provides.

Gen. Krulak has capsuled the Panama Canal issue in these words: "If the Congress concludes that the U. S. can risk sharing those 50 vital miles of lifeline with a hostile communist government; even worse, if it agrees to give the Canal away, it will have done this country more harm than a dozen succeeding Congresses could repair."

OPPORTUNITIES FOR ADOPTION ACT OF 1977

Hon. Yvonne Brathwaite Burke

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mrs. BURKE of California. Mr. Speaker, today I am introducing the Opportunities for Adoption Act of 1977 to improve the prospects of adoption for more than 100,000 children now considered unadoptable because of the lack of clear direction and objectives in our multiple public and private adoption agencies. Identical legislation, S. 961, has been introduced by Senator CRANSTON and cosponsored by Senators WILLIAMS, RIEGLE, RANDOLPH, PELL, BROOKE, CHURCH, DURKIN, HUMPHREY, and INOUYE. The Senate bill has been referred to the Human Resources Committee and the Subcommittee on Child and Human Development will hold hearings on April 4.

It is estimated that there are at least 320,000 children living in foster homes or in institutions across the country either because their legal status is uncertain or because they are considered difficult to place. In California alone, there are 27,849 children in foster homes. Many of these are "special needs" children, generally defined as those who have not been adopted due to their age—usually over 6 years—race, ethnic group, mental, physical or emotional disability, or because they are members of a sibling group.

Before discussing the substance of my bill, I would like to describe the California experience in the adoption of children with special needs.

Since it was established 27 years ago, the Los Angeles County Department of Adoptions has placed nearly 30,330 children, making it the largest adoption agency in the world. The total number of children placed has decreased since their peak year in 1968, when some 2,500 children were placed. However, of the total of 830 adoptions in 1974, 87.6 percent or 727 were special needs children. Of the 830 children, 186 were black children and 67 were white infants. During the period January to June 30, 1975, 420 children were placed of whom 359 were special needs children.

Los Angeles' adoption services have been quite successful for a number of reasons, among them the existence of three programs which have stressed recruitment and subsidy payments. In 1967, a unique recruitment program called Ben Hunter's Adoption Show, began broadcasting live on Station KTTV in Los Angeles every Thursday afternoon for 10 minutes. It has been the longest running public service show on U.S. television and has found more homes for the hard-to-place than any other recruitment program. In 1970, this program was awarded an Emmy by the Hollywood Chapter of the Academy of Television Arts and Sciences.

In 1969, the landmark legislation, "aid for the adoption of children," sponsored by California Lt. Gov. Mervin Dymally, began as a pilot program to increase the adoption of special needs children. Under the program, fees of services may be waived or reduced and some subsidies are made available for approved families, not to exceed the cost of foster care. The program became permanent in 1971.

In 1970, the Reach Out program began as a pilot project to identify and free for adoption, children who were in foster homes for extended periods of time and stood little chance of returning to their own homes. In 1971, more than one-third of all children placed were adopted by their foster families.

As has been recognized, the Department's services to children with special needs is outstanding. The legislation I

have proposed would allow the Los Angeles experience to be shared nationwide.

Briefly, my bill would address itself to three basic areas. First, it would promote the establishment of uniform adoption regulations in the United States in order to eliminate jurisdictional and legal obstacles to adoption. In all too many cases, it is difficult for adoptive parents to seek children in another State because of legal obstacles. My bill would open the prospective field for adoptive parents to the Nation as a whole, rather than just to individual States.

Second, the legislation would provide Federal financial assistance to States for the purpose of assisting adoption gencies and prospective adoptive parents in meeting certain costs of adoption in order to remove or alleviate the financial obstancles to adoption by qualified individuals.

Finally, the bill provides for the establishment of a National Office of Adoption Information and Services in the Department of Health, Education, and Welfare to insure quality standards for adoption services and to provide for a national adoption information exchange system to match children in need of adoption with prospective adoptive parents.

I would also call your attention to two provisions added in an effort to increase the likelihood of adoption for children with special needs.

The first, section 4(e), makes it possible for children with problems which will keep them dependent for an indefinite length of time to continue to receive a subsidy past their 18th birthday. Many children have remained unadoptable because of medical, psychological, or other problems which will keep them indefinitely dependent upon their adoptive parents.

The second provision, section 4(f), will enable a child, upon certification by the adoption agency, to continue to receive any supportive or supplemental aid to which he or she was entitled while in a foster care placement. This will further remove financial constraints which have denied foster children the love and security of a permanent family.

These two provisions will make the adoption process available to all families and will encourage the adoption of special needs children.

This Federal legislation will not interfere with the traditional role of the State and local agencies in domestic adoption policy. On the contrary, this legislation would act as a catalyst to draw this problem to national attention and to ease many of the obstacles which have heretofore interfered with the ability of this Nation to care for its unadopted children.

In addition, Federal subsidy is a concrete way to decrease overall expenditures for care of these children. Costs have been found to be much higher if a child remains in either an institution or a foster home. Under most State laws, the State must maintain guardianship and a caseworker must provide supervision until the child reaches age 18.

The grants provided by this bill would help agencies meet the costs of locating and freeing for adoption those children who have been in foster care for long periods. It would also provide aid for the placing of these children, provide prenatal and postnatal services to mothers voluntarily planning to place their children for adoption and would provide counseling services for children and parents.

By speeding up the process through subsidized adoption—currently practiced by 41 States and the District of Columbia—the States will actually save money. These savings can be measured by the cost involved to the State if a child is not adopted. For example, in Los Angeles, the actual cost of the subsidized adoption program for the first 2 years was $1,134,712. The cost of maintaining the same children in foster care to age 18 is projected to be $35,121,240. The Los Angeles County Department of Adoptions estimates its savings at $31,621,685 after administrative costs.

Even with a medical subsidy to provide for a child under subsidized adoption, the overall cost to the State would be less than if the child were to remain under State care.

The need for this legislation is clear. At present, adoptions in the United States largely present the picture of a system traveling in 50 different directions. Those parents wishing to adopt often are faced with one State pool of children from which to choose because of legal obstacles and redtape involved in attempting interstate adoptions. Faced with these problems, many families who are wedded to the idea that they must have a healthy white infant turn to the illegal markets for children.

The tragedy of adoption today is that the adopting public remains largely white—with the idea that adoption means a healthy white infant. We must change the myths prevalent in this Nation concerning so-called adoptable children. The Opportunities for Adoption Act will open the way for the American people to open their hearts to our children in need.

The Opportunities for Adoption Act has the support of many groups and individuals working in the area of adoptions. I would note with particular appreciation those who have assisted in shaping this legislation: Mrs. Elizabeth S. Cole, director, North American Center on Adoption of the Child Welfare League of America; the National Conference of Catholic Charities; the Black Child Development Institute; Peter W. Forsythe, vice president, the Edna McConnell Clark Foundation; the American Public Welfare Association; the American Academy of Pediatrics; the North American Council on Adoptable Children, and the Coalition on Children and Youth.

MILITARY UNIONS

HON. HARRY F. BYRD, JR.

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 23, 1977

Mr. HARRY F. BYRD, JR. Mr. President, there are two bills currently before the Senate Armed Services Committee which would prohibit unionization within the U.S. military.

I believe this is a matter which requires the closest attention of the Congress.

The March 21, 1977, edition of the Richmond Times-Dispatch carried an editorial on this important matter and I ask unanimous consent that the text of this editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BAN MILITARY UNIONS

With the Carter administration's secretary of labor having taken a sympathetic view of the unionization of the military forces, it was reassuring to hear the administration's secretary of defense tell a congressional committee Friday that collective bargaining in the military is "fundamentally incompatible" with the need for "an unencumbered command and control system."

But it was not reassuring to hear Defense Secretary Harold Brown decline to urge enactment of a law banning military unions. Both he and Navy Secretary W. Graham Claytor Jr. suggested that a ban against members of the armed forces joining unions might be unconstitutional.

This led Chairman John C. Stennis of the Senate Armed Services Committee to tell the Defense Department officials to "make up your minds which way you are going."

Secretary Brown did say he would support a law banning union organizing on military bases. But such a statute would not get to the root of the problem.

Even after Sen. Strom Thurmond, R–S.C., produced a flyer promoting a meeting to discuss military unionization, to be conducted by the American Federation of Government Employes for servicemen at the Oakland Army Base tomorrow, Secretary Brown said he believed the unionization threat to be "prospective and not immediate" and that "I think it is important not to overreact."

What Secretary Brown and the Carter administration should be doing is searching for ways to prohibit military unionization *now*, instead of putting the emphasis on going slow and not overreacting. Certainly no responsible member of Congress or any other governmental official favors passage of an unconstitutional law, but these officials should be making every reasonable effort to find ways to ban military unions, instead of risking the nation's security by tip-toeing around the issue.

We reject the idea that this nation cannot make it clear that unionization of the armed forces will not be tolerated. Even the present labor-sympathetic Congress must have sense enough to realize that failure to impose such a ban, by some lawful means, could lead to national disaster, given the labor bosses' announced intention to organize the men and women in uniform.

PERSONAL EXPLANATION

HON. WILLIAM S. MOORHEAD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. MOORHEAD of Pennsylvania. Mr. Speaker, I have long supported the Small Business Administration and its work. Unfortunately, I was not in the Chamber on Monday when the House voted on

the conference report on H.R. 2647, increasing SBA loan limitations and surety bond authorizations. Had I been present, I would have voted "yea" on rollcall 67.

THE "WORK TEST" RELATIVE TO THE FEDERAL-STATE UNEMPLOYMENT COMPENSATION SYSTEM

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. STEIGER. Mr. Speaker, 2 days ago the House passed H.R. 4800, the Emergency Unemployment Compensation Extension Act of 1977. In this connection we had quite a bit of discussion regarding the "suitable work" provisions of that bill.

For the information of the Members I would like to share a letter which I received from the Department of Labor concerning the administration of the "work test" under various regular State unemployment compensation programs.

Specifically, the letter provides an explanation of the provisions of each State law with regard to when a UC beneficiary is required to register with the Employment Service in order to be eligible to receive, or continue to receive, UC benefits. The letter also includes some limited discussion of how these provisions are in fact administered. Lastly, accompanying the letter is a State-by-State breakdown of the number of UC claimants filing initial claims for the 12-month period ending June 30, 1976, and the number of these claimants who were actually required to register for work with the Employment Service.

For reasons of economy, I have not inserted in the RECORD all of the attachments described in the letter but the letter itself and the attached chart will be of interest to those concerned with this aspect of the unemployment compensation program.

The material follows:

U.S. DEPARTMENT OF LABOR, EMPLOYMENT AND TRAINING ADMINISTRATION,

Washington, D.C., March 17, 1977.

Hon. WILLIAM A. STEIGER,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN STEIGER: Thank you for your letter of February 25, 1977, in which you asked for information concerning application of the "work test."

You first ask for an explanation of the provisions of each State law with regard to when a UC beneficiary is required to register with the Employment Service.

In 17 States, registration is required by law for all claimants. In actuality, the requirement might be applied differently by the States, according to how "registration" is defined. Following are the States in this category:

Alaska, Arizona, Connecticut, Idaho, Iowa, Kentucky, Massachusetts, Michigan, Minnesota, Missouri, New Hampshire, North Carolina, Puerto Rico, Rhode Island, Texas, Vermont, West Virginia.

In the 35 remaining States the law specifies certain categories of claimants who may not be required to register, such as those attached to regular jobs, or in circumstances with respect to which the agency finds that registration would be oppressive or inconsistent with the purposes of the act. While there are minor variations from State-to-State, the intent of the waiver provision is to relieve the Employment Service from the necessity to take unneeded work registrations and relieve claimants from the inconvenience of registering when no purpose would be served. The States in this category follow:

Alabama, Arkansas, California, Colorado, Delaware, District of Columbia, Florida, Georgia, Hawaii, Illinois, Indiana, and Kansas.

Louisiana, Maine, Maryland, Mississippi, Montana, Nebraska, Nevada, New Jersey, New Mexico, New York, North Dakota, and Ohio.

Oklahoma, Oregon, Pennsylvania, South Carolina, South Dakota, Tennessee, Utah, Virginia, Washington, Wisconsin, and Wyoming.

You next asked for a description of how these State law provisions are administered. It is impossible to give a single categorical answer to this question. Practices vary widely from State-to-State, from time to time, and even within States. Primary considerations are to provide the best possible placement service to applicants and employers, to avoid unnecessary reporting and waiting for claimants, and to make the most effective use of Employment Service resources. These considerations must be applied in local areas where economic conditions may fluctuate widely, rapidly, and unpredictably.

The overall guidance from the Federal level is expressed in the Secretary's Standard for Claim Filing, Claimant Reporting, Job Finding, and Employment Services, which was revised most recently in August 1970. We believe this Standard to be still an effective guide for the States. Section 5002 covers responsibilities for provision of necessary services. You will note that considerable flexibility is built into the requirements, so that claimants who need and desire services may be handled separately from those on temporary layoff, for example.

When the Standard was published, an implementing and explanatory issuance, Unemployment Insurance Program Letter No. 1089, was released with it. The Program Letter expands further on the methods and goals of the work registration process for UI claimants. While economic conditions have changed radically since the guides were published, we think they still are effective and realistic.

A more recent publication, General Administration Letter No. 5–77, addresses the whole area of claimant availability for work. You will note that selective registration for work again is stressed.

In regard to actual processes now taking place in the various State agencies we do not have current or specific information. In general, we can say that claimants are screened by UI, and that those who are on short term layoff or subject to waiver under other provisions, are not required to register. All others are required to register.

Your third request is for the number of initial claimants and number required to register for work during the last calendar year. (The most recent data we have on Employment Service activities is for the 12 months ending June 30, 1976).

The table enclosed shows the new initial claims for the fiscal year and UI claimants who registered for work with the Employment Services during the same period. This data does not respond exactly to your question because the claims figures include an undetermined number of persons who filed more than one initial claim, and claimants later found to be ineligible. The table will, however, give you general information about the extent of work registration of UI claimants. We hope that this information is helpful to you and will be glad to furnish any further assistance that we can.

Sincerely,

LAWRENCE E. WEATHERFORD, Jr.,
Administrator, Unemployment Insurance Service.

UI CLAIMANTS FILING INITIAL CLAIMS AND REGISTERED WITH ES, JULY 1975 TO JUNE 1976

	Claimants filing initial claims [1]	UI claimants registered with ES [2]
Total	12,971,496	4,131,975
Alabama	223,269	77,550

REMOVING THE EARNINGS LIMITATION ON SOCIAL SECURITY

HON. BENJAMIN A. GILMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. GILMAN. Mr. Speaker, on January 12, 1977, I introduced H.R. 1768, legislation eliminating the earnings limitations on social security benefits paid to individuals 65 and over. Please see CONGRESSIONAL RECORD, January 13, 1977, 1110.

I had several prime reasons for introducing this legislation: First, many

senior citizens cannot retire on the combined social security benefits and the low earnings limitation; second, elderly citizens are penalized for their willingness to work; and, third, the earnings limitation, by discouraging many elderly citizens from working, deprives this Nation of the valuable skills and talents of many senior citizens.

Following introduction of this legislation, a number of my colleagues expressed interest in this legislation. Accordingly, I am reintroducing this bill which is cosponsored by the following 24 Members of the House:

LIST OF ADDITIONAL COSPONSORS OF H.R. 1768

Mr. Anderson of Illinois, Mr. Badillo, Mr. Broyhill, Mr. Burgener, Mr. Buchanan, Mrs. Collins, Mr. Corcoran of Illinois, Mr. Cornwell, Mr. Dicks.

Mr. Dornan, Mr. de la Garza, Mr. Edwards of Oklahoma, Mrs. Fenwick, Mr. Glickman, Mr. Hall, Mr. Horton, Mr. Jones of North Carolina.

Mr. Kindness, Mr. McCloskey, Mr. McKinney, Mr. John T. Myers, Mr. Patterson of California, Mr. Pritchard, Mr. Richmond.

AUTHORIZATION TRANSFER PROCEDURES

HON. JOE MOAKLEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. MOAKLEY. Mr. Speaker, this week the House will consider a bill—H.R. 3965—to authorize appropriations for research and development programs of the Federal Aviation Administration.

During consideration in the Committee on Rules, I expressed my concern that section 2 of the committee substitute could be read as permitting reprogramings to be instituted by letter from the Committee on Science and Technology without the customary review by the Committee on Appropriations.

This was clearly not the intent of the committee and agreement has been reached that the committee will offer a technical amendment clarifying the authority of the Committee on Appropriations. I insert the text of section 2 in the RECORD at this point, indicating the amendment by conventional typographical device:

SEC. 2. Notwithstanding the purposes for which funds are authorized in paragraphs (1)–(4) of the first section of this Act, funds authorized by such paragraphs may be authorized for any other program or project not excluded by section 4 of this Act for research, development, or demonstration under section 312(c) of the Federal Aviation Act of 1958 or section 14(d) of the Airport and Airway Development Act of 1970 if notice of such program or project has been given to the Speaker of the House of Representatives, the House Committee on Science and Technology, the President of the Senate and the Senate Commerce Committee in a manner containing a full and complete statement of the proposed program or project and the facts and circumstances relied on in support of such program or project and (a) a period of 30 days has passed after the date such notice was received, or (b) each such committee before the expiration of such period has transmitted to the Secretary written notice to the effect that such committee has no objection to the proposed action.

On the basis of the agreement to offer the amendment, I supported a rule and will support the bill. But I would like to express my grave reservations about the whole concept embodied by section 2. I can understand that this sort of flexibility may be necessary and desirable for R. & D. programs.

But I would strenuously object to any similar provision in larger or more controversial authorizations. It must be recognized as, essentially, a shortcircuiting of the legislative process and I think there are very few situations in which such an approach is desirable.

RELOCATION ASSISTANCE

HON. ROBERT F. DRINAN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. DRINAN. Mr. Speaker, in 1970 the Congress enacted the Uniform Relocation Assistance and Real Property Acquisition Policies Act. The purpose of the statute was to insure that individuals and businesses, forced to move because of programs financed by Federal funds, would be properly compensated for the relocation.

Such relocations generally fall into three categories, those which result from: First, direct Federal action, such as the construction of a Federal building; second, State action using Federal funds, such as a highway construction program; or third, private action using Federal funds, such as a hospital expansion program. By the terms of the 1970 act, it was not clear whether relocations in all three categories would be covered by the statute. In fact, on December 11, 1970, a few days after the law became effective, Congressman Ryan of New York expressed the view that relocations required by private actions using Federal funds were not within the terms of the statute. (See 116 Cong. Rec. 41254–55.)

The application of the 1970 act to relocations arising out of Federal programs operated by private persons has been the subject of litigation. In 1971, Parlane Sportswear Co., a women's clothing manufacturer in Boston, sought relocation assistance from the Department of Health, Education, and Welfare because of impending displacement by Tufts University, a private college operating a cancer research center with Federal grants. The agency declined payment and the company initiated an action in the Federal court. Ultimately, its claim was denied because the court of appeals held that the relocation statute did not cover displacements by private organizations using Federal funds. *Parlane Sportswear Co., Inc.* v. *Weinberger* (513 F.2d 835 (1st Cir.), *cert. denied sub nom.*) *Parlane Sportswear Co., Inc.* v. *Mathews*, (423 U.S. 925 (1975).

Thus in Parlane the court decided what Congressman Ryan 5 years earlier had protested. He had said that it was unfair to exclude from the statute forced relocations that are connected with Federal programs providing assistance to private organizations. Whether the displacement is caused directly by Government action or indirectly through funds it provides does not warrant differing treatment of the displaced persons.

Today I am introducing a bill which would correct the inequities in the relocation act which the decision of the court of appeals and Congressman Ryan's comments revealed. The proposal would provide such assistance to persons displaced by private groups using Federal funds to the same extent they are covered by State displacements using Federal funds. Thus when a Federal agency awards a grant to a private organization, it would be required to include some assistance for persons forced to relocate by the acquisition of real property by the grantee.

A second part of the bill would allow persons already displaced by private organizations using Federal funds to file a claim with the Attorney General to recover the costs incurred by forced relocations since the enactment of the statute in 1970. Such persons, which would include both individuals and businesses, would have to seek such repayment within 3 years of the effective date of this bill. Because such payments are in the nature of judgments against the United States and because of the uncertain amounts involved, the bill does not fix an authorization level.

The text of the bill follows:

H.R. 5475

A bill to amend the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 to extend relocation assistance to persons displaced as the result of real property acquisitions by private persons for federally assisted programs or projects, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 (42 U.S.C. 4601 et seq.) is amended by—

(1) redesignating sections 220 and 221, including any references thereto, as sections 221 and 222, respectively; and

(2) by adding immediately after section 219, the following new section:

"DISPLACEMENT BY PRIVATE PERSONS

"SEC. 220. Whenever real property is acquired by any person for any program or project for which such person has received Federal financial assistance and such acquisition will result in the displacement of any other person on or after the effective date of this section, such acquisition shall, for the purposes of this Act, be deemed an acquisition by a State agency of the State in which such property is located, and the person acquiring such property shall make all relocation payments and provide all assistance required of such a State agency by this Act when such State agency acquires real property (other than acquisition as the agent of the Federal Government as provided in section 208).".

SEC. 2. (a) Whenever real property was acquired by any person for any program or Federal financial assistance and such assistance resulted in the displacement of any other person after the effective date of the Uniform Relocation Assistance and Real

Property Acquisition Policies Act of 1970 and before the date of enactment of this Act such person who was displaced may submit a claim to the Attorney General for compensation from the United States in an amount equal to any compensation that person would have been eligible to receive from the person acquiring such property if the amendment made by the first section of this Act had been in effect at the time of such acquisition.

(b) The Attorney General shall, after a determination made on the record and after opportunity for a hearing, pay each person submitting a claim under subsection (a) of this section so much of such claim as the Attorney General determines is valid.

(c) No claim may be submitted for compensation pursuant to this section after the last day of the third year which begins after the date of enactment of this Act.

(d) For purposes of this section, the term "person" means any individual, partnership, corporation, or association.

PERICLES "SPUD" LABOVITIES

HON. JOSEPH D. EARLY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. EARLY. Mr. Speaker, on April 1, 1977, Mr. Pericles "Spud" Labovities will be retiring after 25 years of dedicated service to the YMCA in Worcester, Mass. At this time he will be recognized by the countless friends that he has made through his association with the "Y" and his many years of unselfish dedication to our youth.

His most noteworthy contributions have been his direction of the Worcester Central Y Junior Church Basketball League, involving 42 different churches, over 2,000 players and 250 volunteers; the Senior Church Basketball League with 28 different churches, 1,500 players and 150 volunteers; and the Junior Church Cheerleaders Contest with 14 churches, 1,000 girls and 50 volunteers participating.

This league is the oldest and largest of its kind, participating every Friday and Saturday night. The league itself started in 1915 and has been under the direction of Spud since 1952. The YMCA Church League once was a very strong program throughout New England, but today the Worcester Central League stands as one of the few remaining and that is due to the many years of hard work and dedication that Spud has contributed.

I believe it is a great credit to our community to have a man of Spud's nature and he has been a great asset to the many young men and women who have come in contact with him through the Y League. Our communities need more people like this to help our youth and confirm in them the belief that there are people who care and are willing to give of their time and efforts to show their concern.

Spud certainly is a living testament of the YMCA slogan "Help the 'Y' to Help Youth—Be a Sustaining Member!" Many thanks, Spud Labovities, for all of your contributions.

FDA SACCHARIN BAN COUNTERPRODUCTIVE

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. BOLAND. Mr. Speaker, the proposed ban of the sugar substitute saccharin has caused a great deal of concern among a great many people. Not only are millions of users of saccharin concerned, but many well known health experts are questioning the data upon which the proposed ban is based. The matter is currently under study by a House Health Subcommittee and the Department of Health, Education, and Welfare.

One highly regarded expert in the field of cancer research is Dr. Kurt J. Isselbacher, chairman of the Harvard University Cancer Committee. Dr. Isselbacher recently testified before the House Interstate and Foreign Commerce Committee's Subcommittee on Health and the Environment. He believes as I do that the test results that provide the basis of this ban are unrealistic when applied to humans. For a human to ingest the amount of saccharin consumed by the rats in the Canadian tests, they would have to consume 56 saccharin tablets a day, or drink hundreds of diet sodas each day. The average saccharin user consumes one one-thousandth this amount or less in average use. Dr. Isselbacher concludes his testimony by calling the FDA ban "counterproductive," and suggests the FDA carefully weigh the health benefits gained by the millions of diabetics and overweight persons in the United States who use saccharin before instituting the ban.

Mr. Speaker, I believe each food agent should be examined individually by the FDA. Clearly there should not be hasty action taken on unrealistic data. I believe the U.S. Government should conduct comprehensive tests on saccharin before going ahead with this ban. In addition, I support legislation amending the Delaney clause of the Food, Drug and Cosmetic Act which retains the intent of the clause while at the same time providing a realistic formula for making decisions on the carcinogenicity of food additives.

Mr. Speaker, at this time I would like to insert a copy of Dr. Isselbacher's testimony on the saccharin issue:

TESTIMONY OF KURT J. ISSELBACHER, M.D.

Congressman Rogers and distinguished Members of the Subcommittee:

I am Kurt J. Isselbacher, M.D., Professor of Medicine and Chairman, Executive Committee of the Departments of Medicine, Harvard Medical School, Boston and Chairman of the Harvard University Cancer Committee.

I am here to express to you my personal concerns as a physician and clinical investigator about the FDA proposal to ban the use of saccharin in foods and beverages because saccharin has been found to cause malignant bladder tumors in rats. As Chairman of the Harvard University Cancer Committee, I can assure you that I am deeply concerned about the problem of environmental carcinogens. The issue before us today clearly emphasizes the complexity of the problem of determining whether a given chemical or agent poses a potential or real human hazard.

In the case of saccharin I believe (1) that the results of the available rat experiments appear to have been overinterpreted in regard to their application to man; and (2) that there is an extensive body of information on human consumption of saccharin over the last 70 years to provide some indication as to whether or not saccharin may have a role in producing human bladder cancer; finally (3) quantitative extrapolation from animal studies to evaluate the human hazard entails many uncertainties, and each case must be individually evaluated—taking into consideration many factors such as (a) whether the agent is a weak or strong carcinogen, (b) whether the results have been replicated in other species or other test systems, (c) how the data compare with the amounts that might be consumed by man, and (d) finally, an assessment of the possible social, economic or medical benefits.

A. The rat experiments.—

In some of the rat experiments the amounts of saccharin used were as much as 8,000 times the amounts calculated to have been consumed by the average, adult male in 1972 [2.5 *gm*/Kg/day (rat) versus 0.3 *mg*/Kg/day(man)][1]. I suspect there would be few individuals who could ingest even 1/1,000 of such tumor-producing dose (weight for weight in rats)—namely, 56 saccharin tablets a day. This raises the important question of the potency of saccharin as a carcinogen and balancing this against the amounts that might possibly be ingested by a human being during his or her lifetime.

If one examines the data indicating that cancer of the bladder also occured in second generation rats which have been continually fed on saccharin, it must be noted that, since saccharin crosses the placenta, the fetus must have been exposed to an even higher dose than that to which the adult animal was exposed.

We recognize that giving excessive doses of any drug or agent to an experimental animal can have adverse or toxic effects. Imagine if water, salt or sugar were to be introduced today as possible agents for use by us and fed to rats in these excessive doses. The animals would undoubtedly die before they could develop a malignancy!

The extrapolation of experimental carcinogenicity data to the human situation is strengthened by obtaining results in more than one species or more than one system. Apparently the feeding of saccharin to monkeys has not produced evidence of malignancy after 6.5 years. Extensive use is also currently being made of the "Ames Test" which monitors the development of bacterial mutations as a possible indication of carcinogenicity. The available data indicate that saccharin is not mutagenic in the Ames "Salmonella" system.

B. The Human Experience.—

Man has often been accused of rat-like and at other times mouse-like behavior, and perhaps it is expected that we might look askance at experiments in mice or rats. However, even with subhuman primates, such as baboons and monkeys, major discrepancies are known to occur, and adverse effects have been found in such primates, but not in man, presumably because of metabolic differences.

It is fortunate for us that saccharin has been used for over 70 years and that there are numerous well-designed epidemiologic studies by workers from Oxford[1,2,3] (England), Baltimore[4] and Boston[5] on the possible relationship between saccharin ingestion and bladder cancer. Many of these studies have been carried out in diabetics known to

consume more saccharin than the general population. In all of the studies, even with evidence of an above average saccharin intake, no increased incidence or mortality of bladder cancer has been demonstrated. It is recognized it may take 20 or more years for a carcinogen to produce cancer in man. However, in one of the reports, over 10 percent of the diabetics studied consumed saccharin for more than 25 years. Thus, clearly to date there has been no epidemic of bladder cancer as a result of saccharin consumption!

C. The Risk/Benefit Ratio—

While the "Delaney Clause" prohibits the use in food of any ingredient shown to have produced cancer in animals or man, it is evident that more than this must be considered. Actions must be based upon individual considerations.[6] The criteria appropriate for one agent may not necessarily apply to another.

I would submit to you that, in the case of saccharin, the available data indicate that the risk of humans for developing cancer from saccharin in the amounts ingested by the average individual is remote; the harm, however, which may occur to millions in the absence of a non-nutrient sugar substitute is great. In this country the problem of obesity is far greater than that of malnutrition. The problem is so great in fact that a significant number of patients with obesity are subjected to a special type of surgery (intestinal bypass) which in fact is associated with significant hazards, including death. Patients with these disorders need help, and here is an example where the medical clearly outweighs the remote risk based upon the rat data. Also, as you have heard and as you are aware, diabetics clearly benefit from the use of non-nutrient sweeteners or sugar substitutes. Patients with obesity and diabetes are indeed at risk—but not in my view from developing cancer as a result of the ingestion of saccharin—but at risk of developing the serious and well-recognized complications associated with these diseases.

On an anecdotal note, several days ago, a distinguished international chemist and former Presidential Science Advisor told me, "I'm not worried. I have stored up enough saccharin to last me a lifetime!" That's fine for him, but not for those of us who do not have such a stockpile.

Let me conclude by indicating to you that in my personal view given the current information, the banning of saccharin is counterproductive, and I believe is not indicated, until or unless some "safer" non-nutrient sugar substitute is available.

THE CRITICAL NEED FOR ENERGY CONSERVATION

HON. ROBERT F. DRINAN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. DRINAN. Mr. Speaker, I would like to bring to my colleagues' attention an article on energy conservation which recently appeared in the National Journal. This article indicates that for the first time, energy conservation is beginning to receive the attention which it clearly deserves as an important component of our national energy plan.

I am delighted to hear that President Carter has embarked upon a major energy conservation effort. Many of us in the Congress have repeatedly urged that conservation be the cornerstone of our energy policy. In view of the emphasis which has been placed on producing new energy sources, conservation has taken a back seat. This is clearly shown by the fact that while energy production receives more than 93 percent of the 1977 Federal energy research and development budget, conservation receives less than 7 percent.

The need for a major emphasis in the energy conservatives area is also emphasized by the fact that for the first time in 3 years total energy consumption increased in 1976. Fuel use declined in both 1974 and 1975, but then rose 4.8 percent above the 1975 level in this past calendar year. This increase in consumption greatly disturbs me, as it shows that without constant reminders, prodding and encouragement, America will return to its former practices of wasting valuable fuel supplies.

Mr. Speaker, my strong belief in energy conservation has led me to introduce two major pieces of legislation. My first bill, the Solar and Energy Conservation Commercialization Act, H.R. 3981, has already attracted the cosponship of over 50 Members of Congress. This bill encourages the purchase and installation of energy conservation and solar power equipment by offering low interest loans and grants to homeowners, small businesses and nonprofit organizations. For the homeowner, for example, low interest loans of up to $10,000 for solar devices and $4,000 for energy conservation equipment would be available under the provisions of the legislation.

My second bill, the Industrial Energy Conservation Act, H.R. 4711, has also drawn the support of many Members of Congress, with 40 cosponsors to date. H.R. 4711 directs the Energy Research and Development Administration or its successor to establish a system of research, development and demonstration in energy conserving industrial technologies. Low interest loans and loan guarantees would also be provided to companies to encourage the installation of energy efficient equipment and machinery.

In prior years, Mr. Speaker, there was great reluctance on the part of the administration to aggressively pursue energy conservation. But now, with President Carter's commitment to reducing U.S. fuel consumption, I am greatly encouraged that we will regain the initiative in cutting down our energy use. I am hopeful that the legislation which I have outlined above will be enacted into law as a result, thereby helping to mount a new offensive against energy waste.

The following article explores the subject of energy conservation in much greater depth, and I recommend its contents to my colleagues:

[From the National Journal, Mar. 12, 1977]

ENERGY CONSERVATION BEGINS AT HOME—WITH THE STATES AND CITIES

(By Neal R. Peirce and Jerry Hagstrom)

Winona, Minn., hopes to become energy self-sufficient by the year 2000 through conservation and the use of such elements as the sun and wind.

Pratt, Kan., burns the methane gas produced from feedlot wastes, crop residues and solid wastes to generate electricity.

In several states, homeowners provide information on their homes, and a computer shows how they're wasting energy, how much it's costing them, how energy could be conserved and how much retrofitting (insulation) and the like would cost. Other states provide small grants for insulation of homes.

Impressive, yes. But state and local government leaders say these grassroots efforts have only scratched the surface of what's possible in energy savings now that President Carter—and bad weather—are popularizing energy efficiency.

In his amendments to President Ford's fiscal 1978 budget. Carter proposed just what local officials had been demanding: federal government technical assistance and financial aid. And all winter—as the East has faced an energy crunch and the West experienced a drought and anticipates summer electricity shortages—energy conservation plans have been building.

Carter's emphasis on conservation and the energy problems of 1977 have created "an unparalleled opportunity for local governments to put together a coordinated and committed program of energy conservation that can have an astounding impact on the economy and the whole country," Phyllis Lamphere, Seattle city councilwoman and president of the National League of Cities, told National Journal.

Americans don't fully recognize, Lamphere said, the profound inflationary effects of "the old syndrome of more and more power generation" from fossil fuels and nuclear plants, both non-renewable resources that have been growing rapidly in cost.

"The new Administration seems committed to the proposition that the future of this country is closely tied to a commitment to energy conservation," Lamphere added.

CARTER'S PLANS

Carter's budget amendments, made public on Feb. 22, call for approximately the same amount of money for energy development that Ford's had but double the amount for conservation and research on short-term solutions to energy problems. To do this, Carter proposed cutting nuclear research and development efforts by $304 million in fiscal 1978, including a $199 million decrease in budget authority for the liquid metal fast breeder reactor.

The budget for conservation and research programs would be increased by $22 million in 1977 and $244 million in 1978, Carter said. Of the 1978 increase, $160 million is for research and development, including development of the electric car.

Much of the money is earmarked for programs approved by Congress last year, but

held back by the Ford Administration, which emphasized development of nuclear power, shale oil and synthetic fuel.

The newly funded programs include $2 billion in loan guarantees to encourage home insulation, accelerated implementation of weatherization assistance to provide insulation for low-income persons, grants to states to inform interested homeowners about ways to save energy, and development of an experimental energy extension service. Grants for offices to represent consumers before utility regulatory commissions also are included.

"A lot of the programs President Carter is talking about the states pioneered and figured out where they made sense," Edmond F. Rovner, director of state-federal relations for the National Governors' Conference told National Journal. "(The states) are ready to go, they're short of money to do it, and he's providing funds for them."

Rovner noted that the extension service was endorsed by the governors last year and "would at least put people out in the field to carry the message of the technologies and the implications of it from the state governments out to the ultimate users. It would work the same way the agricultural agents are the link between the technology and the users."

The White House did not consult with the Governors' Conference on the conservation programs, Rovner said, but Carter's transition team did, and several of Carter's energy advisers had worked closely with the governors in their pre-Carter posts. The loan guarantee program, Rovner pointed out, was "worked out" between the Governors' Conference and S. David Freeman, a member of the White House energy staff, when Freeman was a special energy and resources consultant to the Senate Commerce Committee. "It wasn't a discussion with Dave wearing his Carter Administration jacket, but it was the same guy," Rovner said.

The governors also worked with the Federal Energy Administration (FEA) in developing the weatherization program, Rovner said. Other conservation programs were familiar to John F. O'Leary, Carter's appointee to head the FEA, when O'Leary was director of New Mexico's Energy Resources Board.

The White House has consulted with the Governors' Conference "when new things are being done," Rovner said. "I talked with Freeman a couple of times when the natural gas bill was in its genesis and launching because we had never talked about it."

It's still too early to tell how the Carter energy proposals will be administered, but Rovner is hopeful that there will be a large measure of discretion at the state and local levels. Earlier versions of the weatherization and loan guarantee programs set general guidelines, but left the particulars up to the states, he said.

Many of these decisions won't be known, Rovner said, until the programs are sent to federal agencies for implementation.

"If the agency tries to decide that on weatherization, you can put storm doors on the windward side of the house and you can only repair a hole in the roof that's less than one foot by three feet . . . they're just going to frustrate the whole program," Rovner said.

"But if on the other hand, they say these are the general guidelines that we're looking for—that it's got to be cost effective, that there's got to be a payback within three to five years, that it's got to be within certain parameters and the average spent per house should not be over $200 with an outside limit of $350, then you've left some flexibility, which is what we in the (Governors') Conference were in the process of arguing out with FEA at one point."

"I think (the Carter Administration is) more likely to say, 'There will be misfires, but the misfires will be much smaller in proportion to the kind of ingenuity and serendipity we get by allowing people to tailor programs,' " Rovner concluded.

Conservation advocates are still waiting to see whether the Carter Administration will develop "one-stop shopping" for state and local energy conservation assistance. A single, focused federal program is necessary, the advocates say, to speed up energy planning.

ALLIANCE

Faith in grass-roots energy conservation has created an alliance among local officials concerned about energy supplies, advocates of local control over energy and opponents of nuclear development. Carter's plans would appear to begin to satisfy the goals of all three.

These elements are linked nationally by the Center for Science in the Public Interest, which serves as a clearinghouse for local citizen groups.

Founded six years ago by three scientists who had worked for Ralph Nader, the center opposes "centralized energy siting" because that decreases the extent to which local groups can be involved in energy planning. The center also officially opposes development of nuclear energy, but as a matter of policy encourages alternative sources of energy rather than hassling nuclear proponents.

The center stresses the use of "fairly simple, rather than complex" forms of energy, "much like the difference between driving a bicycle rather than a car," Alan Okagaki, co-director of the center's Local Energy Action Program, said in an interview.

Local control—and administration of energy programs—are high on the center's list of priorities, Okagaki said, because energy sources should be developed "within the constraints of your environment rather than trying to conquer it." That's why wood should be a major source of energy in the Northeast and solar could play a larger role in the Southwest, he added.

"There are sources of energy people don't think about besides oil and natural gas. People can make use of a resource that no one thought of as a resource before. We're asking people to be a little more clever," Okagaki said.

Environmentalist Barry Commoner, in a keynote address at the National League of Cities' annual meeting in Denver in December, said that "the key to the (cities') unemployment and inflation problems is a new energy policy." The basis for that policy, Commoner said, lies not in the development of nuclear plants, but in insulation and solar energy.

Cities are particularly vulnerable to rising prices of non-renewable resouces such as petroleum, natural gas, coal and uranium, Commoner told the city officials. "An investment that reduces the use of these sources becomes a uniquely cost-effective hedge against inflation."

Commoner pointed out that "nationwide, 24 per cent of all homes now use electric water heaters, which consume 16 per cent of all residential electricity, second in demand only to refrigeration." Based on a study in St. Louis, Commoner said, half of the hot water needs of the homes could be provided by solar energy at a total cost of about $10.5 billion.

"This investment could save about 30 billion kilowatt-hours of electricity worth about $1 billion (at three cents per kilowatt-hour) annually. This energy saving would eliminate the need for about seven million kilowatt nuclear power plants, costing about $1.3 billion each. So as a rough estimate, the nation could produce the same amount of hot water by investing $10 billion in solar collectors or in nuclear power plants," Commoner said.

"But the solar collectors are likely to be much more reliable and certainly much less risky than the nuclear power plants," Commoner concluded.

Even now, Santa Clara, Calif., and Ocala, Fla., are buying solar water heaters and leasing them to homeowners.

CURRENT EFFORTS

State and local leaders are proud of the efforts they have made so far, with little or no federal assistance.

When Seattle's public power company was asked to invest with other utilities in two new nuclear plants on the Columbia River, the city council undertook a year-long study and decided not to participate because the plants' costs were escalating rapidly. The city decided instead to invest in insulation and other energy-saving measures and by doing so, expects to save 160 megawatts by 1990.

A special Seattle energy office now reviews city codes to encourage conservation, develops strategies to cope with shortages and works to get businesses and homeowners to think of conservation. Solar and wind energy alternatives are being studied. This kind of intense city effort to deal with its own energy problems, Phyllis Lamphere said, "will become the pattern, not the exception."

Recognizing that kind of need, the Vermont General Assembly last year enabled towns to appoint energy coordinators. Thirty coordinators are already at work, examining insulation standards; exploring ways to exploit wood, water, wind, solar and organic energy sources; advising homeowners on purchasing solar units, woodstoves and windmills; and investigating whether local sanitary landfills are suitable for methane gas production.

Energy conservation proponents suggest a number of ways to carry the program further at the state and local level.

Commoner has proposed to the League of Cities that a lending agency be established to provide the financing to link the local customers' needs for energy-saving insulation and solar installations with local businesses that want to provide these goods. "What is called for is not some new federal bureaucracy, but rather, in each city or metropolitan region, a kind of urban energy bank, matched in size to the area that it serves and supplied with funds raised either in the bond market or provided federally or both," Commoner said.

Norman King, city manager of Claremont, Calif., said that the basic technology underlying conservation exists, but that cities don't know how to transfer such information into land development policies, codes and practices. King has suggested to the Energy Research and Development Administration several research projects, including:

Peak load electrical pricing—this system would charge consumers more for electricity during periods of heavy use. But technological questions relating to metering, consumer feedback and cost allocation remain. (For background on the proposals, see Vol. 8, No. 42, p. 1474.)

Protection for the poor—some policies designed to reduce consumption, such as higher gasoline taxes, are opposed by certain groups because further increases would hurt the poor. The federal government, King said, should try to find out how the poor would be protected without encouraging over-consumption.

User fees—proposals have been made for user fees on certain highways to reduce the use of the private car. But no way has been found to efficiently and conveniently impose the fee.

Just about everyone agrees that cumulatively, local self-start energy conservation measures could contribute immensely to relieving national energy shortages and holding down the cost of energy.

But the bottom line for state and local

leaders is how to make energy conservation popular in their communities.

"The American people are funny. You have to hit them over the head. We have a very practiced head-in-the-sand attitude," Lamphere said.

"But with strong presidential leadership, you create a climate in which state and local leaders can also exert leadership, even take some risks. If energy is looked on as a national resource . . . and distributed according to certain priorities, then everyone will begin to get the message," Lamphere said.

CARTER'S ENERGY CONSERVATION BUDGET

This table shows the revisions President Carter has proposed in the fiscal 1977 and 1978 budgets to provide more funds for local energy conservation. The figures show Carter's program priorities in 1978, but the numbers for 1977 can be misleading because certain existing programs will continue without specific requests from the new Administration. The revisions were proposed in the appropriations for the Energy Policy and Conservation Act (89 Stat 871) and the Energy Conservation and Production Act (90 Stat 1125). Figures are in millions of dollars.

[In millions]

	Fiscal 1977		Fiscal 1978	
	Ford	Carter	Ford	Carter
State energy conservation programs (EPCA)	$50	[1] 0	$50	$50
Supplemental program (ECPA)	0	$12.2	0	24
Weatherization (ECPA)	55	55	55	65
Conservation and renewable resources loan guarantees (ECPA)	0.9	1.8	20.0	20.0
Building conservation performance standards (ECPA)	1.2	[2] 0	5	12.5
Utility consumer services offices (ECPA)	0	2.0	0	2.0
Energy extension service	0	[3] 0	8.0	8.0

[1] Congress already has appropriated $25 million for this program.

[2] Carter did not ask Congress for increased funding for this program, but directed the Department of Housing and Urban Development and the Energy Research and Development Administration to reallocate enough existing research and development funds to bring the fiscal 1977 total to $5 million.

[3] Congress has already appropriated $7.5 million for this program.

CUBA—ISLAND OF TERROR

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. McDONALD. Mr. Speaker, the clamor in the popular press to normalize relations with Cuba appears to be growing. There is no shortage of articles lauding Cuba, but a paucity of concrete reasons as to what the United States would really gain by this action. The folly of thinking that Castro has changed his long-range goals could really lead to disaster. The dangers, in fact, appear to greatly outweigh any naive hope for benefits. Castro has thousands of political prisoners in his jails and some have been there for more than a decade. America's Future, a fortnightly review of news, books, and public affairs, in its February 11, 1977, issue published an intelligent commentary on this matter, which I should like to call to the attention of my colleagues at this time.

[From America's Future, Feb. 17, 1977]

CUBA—ISLAND OF TERROR

The word in Washington is that the new Administration will soon be seeking to "normalize" relations with communist Cuba. The first step will be to ease and then lift the 15-year embargo on trade with Havana. This, presumably, will induce Fidel Castro to enter into talks leading to the establishment of full-scale diplomatic relations. Any such development would be hailed by the communist world as another major triumph over "imperialism," meaning the United States. It would be, in fact, tacit admission by Washington that its efforts to isolate and contain communism in the western hemisphere have failed.

It would also mark the formal scrapping of the Monroe Doctrine by which the United States for more than a century has prevented the intrusion of foreign powers into this hemisphere. For nothing can disguise the fact that Cuba is a satellite of the Soviet Union. More than 15,000 Cuban troops, mercenaries of Moscow, remain in Angola, 6,000 miles away, propping up a pro-Soviet communist regime imposed by force of arms after the bloody defeat of Angola's anti-communist majority. Several thousand Soviet military "advisers" and "technicians" have turned Cuba itself into a vast training ground for revolutionaries from throughout Latin America and other areas of the world. Only last month, the Soviet Union signed a $700 million, 20-year arms pact with Peru by which that strategic South American country will become a major new Soviet-allied beachhead on the South American continent. As with other such deals, Cuba will serve as the go-between.

Détente between Havana and Washington would have Moscow's fullest blessings. It costs the Soviets some $2 million a day to keep Castro going. Lifting of the U.S. trade embargo would ease this Soviet financial burden. And, who knows, judging by past history, it might lead to massive infusions of U.S. aid—once Washington forgives and forgets the $2 billion worth of American property confiscated by Castro after his takeover.

In their eagerness to re-establish relations with Fidel, American liberals argue that it's time to forget the old "cold war" days and to develop a new and more "progressive" U.S. foreign policy. It is an argument that ignores Cuba's transformation into a powerful Soviet military base only 90 miles from American shores. Russian missile-firing nuclear submarines now openly use newly-enlarged, Soviet constructed naval ports on Cuba's southern coast in scornful defiance of private agreements with Washington not to do so.

The cozy-up-to-Castro line also ignores the fact that Cuba today is one of the most monstrously repressive tyrannies on the face of the earth, totally dedicated to subverting and overthrowing free societies wherever possible, including that of the United States.

GREEK INDEPENDENCE DAY

HON. BARBARA A. MIKULSKI

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Ms. MIKULSKI. Mr. Speaker, it is a great privilege to address you on the eve of the 156th anniversary of the Greek War for independence. On March 25, 1821, Alexander Ypsilanti and his small force began their long and valiant struggle to free Greece from the tyranny of the Ottoman Empire.

The long war for independence stirred the imagination of Europe and America. Hope for the rebirth of democracy in the land where it was first practiced prompted the famous English poet, Lord Byron to write the following verse:

The mountains look on Marathon—
And Marathon looks on the sea;
And musing there an hour alone,
I dreamed that Greece might still be free:

After many long and tiring years of brutal fighting Greece was blessed with peace and freedom. Just as I am proud to speak of their valiant efforts to secure liberty in their native land, I am happy to bring forth the role of the Greeks in our own Nation.

In recent years America has noticed the ascent of the Greek-Americans as a precious part of the American mosaic. From the time of New Smyrna—first Greek settlement in North America—to the present, hundreds of thousands of Greeks have come to this country. They and their descendants, through hard work and great sacrifice, have become wonderful citizens and made a tremendous contribution to a better way of life for all Americans.

The Greeks progressed from working in the factories and mines to owning their own businesses and shops. The sons and daughters of these first Greek immigrants have become pillars of the American Nation. Names such as Cassevetes, Venetoulis, and Papanicolaou enrich our national heritage.

Recently both Greeks and Americans have been saddened by the appalling invasion of the beloved Island of Cyprus. Cyprus has fallen victim to Turkish aggression. I pray that these darkest hours of Cypriot history will soon pass. It is my sincerest wish that Cyprus will soon return to the peace, prosperity, and progress that once guided her.

I can reflect with pride and satisfaction on what Greece and Greek-Americans have given to America. The achievements of these people not only perpetuate the glory that was Greece, but their patriotism and pride in America will also perpetuate the glory that is

America, a land in which the noblest ideals of democracy live and flourish for the hope and for the future of all peoples of the world.

TESTIMONY OF HON. ANDY JACOBS, JR., BEFORE SUBCOMMITTEE ON HEALTH AND THE ENVIRONMENT

HON. ANDREW JACOBS, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. JACOBS. Mr. Speaker, the following is testimony given by the Representative from the 11th District of Indiana regarding a certain silly decision:

TESTIMONY OF HON. ANDY JACOBS, JR., SUBCOMMITTEE ON HEALTH AND THE ENVIRONMENT, MARCH 21, 1977

Mr. Chairman, I am among those Americans who are grateful to Dr. Frances O. Kelsey for having the courage to trust herself when all men and women doubted her judgment against thalidomide.

That substance, however, did not involve common knowledge.

There is a point where common knowledge and common sense take precedence over the esoteric calculations of the "best and the brightest".

For example, aerodynamics tell us a bumble bee cannot fly. Our eyes tell us otherwise.

The Canadian rat flap tells us some rats have come down with bladder cancer after consuming saccharin in an amount equivalent to a human consumption of 800 diet drinks a day.

Common sense and human consumption of saccharin in somewhat lesser dosages, for 80 years, tell us in Congress to ban the ban.

H.R. 4943 would ban the ban and, as is the case with cigarettes which *have* been proved dangerous to human health, the bill would require a scientifically accurate warning about saccharin which *has not* been proved dangerous to human health.

It is the job of government not only to protect the public's health, but also to protect the public's freedom when it is threatened by mindless application of rigid rules.

And to allow the ban to stand would be to bang down one more nail on freedom's coffin—and quite likely a few on regular coffins, too.

For, in terms of body weight, without the freedom to choose saccharin, many people would be left only with the freedom to be fat, and to suffer heart attacks or diabetic deterioration.

When the farmer sued the railroad for flooding his farm, the country lawyer summed up to the jury by addressing the bright young railroad attorney: "Sir, I congratulate you on a brilliant presentation. You have proved with sophisticated scientific evidence that your client's elevated right of way could not possibly have flooded the farm of these good people. I just have one question. Have you ever been down on that farm when it was raining?"

Mr. Chairman, no doubt your record will be filled with a welter of scientific argument against the freedom of American citizens to choose saccharin. I urge the Committee and the Congress and the President to take such argument with a grain of common sense salt.

Perhaps we could cut a deal with the Canadian rats (you might even call it a rat pact): they don't eat our saccharin: we don't eat their de-con.

HOUSING COSTS—A MAJOR CHALLENGE

HON. JAMES J. BLANCHARD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. BLANCHARD. Mr. Speaker, the essence of one of the principal problems which confronts us here in Congress was captured recently by a newspaper editor in my congressional district, Grant Howell of the Daily Tribune in Royal Oak.

Sharply rising housing costs, spurred by growing scarcity of raw materials, are swiftly reaching the point where millions of Americans are being priced out of the single-family home market. In the process, as this writer points out, they are losing sight of the American dream.

I commend his thoughts to my colleagues, in hopes of encouraging their continued awareness of the very difficult choices which face us today and in the future in the housing field. The article follows:

[From the Royal Oak (Mich.) Daily Tribune, Mar. 11, 1977]

HOUSING BEING PRICED OUT

Lot after lot, long given over to an annual crop of weeds, sprouted homes. The pound of hammers and twang of saws assaulted the quiet of the neighborhoods.

It was one of the greatest boons in history. We hardly knew it. Vaguely, around 1950 or so it became apparent that more were living better than we of the Depression Era had ever dared hope. But as prosperity grew and spread, it was all taken for granted, just as is the increasing vigor and agility of adulthood, until it all begins to fade.

The fading time, perhaps, came in '73 or so when the recession, oil embargo, shortages and inflation impacted. The dire Club of Rome predictions about population growth meaning less for more set off a spate of gloom. But the American Experience—opening and settling a continent—creates a cultural inheritance of optimism for nearly all of us. We shall overcome.

Can we? In the style to which we've become accustomed? Last weeks report on "The Nation's Housing, 1975 to 1985" prepared by the Joint Center for Urban Studies of M.I.T. and Harvard is sobering:

In brief, one fourth of U.S. families could afford to buy a median-priced home as of 1975, half those who could afford a similar purchase five years earlier—in 1970. At present trends the average selling price for a typical home could reach $78,000 by the early 1980s. "Since 1970, sales prices of new and existing homes housing and the costs of home ownership (fuel, repairs and other operating costs) have all outpaced the growth in income."

Whatever will happen to the ideal of owning a home of one's own that has been a "cornerstone of national housing policy since the 1930s"?

Having recently visited two areas of highest housing costs in the nation—Washington, D.C., and Southern California—I wonder too. In each, home prices are an endless topic of conversation. One of the reasons advanced for that $13,000 raise for Congressmen is the far higher housing costs of Washington and its environs. For those who already own, such inflation is a mixed blessing—it has been increasing their equities at a far faster clip than the relative pittance left for mortgage reduction, from monthly payments after taxes and interest on hefty mortgages.

But inflation also outdistances the ability of those just starting out to get into the housing market in the first place, even those with reasonably decent, steady incomes.

That's a difference in magnitude. When we first started dreaming seriously of our own home, there was about a $500 gap between what we wanted and what we could "afford"—i.e. borrow. This was in the early days of the FHA when a $5,000 transaction would buy a brand new, four and one-half to five room bungalow in Royal Oak or Berkeley.

After the Second war, the gap widened a thousand, then several. I suppose we would be "looking" still had not an older, experienced friend introduced us to Leo Charlebois of Ferndale, a master carpenter. With Leo none of Mr. Blanding's dream house nightmares. He made a deal and his coterie of subcontractors respected it. A load of common brick, all we could afford, went back as too common despite a shortage; lumber came from an old and highly respected yard, and was inspected before use. Leo, himself, did the finish; nailed and glued, it has endured a quarter century, every mortise remains joined.

We thought we faced a lifetime of debt, and we worried about "extras." Leo's final bill was less than $200 over the agreed on price among other things that bought a solid, side drive of cement and a new sidewalk to boot. That debt, at 4 per cent, is just about what one puts down now.

Our experience with Leo was the end of an era. It soon became impossible for those in modest circumstances to build their own home. Building became a matter of mass development, rationalizing costs over many units. Mass production and marketing replaced one-on-one relationships, and now even that seems unable to keep costs within reach of the majority.

We were lucky. It may be that some future owner will find a home as well in the house that Leo built. Just as it may be that the Arabs with their oil pricing have done more to save cities than all our housing debt manipulation and subsidy programs to date by making conservation and real rehabilitation of older neighborhoods economic necessity.

South Oakland has rather precisely mirrored for a generation what's gone on in housing and for who. (One fourth the nations' families still are living in "housing deprivation" according to the report. In 1933, Mr. Roosevelt said one-third was ill-housed.) Else so much of value, newly created, will be diminished, and part of the American Experience mocked as empty.

—GRANT HOWELL.

A TRIBUTE TO ROBERT KLEPPERICH

HON. BRUCE F. VENTO

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. VENTO. Mr. Speaker, I note that today my colleague, Mr. FRENZEL, has informed this body of the very fine work that the Close Up program has done in our State. I, too, echo his words in support of this program. Although I am new to this Congress, I have served for 6 years as a State legislator, and have had the opportunity to watch the enthusiasm and interest in our political process that has been generated by Close Up when our Minnesota participants return home.

I am especially proud that the leadership for this program in Minneosta has

come largely through the efforts of one of my constituents—Mr. Robert Klepperich. In addition to his teaching duties at Monroe High School, Bob Klepperich has given much of his time to numerous activities which have been of great benefit to his students at Monroe, and to all of us in the St. Paul community. In his activities on the citywide journalism committee, the Minnesota High School Press Association, and as a lector in his parish, he has always exemplified the value of concerned citizenship. The results of his efforts on the Close Up program are obvious to all of us who have been involved in Minnesota, and are exemplary of his involvement and leadership in our community.

CANADIAN HARP SEAL HUNT

HON. LES AuCOIN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. AuCOIN. Mr. Speaker, yesterday, by a vote of 396 to 1, the House of Representatives expressed its outrage over the senseless slaughter of newborn harp seals which is presently taking place in the waters of Canada.

These animals, guilty only of bearing an incredibly soft white fur, are being clubbed, killed, and skinned on the spot so that a few unthinking, uncaring individuals can adorn themselves in coats made of harp seal fur.

The reaction of the American public to this cavalier disregard for life has been a mixture of disbelief and disgust. For a people conditioned to believing that animals share equally in this earth, the officially sanctioned massacre up north is unthinkable.

Moreover, the implications of this hunt for the future of the species are frightening. At one time there were some 10 million harp seals in Canada; today there are fewer than 1 million. If 90 percent of this year's pups are taken, as predicted, the day is not far off when the species will be virtually extinct.

That this House has raised its voice in protest is only right in view of its own past commitment to the preservation of nature's wildlife. As a member of the Merchant Marine and Fisheries Committee I am proud of our committee's work on the Marine Mammal Protection Act—which prohibits the importation of harp seal skins—the Endangered Species Act, and—more recently—the Fisheries Conservation and Management Act. These are comprehensive efforts aimed at conserving the wildlife which contribute so vitally to the health and enhancement of our environment and our lives.

We would be hyprocrites to the core if we proclaimed these measures only to condone by our silence the systematic effort to destroy the harp seals of Canada.

For this reason I want to state clearly and firmly my hope that the government of Canada will move swiftly to stop the annual harp seal hunt.

A CALL FOR NATIONAL ACTION

HON. THEODORE S. WEISS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. WEISS. Mr. Speaker, Rev. Msgr. James J. Murray, executive director of the Catholic Charities of the Archdiocese of New York, made an important presentation in Washington last month on the New York City fiscal crisis.

His position that New York City's dilemma is symptomatic of a national urban crisis, is one that I believe is well taken and one with which I concur. I would like to share his statement with my colleagues as one that I believe we should keep in mind as we legislate programs that will have a direct impact on the urban scene.

The full statement follows:

A CALL FOR NATIONAL ACTION

(By Rev. Msgr. James J. Murray)

1. INTRODUCTION

The fiscal problems of New York City has been looked on by so many across the country—and even in New York State and parts of New York City—as a unique problem isolated to the City government itself.

Because we are the biggest and perhaps the most vulnerable, the primary attention of the media has been focused on the city and its fiscal problems, not on the human dimension.

Our points are three:

(1) that there is not a New York City crisis but rather a national urban crisis;

(2) that this national urban crisis is a fiscal one but affects the human lives of millions of American citizens and their families;

(3) that the root causes are national in scope, are beyond the ability of local governments to eradicate and call for federal action.

Before I address our first point let me say parenthetically that when I refer to an urban crisis, I am not just referring to cities with a population of over 200,000. I am also including local units of government particularly at the county level across the country. Just a brief example—Westchester County and Suffolk County, because of continued unemployment, have greatly increased their public assistance and medicaid costs. Breadwinners have exhausted Unemployment Insurance benefits; the jobs aren't there; their resources are depleted and they have to go on home relief. Taxpayers have become service and revenue recipients. And the counties don't have the wherewithal to solve this problem.

2. THE CRITICAL SITUATION NATIONALLY

Which cities are in trouble? A year ago last November your Joint Economic Committee, in a report, noted the appearance of danger signals for 22 of the largest central Cities in the United States.

A recent study for the National Urban Policy Roundtable listed 8 cities as being on the critical list; New York, Buffalo, Detroit, Newark, St. Louis, Boston, Cleveland, Philadelphia, with 10 others listed in serious condition.

A study recently released by Brookings would indicate that 29 cities are in a hardship situation from which they can't bounce back.

In simple terms, New York is like the child in the family who is always the first to get sick. When that child gets sick the parents know that it's not going to be over until all the children go through the sickness.

Many of these cities suffer from the same root causes—a long term socioeconomic decline. Their revenue bases are stagnant or declining because of the exodus of people and businesses at the very time that their expenses are going up because of inflation, recession, unemployment and a great increase in a service-dependent population.

Twelve of these sick cities have local tax bases that declined between 1970 and 1975. Five of these cities have a higher percentage of their population receiving welfare payments than New York has.

In short for all of them as a class, their economy is going nowhere, their tax payers are going elsewhere and their tax beneficiaries are left behind. They are finding it increasingly difficult to balance their budgets and more and more difficult to have access to the short-term money market at reasonable interest rates. Already this means, in more than 10 of the cities, that they have to commit more than 10% of their revenues to debt service for short-term borrowings.

At the same time that their tax base is being committed more to debt service and less to human services, their populations and their local economies are declining.

Seventy-three percent of cities with populations over 200,000 lost population in the 70's. And central cities lost population 4 times as fast between 1970 and 1975 as they did between 1960 and 1970. Four cities—Buffalo, Cleveland, Pittsburgh and St. Louis lost more than 20% of their population between 1960 and 1973.

The number of jobs in troubled cities has been going down. As bad as New York's economy is, eleven cities have lost a higher percentage of jobs. Detroit's job loss is 18.8% and Buffalo's is 15.8%.

If employment and jobs in New York City—whose job level has now declined to the level of 1950—had grown at the national rate we would now have 4.43 million jobs in New York City instead of 3.4 million.

3. NATIONAL PROBLEM—NATIONAL RESPONSE?

Gentlemen, these are not short-term problems. The sickness is there for many cities—and it's spreading fast.

Home remedies won't help. No sick city can control the national problems of housing, unemployment, inflation, recession. No sick city can control the municipal credit market. No sick city has the resources for the type of massive economic development programs that are necessary to close the gap between local expenditures and local revenues while continuing to maintain the quality of life of their families and individuals.

Which really is our third and final point—we are not just seeking federal action for New York City. Because we see a problem national in scope we are here to advocate federal initiatives not just for New York but as part of a national strategy to save our cities and the millions of people who live and work and raise their families in them—as well as for all the people—the aged, the poor and the handicapped—who need their cities, who can't afford to move away and who are entitled to have us maintain the quality of their lives.

Because we are so heavily into this issue affecting the central cities we would also appreciate your advice on how we can help to work on this not just for New York but for all other cities and local units of government which need help fast.

February 7, 1977

COST-OF-LIVING RAISE

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. DERWINSKI. Mr. Speaker, a Chicago Tribute editorial, appearing in the

March 17 edition, sums up my views on the cost-of-living raise. I urge the Members to rally behind my bill to terminate the cost-of-living clause. I insert the editorial for the Members' attention:

THE SENATORS PASS UP A RAISE

United States senators, whose paychecks were fattened by 29 per cent as of Feb. 20, have decided they shouldn't help themselves to a $3,000 cost-of-living raise on top of that. By a 93-to-1 vote Tuesday, they approved and sent to the House a bill barring those who got the earlier raise from taking the second one, which would have gone into effect in October. [For the record, the "nay" vote came from Sen. Mike Gravel, Democrat of Alaska.]

Taxpyaers will welcome this gesture, as far as it goes. After someone has relieved you of your paycheck, you appreciate it if he doesn't demand a tip. But the Senate's tactfulness does not end the built-in abuses of this system.

Congress has arranged for a remarkable cozy system for itself. It does not have to vote pay raises for its members; the raises just happen unless the members take action to stop them. For example, the initial raise—from $44,600 a year to $57,500—came about under a 10-year-old law under which a private commission periodically recommends raises for Congress, the Vice President, federal judges, and other high government officials. The recommendation takes effect after 30 days, during which Congress intently looks somewhere else.

That arrangement at least keeps Congress from setting its own salary levels. From the public's standpoint, however, the cost-of-living "escalator" raises have nothing at all to recommend them. They serve only to insulate our lawmakers from the effects of inflation and keep them from having a personal stake in the nation's economic problems. In effect, the system makes members of Congress a privileged class who pay no penalty for their mistakes; if Congress' spending policies worsen the inflationary pinch on the rest of us—well, that's our problem.

The Senate's decision to deny itself an extra helping this time around may be welcome, but it is not satisfactory. The answer is not to put off cost-of-living raises to a more appropriate time. It is to abolish them.

WHO IS CONDUCTING THE CARTER ORCHESTRA?

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. MICHEL. Mr. Speaker, today's Washington Post carried a front page story headlined: "Califano Hires $12,763 Chef to Cook His Meals at HEW." The chef's title is "Personal Assistant to the Secretary (Special Activities)" and his job description is 402 words long. All of this is occurring in an administration pledged to frugality, to cutting back, to eliminating unnecessary Government expenditures and also to the simplification of language in Government official forms. Why it should take 402 words to describe a cook puzzles me.

As Secretary of Health, Education, and Welfare, Mr. Califano seems to go his own way in other areas as well. He recently stated he is in favor of the quota system and reverse discrimination. President Carter, when asked his opinion of reverse discrimination, said: "I don't like that concept."

Once more we have an example of Carter conducting one tune while his chief appointees play another. Just who is conducting the Carter administration orchestra? And what tune is it supposed to be playing?

May I add, finally, Mr. Speaker, that the Post story did not state where Mr. Califano obtained his cook through the quota system. I suspect not, because when it comes to the palate of the Secretary of Health, Education, and Welfare I am sure only merit counts.

THE ARMS DEBATE

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. HAMILTON. Mr. Speaker, I would like to insert my Washington Report for March 23, 1977, into the CONGRESSIONAL RECORD:

THE ARMS DEBATE

An arms debate is reverberating through Washington.

The two sides are starkly drawn. The hawks say that the Russians are coming and that we must build new and more powerful weapons to scare them away. The doves say that there is no reason to panic because the Russians are prepared to cooperate in arms reduction.

Contending groups have been formed, issue papers written, advocates have taken to the lecture platform and the Congressional hearings rooms, and newspaper columnists are hurling charges and countercharges. The initial skirmish has resulted from President Carter's nomination of Paul Warnke to be the chief arms negotiator, but the basic problem is far broader than a single nomination. Its many facets will emerge in the coming months.

The importance of the debate over the strategic balance of power can scarcely be overstated. It involves not only huge outlays of money, but also the security of the nation. If it is not decided correctly we could all be killed. The key question is whether the United States and the Soviet Union will continue to try to best one another in various kinds of armaments, or whether they will break the established pattern and find ways to limit arms.

Many factors have brought this debate about. Among those factors are a serious and obvious Soviet buildup of forces, grave tensions in the world (especially in the Middle East and Southern Africa), last year's Presidential campaign in which arms control figured prominently, and the unemployment levels at home which make attractive some arms programs like the B–1 Bomber.

The debate over arms policy begins with what the defense analysts call mutually assured destruction, the doctrine that neither side can win no matter who attacks first. Belief in this doctrine has allegedly kept both sides from shooting first. However, the hawks claim that the Soviets are now moving beyond mutually assured destruction and are seeking the capability to win a war by evacuation schemes, civil defense efforts and massive new destructive power. The doves reject this claim and argue that the notion of superiority no longer has any meaningful application at a time when each adversary can destroy the other. The hawks think that the Russians are malign; the doves think that they are benign. Both approaches are probably flawed and the trick is to get the proper perspective.

A favorite bone of contention between the hawks and doves is the size of strategic arsenals, though no one wins the dispute because there are enough numbers to satisfy everyone and prove any point. The hawks emphasize the Soviet lead in sheer tonnage of nuclear bombs; the doves counter by citing the American lead in numbers of warheads and accuracy of delivery systems. The numbers do show that both sides have far more power than they need to inflict unacceptable damage on the other side even after absorbing a first strike. In the final analysis there are too many imponderables, too many intangibles and too many uncertainties to answer the question once and for all.

One of the problems with this debate is the average citizen's relation to it. He finds himself caught between the cliches of the politicians and the jargon of the experts with no way to find a clear view. But the strategic balance of power is too important to be left to the politicians and the experts. The average citizen must try to understand the debate and maintain control of the nation's direction.

Americans need some appreciation of the Soviet viewpoint. In the last five years the United States has more than doubled its ready-to-fire arsenal of nuclear warheads. In the same period technology has made our weapons vastly more accurate, lethal and defensible and has provided our conventional forces with impressive new weapons, including (in the European theater) 2,000 new tanks that are the best in the world. The Soviets also note that we have been willing to undertake military adventures in remote areas like the Dominican Republic, Lebanon, Korea and Vietnam. They worry, too, about authoritative reports that the United States is testing new weapons which are not publicly discussed. One such weapon, the cruise missile, has them extremely upset.

Despite the real hostility between the U.S. and the Soviet Union, both sides must be able to put aside their suspicions and concentrate on their mutual self-interest in avoiding a nuclear conflict. Neither the Soviets nor the Americans want to have their population, cities and industries incinerated. There is always the tendency to seek security and overwhelming armaments and to take no risks for peace. That approach will lead only to more and better weapons. Arms control, like defense policy, however, can be an appropriate way to further national security. It is necessary that the strategic debate be widened beyond the mere count of weapons to a deeper, less passionate and more objective view of ourselevs and our adversary.

(Much of the information in this report was drawn from a series of articles in the Washington Post.)

UNITED AUTO WORKERS URGE HOUSE TO SUPPORT DINGELL-BROYHILL, H.R. 4444

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. DINGELL. Mr. Speaker, I insert in the RECORD today the letter of March 18 from the United Auto Workers to Members of the House of Representatives re-

garding that union's full support of H.R. 4444, the Mobile Source Emission Control Amendments of 1977, to amend the Clean Air Act of 1970.

Representative JAMES BROYHILL of North Carolina and I are pleased, along with several other House Members, to be the cosponsors of H.R. 4444, and identical bills.

The UAW letter, signed by Mr. Howard G. Paster, legislative director, clearly sets forth the reasons calling for enactment of the automobile emission control schedule contained in H.R. 4444 and the companion Senate bill, S. 919, as introduced by Senators DON RIEGLE and ROBERT GRIFFIN of Michigan.

The UAW letter to House Members follows:

MARCH 18, 1977.

DEAR REPRESENTATIVE: The United Auto Workers urges you to cosponsor and to support actively H.R. 4444, a mobile source amendment to the Clean Air Act introduced by Representatives Dingell and Broyhill. This legislation embodies specific recommendations made by UAW President Leonard Woodcock on automobile emissions, as well as other sections dealing with related efforts to control pollution from mobile sources.

The auto emission provisions of H.R. 4444 are designed to ensure that the public health is protected and that the principles of the 1970 Clean Air Act are achieved, while taking into due consideration important, related questions of auto fuel efficiency. In this regard, I would remind you that the UAW, in recognition of the severity of the national energy problem, and to achieve the goal of energy conservation, did support the enactment of mandatory mileage standards which take effect in the 1978 model year.

Permit me to set out for you in summary fashion the basis for our recommendations, incorporated in H.R. 4444, on auto emissions:

(A) The emissions standards now in effect for the 1977 model year would remain in effect for the 1978 and 1979 model years because of the long lead time associated with auto production, certification to Federal standards for emissions and mileage, and conversion to meet new standards. The standards now in effect are: Hydrocarbons (HC), 1.5 grams per mile; Carbon Monoxide (CO), 15 grams per mile; and Oxides of Nitrogen (NO_x), 2 grams per mile. I would note that H.R. 4151, introduced by Representative Rogers, takes the same approach to the 1978 and 1979 model years, and that the House passed a similar provision last year.

(B) Regarding hydrocarbons, the Dingell-Broyhill bill, fully supported by the UAW, proposes to reduce HC emissions to .41 grams per mile in the 1980 model year. This is the original goal of the Clean Air Act and, because of the clear health danger associated with HC emissions which are strongly implicated in smog formation, we oppose any relaxation of the original goal in this regard. The welcome endorsement of this goal by Representatives Dingell and Broyhill and the subsequent coalescing around the UAW position has forced the automobile manufacturers to acknowledge for the first time that this goal—so crucial to the public health—is attainable. Also, this is consistent with Representative Rogers legislation.

(C) Regarding carbon monoxide, H.R. 4444 sets a standard of 9 grams per mile in the 1980 and subsequent model years. This is totally consistent with the need for air quality, although it is slightly higher than the original goal of 3.4 grams per mile. There are four reasons why we have come to the 9 gram standard:

(1) Every city in the country will meet air quality standards for CO by 1990 with the 9 gram standard.

(2) While a 3.4 gram standard will reduce CO contaminants, based on a worst case example from the early 1970's, by 83 percent by 1990, the 9 gram standard will reduce those contaminants by 80 percent, a statistically negligible difference.

(3) The California Air Resources Board has set a 9 gram standard for CO and is unlikely to set a lower standard because of its finding that the standard is appropriate for protecting the public health.

(4) With the foregoing evidence that the 9 gram standard is consistent with the public health it then becomes highly desirable since it will facilitate the movement to smaller, more energy efficient engines which find it far more difficult to meet the 3.4 standard.

(D) Regarding oxides of nitrogen, this is in many respects the most difficult problem because there is less evidence on the health consequences of NO_x standards, yet the strongest correlation between emission standards and mileage goals. H.R. 4444 would keep the present standard of 2 grams per mile through the 1981 model year, while Representative Rogers would keep it through the 1980 model year. Under our proposal the standard would be reduced to 1 gram per mile in the 1982 model year with authority for the EPA Administrator to raise the standard to no higher than 2 grams per mile if it is found to be consistent with public health needs and if the higher standard will permit substantial improvements in auto efficiency or the application of advanced or innovative technology. For example, diesel engines hold great promise for achieving our national goals of energy conservation, yet they cannot now meet 1 gram per mile standard for NO_x. In no event could EPA raise the standard above the 1 gram goal unless it was first shown that an increase would be consistent with public health requirements. The proposal of Congressman Rogers does permit the EPA Administrator to waive the NO_x standard up to 2 grams per mile in 1981 and 1982 and up to 1.5 grams in 1983 and 1984.

We believe that the Dingell-Broyhill legislation fully protects the public health and is totally consistent with the goals of the 1970 Clean Air Act. Moreover, H.R. 4444 is fully consistent with the important goals of energy conservation and automobile efficiency which were not as salient in 1970 as they are today. This legislation constitutes a responsible balance between interrelated and important national objectives and we urge that you give it your careful consideration, support, and cosponsorship.

Finally, it should be noted that H.R. 4444 deals only with mobile source provisions of the Clean Air Act and does not propose to amend nor to strike any provision relating to stationary sources.

Thank you very much.

Sincerely,

HOWARD G. PASTER,
Legislative Director.

THE PRESIDENT—AND CONGRESS—ARE NOT DOING ENOUGH TO AID METRIC CONVERSION

HON. BARRY M. GOLDWATER, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. GOLDWATER. Mr. Speaker, many of our colleagues are concerned that the progress toward an orderly and comprehensive conversion to the metric system has been interrupted or unduly delayed by inaction by the executive branch of our Government as well as by the Congress.

At the third annual conference of the American National Metric Council, our colleague from Illinois, Congressman ROBERT MCCLORY, reported on the situation regarding metric conversion as it relates to the failure so far to name the members of the metric conversion board—and the lack of impetus in the Congress with respect to the metric conversion program.

Mr. Speaker, while disturbing, I feel that Mr. MCCLORY's remarks are timely and challenging to both the President and to the Members of this House as well as to Members of the other body. Our colleague has introduced a House concurrent resolution (H. Con. Res. 154) which might help us to get off of dead center and begin moving again toward a coordinated metric conversion program in our society. It is to be hoped that the Committee on Science and Technology will schedule a hearing on this measure at an early date.

Meanwhile, Mr. Speaker, I am pleased to attach to these remarks a copy of Mr. MCCLORY's address delivered at the American National Metric Council Conference last Monday at the McCormick Inn in Chicago as follows:

THE PRESIDENT—AND CONGRESS—ARE NOT DOING ENOUGH TO AID METRIC CONVERSION

Conversion to the metric system of weights and measures which has been a hotly debated subject almost since the establishment of our Nation seemed to be headed for a reasonably prompt and harmonious and effective solution following the enactment of The Metric Conversion Act of 1975 which was signed into law on December 23, 1975, by President Ford. This, indeed, seemed to be the end of the road toward our Nation's conversion to the metric system of weights and measures.

Some in this room had been struggling for more than ten years to bring about passage of that legislation representing a national commitment to move inexorably toward the use of metric standards in our industries, our educational institutions and in our everyday lives.

As many of you know, I favored a measure which would have been more persuasive. I wanted a target date—after which metric measurements would be the exclusive or almost exclusive system to be used in our country.

What we passed is a Bill intended to encourage a voluntary changeover to metric standards at some indefinite—undesignated—time in the future.

And—while not extending much power to a 17-member Conversion Board—the Act provided for such a Metric Conversion Board to be named by the President—subject to confirmation by the Senate.

Indeed, the establishment of the Metric Conversion Board is the principal authority contained in the 1975 Act. While the Board is charged with coordinating the promoting programs relating to conversion to the metric system—it has no power to compel anyone to do anything.

Very careful attention was given by President Ford to the credentials of each of the 17 members whom he named. But the Senate had little or no time to confirm the Board Members. Recently, President Carter withdrew the names from further consider-

ation—and he has given no indication as to which—if any—of those originally named will be included in his list.

As the 1975 Act provided, it was intended that both the Board and the departments and agencies of the federal government would reflect the policy of the United States ". . . to coordinate and plan the increasing use of the Metric System in the United States . . ." and ". . . to coordinate the voluntary conversion to the Metric System."

Without the Metric Conversion Board in operation, the coordination and stimulus which the Congress intended from this legislation is lacking. We seem to have experienced a kind of drift—a haphazard kind of action or relative inaction—in government agencies, in our State legislatures, some of our State educational systems—and even in industry.

Let me compliment the American National Metric Council for accomplishing privately what the Congress and the Executive Branch of our government have been unable or unwilling to do—so far.

The five coordinating committees of your organization representing broad economic groups of American business and industry, as well as the 37 sector subcommittees, have succeeded in keeping your members and other interested segments of our society informed and encouraged to move gradually and yet persistently toward metric standards in the areas of motor vehicles, farm equipment, computers, and many types of industrial products. Many industrial firms have already converted to metric measurements or have adopted plans which will result in an early conversion to metric standards.

If you live in the Los Angeles area, you can buy Pepsi Cola in metric-sized bottles. Coca-Cola is running a similar test in the Atlanta area.

The legislatures of 45 or more (possibly all 50) states have taken some steps to direct the schools within their jurisdictions to develop instructional programs which will utilize the metric system and will result in a metric changeover within their school systems. However, there is as yet no uniformity—and this indicates just one urgent need.

A number of states (22 in all, I believe) are revising their highway signs to indicate distances and speed limits in both metric and traditional units of measurement.

Signs on highways and in state parks have provided a fertile field for developing metric conversion programs for various states.

In addition, the National Governors Conference last year under the direction of Governor Robert Ray of Iowa established an Interstate Metric Committee in an effort to coordinate state metric conversion actions. So far, 40 Governors have named representatives to this Committee and there are numerous state activities giving support to metric conversion but without any apparent coordinated program.

It is interesting, for instance, that the State of Pennsylvania operated a pilot program to determine consumer reaction to buying gasoline by the liter. A similar test was conducted in Tallahassee, Florida. In both cases, the consumer reaction was favorable.

Boone, North Carolina, has capitalized on metric by characterizing itself as "the kilometer high city."

About the most ambitious state legislative action was that of the New York State legislature which amended the State's Vehicle and Traffic Laws to require that every new vehicle registered in the State after September 1, 1980, must have metric units on its speedometer.

Turning to the Federal government, I have learned that various executive agencies and departments are promoting interesting but somewhat disconnected programs. Most of these activities are in the Departments of Commerce, Defense, and the Interior, with the Department of Commerce (in which the Bureau of Standards is housed) the most involved in metric conversion programs.

Indeed, the Department of Commerce through its Interagency Committee on Standards Policy has established a Metrication Subcommittee. This group is setting up a mechanism to allow all federal government agencies with similar concerns to meet together to discuss methods and procedures for coordinating their metric activities in their respective fields of interest. I have no report on whether the Subcommittee has yet met or developed any metric conversion programs.

The Department of Defense has established a policy of employing the metric system in all of its activities, consistent with operational, economical, technical, and safety considerations. In addition, the metric system is accorded consideration in the procurement of all supplies and services, particularly in the design of new material.

The Department of the Interior issued an informational press release setting forth the Department's program to convert to the metric system with the assurance that all agencies within the Department are planning to be metric by 1980.

The Federal Highway Administration has formed a metric committee. The Federal Housing Administration has announced a policy of using metric in publications, reports and specifications. And the Department of HEW has funded several metric education projects.

The National Weather Service has developed plans for weather forecasting—but is awaiting enactment of specific legislation before giving effect to an overall conversion to metric units. However, this change might be made possible by Executive Order.

Several other federal government actions which may be of interest are these: The Maritime Administration has developed a program of metric conversion to provide for the orderly transition to metric in all facets of merchant shipping by 1980; both the Forest Service and the National Park Service are adding metric to all of their signs and brochures; and here's one that should not cause too much alarm—the Treasury Department is allowing the wine industry to convert to metric-sized bottles with indications that the changeover will be completed by January 1, 1979. Similar regulations for hard liquor require conversion by 1980.

I only offer this suggestion: If you have disciplined yourself to a quart a day, you'll have to increase your limit or leave a little in the bottle!

I am told that the Patent and Trademark Office is requiring the use of metric units in connection with patent applications.

That's about it—as far as a rough summary of federal government and state government action in fulfilling our Nation's commitment to increase use of the metric system and to coordinate the voluntary program to convert to the metric system. Again, I would say it is badly uncoordinated and seems to provide no assurance as to when or whether there will be an overall adoption of the metric system as our sole or predominant system of weights and measures.

A few days ago there was delivered to me a report entitled, "Realities of Metrication," prepared under the auspices of the International Brotherhood of Electrical Workers. In reporting on the role of the Federal Government with regard to metric conversion, this report charged that, "The status of metric conversion in the Federal Government is totally chaotic, lacking responsible leadership and direction."

My friends, I am not nearly as gloomy about the future of metrication or its current status as the author of this IBEW report. Nor do I agree with the author's penultimate conclusion that ". . . given today's economic conditions and the loss of confidence in Government and big business, the environment for metrication has never been worse and unless extreme caution is taken further deterioration is inevitable." However, there is a clear need for the President and the executive branch of our Government to act promptly and decisively.

Obviously there also must be some further action which may be taken in the Congress—besides encouraging Members of Congress to write to President Carter urging him to act promptly in naming the 17-member Metric Board.

My Senate colleague, Senator Claiborne Pell of Rhode Island, recently proposed a Senate resolution to require that in all legislation and reports of the United States Senate where units of measurement or weights are employed, the material shall include such weights and measurements in metric units. I have offered a similar resolution in the House of Representatives with respect to legislation and other legislative action occurring there.

More recently, it seemed to me that a concurrent resolution of the House and the Senate to reflect continued support for an orderly and coordinated conversion to the metric system would help to bring greater order into the essentially voluntary action which is taking place. Copies of my concurrent resolution together with remarks which accompanied it when presented to the House of Representatives last week are available at this council meeting.

I have talked to members of the House Committee on Science and Technology, including Chairman Olin Teague and Representative Barry Goldwater, Jr., who concur in the view that action on this or a similar concurrent resolution would be very much in order and would support the industrial and educational actions which are taking place on a purely voluntary basis.

Personally, I would like to see a target date established by our Nation as a time for virtual complete conversion to the metric system. In the absence of such a definitive commitment, it seems to me that we must take renewed action in the Congress and at the Federal level from time to time to keep the voluntary metric conversion programs on course and moving persistently and in coordinated fashion along an uninterrupted path toward a single uniform system from which the people of our Nation and of the world can all benefit.

THE SACCHARIN BAN

HON. BARBARA A. MIKULSKI

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Ms. MIKULSKI. Mr. Speaker, Monday I testified before the Health Subcommittee of the Interstate and Foreign Commerce Committee about the proposed ban on saccharin. I would like to insert in the RECORD the remarks I made before that subcommittee:

TESTIMONY OF THE HONORABLE BARBARA A. MIKULSKI

Mr. Chairman, Members of the committee, I commend you for having these hearings. The way my mail and phone calls are running, the proposed ban on saccharin is bigger

and has more opposition than the congressional pay raise.

People are outraged and sceptical. They are angry and disbelieving of the Canadian study that led the Food and Drug Administration to its conclusion. They feel a Canadian study, done on rats fed such large doses is ridiculous. I must agree with them. No one I know is going to, or has ever, consumed 800 cans of diet soda a day. They would die of gas before they would die of cancer.

It is my absolute belief that people will continue to use saccharin. I'm sure others will tell you about the health reasons for the continued use of artificial sweeteners. I will tell you what is going to happen. People will hoard and a black market will develop. This nation has once in its history tried prohibition on a substance that people liked and we know what those results were. We will see "bathtub" saccharin and illegal imports from Mexico and the Caribbean. The American people are ingenious and they will find a way to get it.

I understand the FDA floated a trial balloon suggestion to make saccharin available by prescription. No one knows better than this committee that the cost of health care is sky-rocketing. Forcing people to go to a physician to get a prescription and then to a pharmacy to get it filled would so outrageously add to the cost of health care as to be beyond good sense or fiscal responsibility.

The question still remains, what do we do now and what do we do in the future. I have three recommendations.

1. I believe this subcommittee and the Congress should authorize and appropriate sufficient funds, to enable the Food and Drug Administration to conduct its own study.

Newsweek magazine says that Dr. Phillipe Shubik of the Eppley Institute for Research in Cancer at the University of Nebraska raised questions about the Canadian study. Dr. Shubik, according to the article, noted that the animals were fed a commercial diet that was already contaminated by small amounts of a carcinogen. It is also noted that rats have many bladder ailments other than cancer which may say something about their urinary system in general.

It is my understanding that FDA claims its hands are tied by the language of the Delaney amendment. However, I note that the clause says "appropriate" study must be conducted. I believe there are serious questions about the appropriateness of the Canadian research and the actual language of the Delaney amendment gives the FDA enough room to consider the issue again.

2. My second recommendation is that FDA delay issuing any regulations until such new research is done.

Because saccharin is the last artificial sweeteners remaining on the market, the FDA has an obligation in the very name of public health, to be absolutely certain. The 10 million diabetics, especially the children, the millions with hypertension, heart disease and other cardiovascular diseases plus the countless millions who are overweight need that conclusive reassurance.

3. My third recommendation is that this committee examine the long-term validity of the Delaney amendment.

The state of the art of cancer detection has grown geometrically since 1958 when the Delaney amendment was enacted. I admit to no great knowledge in this field but I believe the questions to be raised should include: what is the quantity consumed? What is the cumulative effect? and what is the effect on humans?

For these reasons I think the health conscious and reasonable approach would be to delay any regulations banning saccharin until new and complete research is done.

MARY TYLER MOORE WILL BE SORELY MISSED

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. BOLAND. Mr. Speaker, it is a rare television show that becomes an American institution. In this decade, however, there has been one show that became more than an institution, it became part of our lives. That show is the Mary Tyler Moore Show. Although the last regular season edition of the Mary Tyler Moore Show has now been aired, we will not forget Mary and her friends and how they brightened our Saturday nights.

Ted Baxter, Lou Grant, Murray Slaughter, Georgette, Phyllis, Rhoda and, of course, Mary Richards seem like real people to so many of us. In many ways they are. The performers on the show, Mary Tyler Moore, Edward Asner, Gavin MacLeod, Ted Knight, Georgia Engel, Valerie Harper, and Cloris Leachman, created characters so close to the types of people we all know that it seems as if WJM–TV must really exist in Minneapolis. This has been the real strength of the Mary Tyler Moore Show. This show found humor and meaning in everyday life and in everyday people. It was a show that taught us so much in such an easy manner. The wit and wisdom of the Mary Tyler Moore Show was felt by people of all ages. I cannot think of a better show that could be enjoyed by all members of a family together.

Mr. Speaker, the sense of loss that we all feel is perhaps the greatest tribute that can be paid to Mary Tyler Moore and her friends. It is as if a good friend had moved away. I would like to congratulate all the cast members of the Mary Tyler Moore Show and wish them the best of luck in all future endeavors. I am sure we will be hearing a lot more from all of them. I am also sure we will have the good fortune of seeing Mary Tyler Moore back on the screen in another excellent show. It is funny, but I cannot help thinking I should wish Mary Richards the best of luck in finding a new job.

Mr. Speaker, at this time I would like to insert an editorial from today's Washington Post that includes some fine comments on the ending of the Mary Tyler Moore Show:

EXIT "MARY TYLER MOORE"

They never were much as a news team—Mary and Lou and Ted and Murray and the assorted hangers-on at WJM–TV. But, come to think of it, there never was much news in "The Mary Tyler Moore Show" version of Minneapolis. What mattered were not large, dramatic public events, but small personal crises and confusions, and the cameraderie of co-workers who happened to be good friends.

It was an unpromising concept for a situation comedy. The situations were so everyday, the comedy so mild. The characters were not hard-driving, stylish or snide. The tone stayed mostly in the temperate zone between gentle satire and general hilarity. The show celebrated quite ordinary things like middle age, the Middle West, modest ambitions and even staying home on Saturday night. All in all, its formula was about as unglamorous—and sometimes as stunning—as a bacon-lettuce-and-tomato sandwich on white toast.

That's why "The Mary Tyler Moore Show" collected such a loyal following, including people who make a point of "not watching television very much." It was extraordinary television, on the whole. Through superb writing and a splendid cast, the show often achieved connections that few programs make. Everybody has seen a Ted Baxter. Everybody knows or would like to know, someone like Mary Richards—incorrigibly optimistic, earnestly independent, solicitous about her friends, frequently less bewildered than bemused. Everybody knows about coping, but few people manage it so cheerfully.

We'll leave to others any portentous comments about the show's significance as a reflection of Our Times. We just want to salute it as first-class entertainment, all the more remarkable because it was sustained for seven seasons and 168 shows. Leo Durocher was wrong: Nice guys don't always finish last.

IMPORTED FOOTWEAR

HON. JOE MOAKLEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. MOAKLEY. Mr. Speaker, as of late, much attention has been focused on the critical state that the domestic shoe manufacturers find themselves in throughout the United States. Unemployment among shoe workers is well over 50 percent higher than the national average. The statistics are simply overwhelming. In a mere 10 years, the number of shoe manufacturing enterprises in this country has dropped from over 1,000 to just 650. Over 75,000 jobs have been lost nationwide.

The principal rationale for this situation is the avalanche of imported shoes now flooding the American market. The International Trade Commission, as we are all well aware, has found that the large numbers of imported footwear have caused grave injury to the nonrubber footwear industry in this country. The decision the President faces on April 8, or thereabouts, on the imposition of a tariff-quota system for shoe imports is of great import in the Northeast as well as throughout the rest of the Nation. The House of Representatives and the Senate of the Commonwealth of Massachusetts have forwarded to me a series of resolutions they unanimously passed which I thought might be of interest to my colleagues in the House:

RESOLUTIONS MEMORIALIZING THE GOVERNOR OF THE COMMONWEALTH AND THE PRESIDENT AND CONGRESS OF THE UNITED STATES TO PROTECT THE DOMESTIC SHOE INDUSTRY

Whereas, On Thursday, March tenth, nineteen hundred and seventy-seven, management and labor representatives from the shoe companies of southeastern Massachusetts will visit the state house and urge Governor Michael S. Dukakis to take an active role in the fight to save the American shoe industry; and

Whereas, Hundreds of shoe workers, employed and unemployed, are concerned that the Commonwealth present a favorable climate in which a thriving and self-sufficient shoe industry can survive; and

Whereas, Of the present three hundred and fifty-six shoe companies in the United States,

nearly one hundred may be out of business if foreign imports continue to erode the United States shoe market, representing a loss of up to one hundred thousand jobs; and

Whereas, An international trade commission has twice recommended that a limit be imposed on footwear imports from foreign countries; and

Whereas, If foreign imports are allowed to dominate the American shoe market, prices of shoes, a necessary purchase for families, may skyrocket and be controlled by foreign monopolies; now therefore, be it

Resolved, That the Massachusetts Senate hereby joins with the shoe workers and industry representatives in urging Governor Michael S. Dukakis to do everything within his power to rejuvenate the shoe industry, and furthermore urges President Carter and the Congress of the United States to take the necessary steps to impose controls on foreign shoe imports; and be it further

Resolved, That copies of these resolutions be transmitted forthwith by the Clerk of the Senate to the Governor, the President, and to the presiding officer of each branch of the Congress of the United States and to each member thereof from the Commonwealth.

RESOLUTIONS URGING THE GOVERNOR, THE PRESIDENT, AND CONGRESS TO AFFIRM THE FINDINGS OF THE INTERNATIONAL TRADE COMMISSION GOVERNING SHOE IMPORTS

Whereas, The International Trade Commission has reported that from fifty thousand to one hundred thousand jobs, and one hundred factories, are placed in direct jeopardy by current footwear imports from foreign countries; and

Whereas, The unstemmed erosion of the United States shoe market by foreign imports gravely threatens footwear concerns which are located in the Commonwealth communities of Whitman and Brockton; and

Whereas, The impartial International Trade Commission has twice recommended that a limit be imposed upon shoe imports from abroad; and

Whereas, The Commonwealth of Massachusetts, by ancient heritage the formidable bastion of the American shoe industry, assumes the mantle of leadership in the fight to preserve a favorable climate in which a thriving and self-sufficient American industry can survive, with consequent benefit to all citizen consumers; therefore be it

Resolved, That the Massachusetts House of Representatives, sensitive to the important position which the shoe industry occupies in the Commonwealth's economic life, unites in common purpose with shoe workers and industry representatives in urging Governor Dukakis, President Carter and the Congress of the United States to affirm, reinforce and implement the findings of the International Trade Commission governing shoe imports; and be it further

Resolved, That copies of these resolutions be transmitted forthwith by the Clerk of the House of Representatives to the Governor, the President, and to the presiding officer of each branch of the Congress of the United States and to each member thereof from the Commonwealth.

ADDRESS OF SENATOR PERCY

HON. EDWARD W. PATTISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 21, 1977

Mr. PATTISON of New York. Mr. Speaker, one of our distinguished colleagues in the Senate, the Honorable CHARLES H. PERCY of Illinois, delivered a speech several weekends ago in Chicago on energy conservation which I now insert into the RECORD.

Senator PERCY has explored two of the most important issues facing our Nation and the world—energy conservation and economic growth—in a most thoughtful and eloquent way, and I believe that we would all benefit from reading his words.

The full text of his speech follows:

ADDRESS BY SENATOR CHARLES H. PERCY

Dick Robbins, Kathy Schuk, Lois McClure, Helen Bieker, James Alter, members of the Board of Directors and distinguished members of the Federation:

It is a pleasure to participate in this meeting. I know the Federation has already launched an energy conservation program and I commend you for your foresight, initiative and ambition.

For years, we seemed to do our best to ignore the need for a national energy policy. Some wondered if the costs and benefits of a comprehensive energy program could be fairly distributed throughout our society; only a handful knew that we were squandering enormous amounts of energy. And many assumed that conservation meant slower economic growth.

Record cold temperatures this winter, which caused fuel shortages, astronomical utility bills and increased unemployment, awakened the whole nation to the urgency of the energy crisis. The Administration, Congress and leaders in every sector of society are at last beginning to realize that we cannot achieve our basic goals as a nation without facing up to the energy problem.

To achieve steady economic growth with full employment and low inflation, our first priority should be energy conservation. Nearly half the energy we consume is wasted . . . produces absolutely nothing. That means we, as a nation, burn the equivalent of 7 million barrels of oil a day, at a cost of nearly $100 million, and receive in return—nothing. The largest and cheapest source of new energy for economic growth is "conservation energy"—the energy "produced" by cutting energy waste.

Last November, at the National Press Club, I called upon the Administration to set a target of zero growth in primary energy consumption over the next decade. I repeat that call today. For the past 25 years, energy demand has been growing at about four per cent a year, close to the same rate as our economy. Economic growth and energy growth do not need to proceed in lockstep.

We do not know just how rapidly this country or this planet may be running out of fossil fuels. But we do know for certain that it is becoming more and more difficult to pay the mounting costs of meeting huge increases in demand for new energy.

Three main questions dominate the debate about energy conservation. How much difference will it make if we launch an all out effort to cut waste and use the energy we have more efficiently? How can we begin this huge task? What advantages can we as a nation and as individuals expect to gain through conservation?

In the decade ending in 1974, demand for new energy led to an investment cost of more than $300 billion. For the decade ending in 1985, the Federal Energy Administration estimates that demand will rise less rapidly, mainly because of higher energy prices. But it is still the conventional wisdom that demand in this period will increase—and by as much as two or three per cent in a year.

This would mean a very large increase in energy consumption from the present level. The investment cost of meeting this demand with new electric power plants and other facilities has been estimated in the range of $650 billion to $1 trillion. That is about half to two-thirds of all the investment capital we are likely to have available in the next decade.

This fact alone should tell us that something is terribly wrong with our plans to meet future energy needs. Putting that much money into producing new energy would mean starving other key sectors of the economy that compete for scarce capital, such as health, education, housing and transportation. And by using up finite energy sources at a breakneck pace, we will exhaust raw materials needed for non-energy uses. This process has been mockingly called "strength through exhaustion."

A well planned conservation program will have as one of its prime goals the creation of more jobs. In almost every sector of our society, using less energy or using it more efficiently means putting people back to work.

Conservation will also help limit the environmental damage that results from oil spills, strip-mining and disposing of large quantities of nuclear waste.

Efforts to increase employment by encouraging energy thrift can also help fight inflation. The more we draw on reserves of nonrenewable fuels, the more difficult it will be to prevent fuel prices from rising. If free market condtions set the prices, the scarcity or inaccessibility of reserves will tend to drive prices up. If producer or distributor cartels set prices, they will often find it in their interest to charge more. Even if the Federal government exercises control over the prices of all the energy consumed, in the national interest the President might decide to raise prices to reflect real energy costs.

Catering to a two to three per cent annual energy demand growth will also increase our dependence on foreign sources. In January, for the first time in our history, we imported more than half of the oil we consumed. The Federal Energy Administration's Draft 1977 National Energy Outlook projects further increases in our dependence on foreign oil over the next decade. In the past three years, home heating bills have increased considerably because of the four-fold increase in the price of OPEC oil. Reducing our total demand for OPEC oil would be a real move toward less dependency.

Protecting our access to foreign energy supplies is one of the central aims of our foreign policy. This severely limits our political and military choices in a growing number of situations. Nothing would strengthen our world position more than to reduce our dependence on imported oil. Nothing would improve our relations more, with rich and poor nations alike, than correcting our extraordinarily wasteful habits. With only six per cent of the world's population, we consume 30 per cent of its energy resources. Many nations believe that we are taking more than our share of the world's patrimony, thus hastening the end of the age of fossil fuels before other energy sources can be developed to meet world needs.

By catering to endless demands for energy here at home, we risk destroying the essential resilience of our social and economic system. Resilience is the quality that allows a nation to recover rapidly from economic setbacks by correcting past errors and taking advantage of new technology.

Many of us take for granted the resilience of our economy, including the energy-producing sector. We grumble about higher fuel bills, but we tend to think of America as a leading producer of energy with virtually limitless reserves. If shortages occur, as they have this winter, many suspect they are caused by big producers holding back supplies. Some producers might be purposely withholding supplies. But that is not the root of the problem. Even the Arab oil embargo, the gas lines, and the power failures and brownouts in some of our cities failed to put across the message.

So let's say it loud and clear. We don't have the resilience we need when our response to

the OPEC embargo has been to steadily increase our dependence on foreign oil. We don't have the resilience we need when cold weather means factories and schools must close for lack of oil or natural gas. We don't have the resilience we need when we lock ourselves into highly expensive, centralized and inflexible power systems that take a decade or more to build.

The Atomic Industrial Forum forecasts that we will triple the number of nuclear power plants over the next decade. The average capacity of each new reactor will be 1000 megawatts. I have already indicated the enormous scope for conservation—which makes it highly questionable that we need this new capacity. Moreover, we are still a long way from solving the basic problem of radioactive waste disposal and providing adequate safeguards against nuclear accidents, sabotage and proliferation. Therefore, it will not increase our resilience as a nation to add all of these new reactors.

Our long-range planning has been based too much on past trends. Planning must result in forecasting future problems and requirements. We have concentrated on building large and complex systems that are vulnerable to a wide range of unforeseen circumstances. Business, industry, and consumers are paying more for less reliable service. They are at the mercy of vast regulatory bureaucracies that have insufficient awareness of public needs. Replacing this rigidity with resilience and self-reliance is one of the greatest needs for the entire nation and individual citizens.

The need for a national effort to save energy is so compelling that we all must do our part. Last month Senator Hubert Humphrey and I launched a private, non-profit, non-partisan organization called the Alliance to Save Energy. Its purpose is to develop a broadly-based constituency and to set quantitative goals for energy conservation in every sector of our society, including building construction, transportation, electrical power generation and industrial processes.

A number of groups and institutions such as your own federation are working in the area of energy conservation, but the Alliance to Save Energy is the first organization created solely for this purpose. It will not compete with existing groups, but will seek to supplement and strengthen the efforts of such groups as Illinois' Center for Alternative Energy.

President Carter has strongly endorsed the goals of the Alliance. Former President Ford and Vice President Mondale are Honorary Chairmen of the organization.

Alliance activities will be determined by a Board of Directors in consultation with an Advisory Board made up of individuals from all sectors of American life. ASE will generally operate by consensus with directors, advisors and members reserving the right to dissent from the organization's position and to express individual opinions. The Alliance will be funded by contributions from diverse sectors.

I am very pleased that Dick Robbins, your Executive Director, has agreed to serve on the Advisory Committee for the Illinois Conference on Energy Conservation to be held at the University of Illinois. This conference will help increase public awareness about the need to make energy conservation the centerpiece of our national energy program.

We will welcome suggestions from all of you about the types of activities this umbrella organization should emphasize. The following facts suggest the kinds of activities the Alliance can usefully pursue.

The American Institute of Architects estimates that a national commitment to upgrading the energy efficiency of buildings would, by 1990, save the equivalent of 12.5 million barrels of oil per day.

By adopting technologies now widely employed in other countries, the steel industry can reduce its huge fuel demands by about 50 per cent by 1995, according to a 1974 Ford Foundation study.

Recycled scrap aluminum requires only five per cent as much energy as aluminum refined from virgin ore.

Eric Hirst, a research engineer at the Oak Ridge National Laboratory, reported in the December 1976 issue of *Science* magazine that a vigorous conservation program in the residential sector could reduce energy use growth to almost zero by the year 2000—with no change in life-style and even with no increased use of solar energy.

Forty-five per cent of all industrial fuel, or about 20 per cent of the nation's fuel consumption, is used to generate process steam. If this steam were first used to generate electricity and then used as process steam, more electricity would be produced than the entire industrial sector now buys from utilities. This process, known as "cogeneration," produces much cheaper electricity than centralized power plants.

The transportation sector is one of the most rapidly growing areas of our society, yet there is tremendous scope for reducing energy consumption. Former Secretary of Transportation William Coleman, concluded, before he left office, that more efficient use of energy would actually reduce the total requirement for energy in transportation over the next decade.

Conservation is crucial to achieving our broad economic goals as a nation. "Conservation energy" is the cheapest, cleanest and most abundant source of new energy for economic growth. It is anti-inflationary. And investing in conservation is one of the best ways to tackle the unemployment problems while investing in new power plants is one of the least effective ways to create new jobs.

The appeal of conservation is non-partisan and non-ideological. Conservatives and liberals, oil companies and environmentalists, Israelis and Arab OPEC countries, are attracted equally by the prospect of stronger economic growth and energy self-reliance for America. By the same token, few Americans are attracted by the prospect of having our foreign policy mortgaged to foreign suppliers and our domestic life controlled by vast regulatory bureaucracies.

The concept of conservation is not revolutionary. It makes no radical or unfair demands on any sector of our society. It is *not* a prescription for a "no-growth" economy.

I believe we can all work together to solve our national energy problem. I am confident that the new Administration and Congress will face the energy crisis and act. But, the implementation and success of this effort to save depends on every American. With your cooperation we can get this important message to the people. Conservation means doing better, not doing without.

TRIBUTE TO MATEO "MATT" JIMINEZ, FIRE CHIEF, HAYWARD, CALIF.

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. EDWARDS of California. Mr. Speaker, it gives me great pleasure to rise today to extend my congratulations and pay tribute to an outstanding member of my constituency, and a good personal friend of mine, Matt Jiminez, fire chief of Hayward, Calif. It is with admiration, respect, and a touch of sadness that we see Matt retiring after 32 years with the Hayward Fire Department, 25 of which he served as chief.

Matt has shown us all what dedication and public service mean. He has seen the city of Hayward and its surrounding communities grow, and the complexities of fire fighting multiply. Matt has always been an innovator. From the one station, 9-man operation he joined in 1945, after World War II in the Navy, to the 6-station, 141-member team he now leads, his forward looking ideas have enabled him to bring the city of Hayward its high quality service. His dedication has been recognized and appreciated not only by his immediate community, but by the world, when he was named World Fire Chief in 1970, selected from 31 nations, and as he led the department last year to first place national honors in fire prevention education.

We will all miss his personal and professional integrity, unselfish dedication, and his leadership in the city of Hayward, and the fire fighting community of the world. I know his wife Bernice and his four children share a deep sense of pride for what Matt Jiminez has already accomplished and join with me in wishing him many more years of happiness and good health.

A TRIBUTE TO MINNESOTA CLOSE-UP'S BOB KLEPPERICH AND BILL LYNCH

HON. BILL FRENZEL

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. FRENZEL. Mr. Speaker, during my past 5 years in office, I have been a strong supporter of the closeup program—a program which has afforded students and teachers in my district and across the Nation an opportunity to observe, question, and involve themselves in politics. I have participated in many sessions with these youngsters and am always stimulated by the effect this experience has on them. Through their week in Washington, they are motivated to go home and take a more active role in their community.

With all the negativism that has been expressed about student apathy and general lack of interest in the political process, it is more important than ever that we take notice of the success of the closeup program, a program which many of my colleagues have helped to support through the Ellender fellowship program.

As a member of the closeup board of advisers and as a Minnesotan, I am particularly pleased with the continued growth and success of the Minnesota closeup program. I have just met with the final Minnesota group for this year, and am reminded of the many people throughout the State who have made the program work. This year's trip to Washington is the culmination of many months of planning and hard work. The

combination of efforts between the Closeup Foundation and urban concerns workshops, a local political education program is a particularly exciting development.

The continued interest in our young people that has been demonstrated through the work of Mr. Glen Skovholt, of Honeywell, and Mr. David O'Connell, of urban concerns workshops, the chambers of commerce, Mr. Donn Waage, of Northwest Bancorporation is most gratifying.

But all of closeup's participants and friends are grateful, most of all, for the work of two dedicated teachers—Mr. Bob Klepperich and Mr. Bill Lynch. These two teachers have given unselfishly of themselves in developing the entire Minnesota closeup experience. Literally, they are closeup in Minnesota. They have given 100 percent and have affected the lives of thousands of students as a result. I am most pleased to have had the opportunity to be associated with them, and to see the closeup program develop under their guidance.

It is not possible to overstate the hard work and the successes of Bob Klepperich and Bill Lynch. The many students and teachers who have gotten involved as a result of their efforts, will never forget the sacrifices that they and their families have made. Nor will any of us who support closeup and are in a position to observe their contributions forget their accomplishments.

THE LIBRARY SERVICES AND CONSTRUCTION ACT

HON. JOSEPH D. EARLY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. EARLY. Mr. Speaker, yesterday, for the second time, the House of Representatives overwhelmingly showed its support for the Library Services and Construction Act authorization. Last year, although the House passed the act by a vote of 378 to 7, the Senate failed to enact the new authorization.

I was detained in my district yesterday morning and did not arrive in Washington in time to vote on passage of the library services and construction bill. Had I been here, the measure would have had my full support, as it did in the 94th Congress.

I have requested this time, Mr. Speaker, to describe, for the record, the tremendous impact the Library Services and Construction Act has had on the libraries in the Third Congressional District of Massachusetts and the valuable extension of services it has helped to provide to the people of central Massachusetts.

As you know, the Library Services and Construction Act stands behind 20 years of improvements in the public libraries of the Nation. Its original intent has been modified through the years to meet the changing needs of State library systems to not only bring library resources and services to rural areas but to assist in collection expansion, building construction, nonprint media programing and interlibrary cooperation to name only a few of its contributions.

Priorities in long-range planning for title I funds, developed at the national level, have gone beyond the basics to focus on the special needs of those who are outside the mainstream of society. A growing number of LSCA grants have been awarded to libraries to establish special services to the handicapped, the institutionalized, the elderly, the economically disadvantaged, and the limited-English speaking. Title I grants have aided some 12 cities and towns in the Third District in 1976 alone—and some 200 cities and towns in the State of Massachusetts last year.

Under title III of the act, the Worcester area cooperating libraries was aided to generate cooperative ventures among different types of libraries and will hopefully lead to permanent service networks throughout the State that will bring wider and more efficient services to all citizens of the Commonwealth.

Mr. Speaker, the Library Services and Construction Act provides invaluable support to the libraries in central Massachusetts and throughout the State. I know its impact in my district and I have seen its benefits to the people of my area. There is a genuine necessity for Federal support of the public library systems in this country and I urge the Senate to promptly act to pass this legislation when it reaches that body.

BYELORUSSIAN INDEPENDENCE DAY MARKED

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. BIAGGI. Mr. Speaker, on Friday, the 59th anniversary of Byelorussian Independence Day will be observed. It is an event which is marred by the reality of life in Byelorussia today, where freedom is nothing more than a hope.

As our own nation enters its third century of freedom, we take note of the fact that the people of Byelorussia have only enjoyed fleeting moments of freedom throughout their history, particularly in this century. Their formal proclamation of independence of March 25, 1918, was followed almost immediately by the Soviet Government crushing most of the newly declared freedoms of the Byelorussian people. By 1944, the Soviet Union had assumed full control over the Byelorussian nation, a control they have never relinguished.

Life for the people of Byelorussia over the past three decades has been harsh. It is a life charactrized by persecution and a complete deprivation of freedom by the Kremlin. Those few who dare to object are subjected to long periods of incarceration and their families and friends endure harassment by authorities. The right to emigrate, despite the declaration of Helsinki remains almost nonexistent.

The people of Byelorussia as well as millions of other captive peoples held great hopes when the policy of détente between the Soviet Union and the United States was established in the early 1970's. Yet the hopes for an improvement of life for the Byleorussians were never realized under détente.

However, with the advent of the Carter administration, hope springs anew throughout Eastern Europe. The President's outspoken stand in favor of human rights and self-determination have generated a new optimism throughout Byelorussia. It is a position which has already provoked strong responses from the Soviet Government, but it appears likely that our Government will not be intimidated in its pursuit of human rights.

Despite their years of oppression, the desire to be free remains in the hearts of many Byelorussians. Theirs has been a long and agonizing struggle which has yet to reach its fruition. Yet the struggle has been made more bearable by the support which their supporters and friends in this Nation provide. The cause of freedom is a just one, yet freedom continues to be elusive for the people of Byelorussia. It is the fervent hope of many in this Nation that the struggle for freedom and justice can still be won by the people of Byelorussia. They merit our continued support.

THE PAY RAISE CONTROVERSY

HON. MORRIS K. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. UDALL. Mr. Speaker, since the beginning of this Congress more has been written and spoken on the so-called congressional pay raise than on perhaps any of the other public issues. There are important and debatable issues involved, but I have rarely seen a matter on which more misinformation and distortion have been circulated, and what is worse, widely accepted by the public.

Recently, the Democratic Study Group published a detailed historical study, which is factual and objective, and should be widely read. The report should help to put to rest some of the more outrageous "facts" which have come to be accepted by large segments of the public. Just to list three:

First. One could read the majority of news accounts and congressional mail on this subject, and come to the conclusion that only Congressmen were affected. Fact: The adjustment covered 1,081 Federal judges, 865 Cabinet and top executive branch officials, and 20,000 other executive officials in the top career service.

Second. Twelve thousand five hundred dollars is a lot of money, and 28 percent is a large raise. But most Americans in this time of inflation have their salaries adjusted annually, or biannually, while congressional pay has been adjusted only 11 times since George Washington met with the first Congress in 1788. On any kind of annualized basis, the increases have been modest.

Third. My mail suggests that many citizens believe that congressional salaries are tax free, that no deductions are

taken out, and that there is a generous "free" retirement system. Out of the new salary, approximately $15,000 will be withheld for Federal taxes, 8 percent or $4,600 per year will be deducted for payments to the civil service retirement fund, $400 per year for health insurance, and other deductions as well.

I encourage our colleagues to read this report as it places in proper perspective the entire question of congressional pay:

THE PAY RAISE CONTROVERSY

This DSG Special Report deals with the continuing controversy over the recent pay raise for Members of Congress, Federal judges, Cabinet officers and other top officials of the Executive Branch.

Although the increase covered some 23,000 federal officials, virtually all of the controversy and criticism has focused on the 535 Members of Congress—in particular. Members of the House of Representatives—because they did not vote to increase their own pay.

This is precisely how the law—which was enacted in 1967 before 70% of the current House and 60% of the Senate were even elected to Congress—was intended to work. Nonetheless, the impression has been spread, by critics and the press, that Members of the 95th Congress concocted a scheme and engaged in devious tactics to "give themselves" an undeserved pay raise without a vote.

The debate over congressional pay increases is expected to continue over the next two years as Congress considers proposed changes in the pay adjustment procedure and takes action on possible future increases. This Report, therefore, is designed to clear up some of the misconceptions regarding the recent pay increase and the procedure whereby it took effect, in order that future debate may be conducted on the merits of the issues involved.

The Report contains the following sections:

	Page
I. How Members' Pay Is Adjusted	3
II. Future Legislative Action	7
III. Criticisms and Responses	9

Appendix.—Comparison of Salary Increases For Various Groups Since 1969.

SECTION I—HOW CONGRESSIONAL SALARIES ARE ADJUSTED

Although Congress retains the authority to pass legislation setting salaries for Members of Congress and other top officials of the Federal Government, such salary adjustments today occur under two laws enacted within the past decade: The Quadrennial Commission Law (PL 90–206) enacted in 1967 and the Executive Salary Adjustment Act (PL 94–82) enacted in 1975. This section summarizes how these two laws operate and what has occurred with respect to congressional salaries since their enactment.

The Quadrennial Commission

The Quadrennial Commission is a blue-ribbon citizens' commission composed of nine members: Three, including the Chairman, appointed by the President and two each appointed by the Chief Justice of the Supreme Court, the Speaker of the House and the President Pro tempore of the Senate.

The Commission meets every four years to recommend pay levels for Members of Congress, the Judiciary and other high government officials. The Commission's recommendations are submitted to the President who can either accept them in toto or make any changes he sees fit. The President then submits the recommendations to Congress as part of the federal budget and they take effect automatically within 30 days unless either the House or the Senate passes a resolution of disapproval.

The Congress is not required to take any action whatsoever with respect to the President's pay recommendations, nor may Congress increase or decrease the proposed pay levels. It may only vote to disapprove all or some of the recommended adjustments.

Executive Salary Adjustment Act

This law provides that Members of Congress, federal judges, and other top government officials shall automatically receive the same government-wide percentage pay increase granted to civil service workers under the Federal Pay Comparability Act of 1970 (FPCA).

Under the FPCA, the Directors of the OMB and Civil Service and an Advisory Committee on Federal Pay recommend adjustments in federal employee pay scales to keep them comparable to those in the private sector. The President must issue an executive order putting the recommendations into force by October 1 of each year unless he deems the change inappropriate. In that case, the President must make an alternate proposal which takes effect automatically unless rejected by either House of Congress. If the President's proposal is rejected, then the original recommendation takes effect without further action by Congress.

Conflict of Interest

The Quadrennial Commission and Executive Salary Adjustment laws were specifically designed to take Congress out of the business of setting its own salaries, while at the same time retaining within Congress the power to veto unwarranted increases.

Prior to 1967, Members of Congress were in the unique and politically intolerable position of having to both set and vote on their own salary levels—a situation which many Members and congressional observers believe was a blatant conflict of interest in view of House Rule VIII, Clause 4, which provides that: "Every Member shall vote on each question put, unless he has a direct personal or pecuniary interest in the outcome of that question."

In addition, having Members vote on their own pay increases invited political grandstanding, both by potential opponents and Members themselves, thereby fueling public opposition to pay increases. As a result, congressional salaries historically have lagged far behind comparable positions of responsibility in the private sector.

For example, during the 180 years from the 1st Congress in 1789 to the 91st Congress when the first Quadrennial Commission pay raise took effect in 1969, Members of Congress received only eight permanent salary increases.[1]

This averages out to a pay increase every 22½ years, with two instances when there was a span of more than four decades between pay increases.

Congressional Vetoes of Pay Increases

Congress has informally or formally vetoed three proposed pay raises since 1968.

In 1969, the first Quadrennial Commission recommended a congressional salary of $50,000. At the urging of the Congress, President Johnson reduced that figure to $42,500.

In 1973, the second Quadrennial Commission recommended, and President Nixon approved, a congressional salary of $53,000. However, the Senate disapproved that pay level by a vote of 71 to 26. (The House Post Office Committee had also recommended disapproval, but the Senate action negated the need for a vote on the Floor of the House.)

In 1976, Congress passed an amendment to the FY 1977 Legislative Branch Appropriations bill to bar the use of any funds to pay for a 5% salary increase due October 1, 1976, under the Executive Salary Adjustment Act.

[1] This does not count pay adjustments which were designed to restore Members' pay to the level which prevailed before temporary pay reductions, such as occurred during the Depression.

Pay Raises Since 1969

Members of Congress have received two pay increases totalling $15,000, or 33%, over the past eight years.

In 1975, congressional salaries were increased from $42,500 to $44,600—a 5% raise—under the Executive Salary Adjustment Act. The 5% figure was recommended by President Ford in lieu of an 8.33% increase recommended to the President by the Directors of the Office of Management and Budget (OMB) and the Civil Service Commission.

The second increase since 1968 was the one which took effect on January 20 of this year. This increase, which raised Members' salaries to $57,500, was recommended by the Third Quadrennial Commission, chaired by Peter G. Peterson, former Republican Secretary of Commerce.[2] The Commission recommended that the proposed pay increases be tied to adoption of a new and more stringent code of ethics for all three branches of government. Both President Ford and President-elect Carter endorsed the proposed increase and the recommendation for a more stringent code of official conduct. The Senate, by a vote of 56 to 42, rejected an effort to disapprove the proposed pay increase. In the House, a special subcommittee of the Post Office & Civil Service Committee held hearings on the proposed pay increase and twice voted against sending a resolution of disapproval to the House Floor. Thus, there was no House vote on the matter.

In accord with the Commission's call for adoption of a new code of ethics, the House on March 2 approved H. Res. 287, which requires full financial disclosure by Members and their principal assistants, limits the amount of outside earned income Members may receive to 15% of their salary, places a $750.00 limit on any honorarium, prohibits acceptance of gifts totalling more than $100 in value in any calendar year, abolishes unofficial office accounts, prohibits conversion of political funds to personal funds, imposes new restrictions on use of the congressional frank, and prohibits official travel by "lame duck" Members of the House. The Senate is expected to pass a similar measure in the near future.

Overall, the 1977 increase affects 22,861 federal officials and will cost about $118 million. Thus, the 535 Members of Congress represent only 2% of the total number of officials covered by the increase, and the $7 million cost for congressional increases represents only 6% of the total cost.

Following is a breakdown of the increases for the three branches of the Federal Government:

Category	Number of officials affected	Percent salary increased	Cost of increase (millions)	Percent of total cost
Members of Congress and related officials	550	29	$7	6
Judges and other judicial officials	1,081	44	19	16
Cabinet and top executive officials	865	32	11	9
Other executive officials	20,365	10	81	69

SECTION II—ANTICIPATED LEGISLATIVE ACTION

Congressional pay is expected to be an issue throughout the 95th Congress. The

[2] Other members of the Commission are: Lane Kirkland, Secretary Treasurer, AFL–CIO; Norma Pace, Senior Vice President, American Paper Institute; Joseph F. Meglen, law partner, Meglen & Bradley; Bernard Segal, past President, American Bar Association; Edward H. Foley, former Undersecretary of the Treasury; Sherman Hazeltine, Chairman of the Board, First National Bank of Arizona; Charles T. Duncan, Dean, Howard Law School; and, Chesterfield Smith, past President, American Bar Association.

issue will be raised both in the form of Floor votes to prevent any additional pay increases this Congress and in the form of proposals to change the procedures for consideration of congressional pay increases.

Expected floor votes

The Senate has already passed—by a vote of 93 to 1—legislation to prevent the automatic increase which will occur October 1, 1977, under provisions of the Executive Salary Adjustment Act. Similar legislation has been introduced in the House, and either a House bill or the Senate bill (S. 964) is expected to come to a vote this year. Legislation to prevent a similar increase from occurring in October 1977 is also anticipated.

Other anti-pay raise efforts could involve amendments to Fiscal 1978 and 1979 Budget Resolutions, Legislative Branch Appropriations bills, and continuing and supplemental appropriations bills which appropriate funds for congressional salaries.

Last Congress, both the House and the Senate approved an amendment to the Fiscal 1977 Legislative Branch Appropriations Act striking funds to pay for the October 1976 comparability adjustment. Thus, while the salary level for Members of Congress increased in law to $46,800 in October 1976, Members did not receive that increase and continued to be paid at the $44,600 level until last month, when the 1977 pay increase took effect.

Proposed changes in pay raise procedures

Numerous bills have been introduced to change the present procedures for consideration and approval of congressional pay adjustments. The House Post Office & Civil Service Committee plans to hold hearings in the near future on the proposed changes. Following are changes which have been proposed:

Require Direct Vote on Pay.—Prohibit any pay raise from taking effect without a direct affirmative vote by the Members of Congress.

Defer Pay Raises.—Defer any pay raise until the Congress following the Congress in which the raise is approved, even if the increase is automatic (i.e., takes effect without a House or Senate vote).

Biennial Review.—Review and adjust salaries every two years rather than every four to avoid big increases as in 1977.

Permanent Commission.—Make the Quadrennial Commission a permanent body to continually review salary levels and other forms of compensation such as pensions, life insurance, etc. The Quadrennial Commission exists for only one year, too short a period to make a comprehensive study of compensation other than salaries.

Repeal Annual Comparability Adjustments.—Repeal provisions of the Executive Salary Cost-of-Living Adjustment Act which allows automatic adjustments in salaries of Members of Congress based on comparability increases for federal employees.

Separate Congressional Pay.—Divorce consideration of congressional pay recommendations from those of federal judges and executive branch officials.

Ease Procedures for Direct Vote on Pay.—Make it possible to obtain a direct vote by the full House on a pay raise via the discharge petition by reducing the period a pay bill must be in committee before a discharge motion can be filed from 30 legislative days to 10 calendar days. This would permit a majority to obtain a vote in the House without a resolution of disapproval from the Post Office & Civil Service Committee.

SECTION III—CRITICISMS AND RESPONSES

This section contains responses to the major criticisms which have been made with respect to the 1977 pay increase.

Size of the pay increase

Criticism.—The pay increase is too large. It is $12,900 over the former pay level, an increase of 29%.

Response.—Congressional salary increases tend to appear unreasonably large because they are few and far between and have lagged far behind those for comparable jobs in the private sector for most of our history. For example, during the entire history of Congress, Members have received only 11 permanent pay increases (including the 1977 increase—an average of one every 17 years).

All but one of the 11 increases was in excess of 25% and the average increase was nearly 50%. The 11 permanent increases were:

33% in 1818.
138% in 1856.[3]
67% in 1866.
50% in 1907.
33% in 1925.
25% in 1947.
80% in 1955.
33% in 1965.
42% in 1969.
5% in 1975.
29% in 1977.

Overall, the 11 increases shown above represent an average of $5,200 each. Had members of Congress received annual pay adjustments as do most Americans, the size of their pay increase would be only a fraction of that shown above. For example, if the total of all congressional pay increases since 1789 were divided into equal annual amounts, Members would have received an average annual raise of 2.12%.

Despite the size of the 1977 increase (29%), it is not out of line when compared to increases in the cost of living and pay increases received by other segments of society. The 29% increase is less than half the percent of increase in the cost of living since 1969 (61%). It is also less than half the percent of pay increase received since 1969 by blue collar workers (70%), civil service employees (66%), broadcasters and news reporters (over 80%), and business executives (60%). (See Appendix.) Had congressional salaries increased at the same rate as the pay of most Americans, Members of Congress would have received salary increases totaling $25,000 to $30,000 since 1969.

The pay of Members today, adjusted for inflation, is only slightly more than what they received in the 1930s when serving in Congress was only a part-time job. Today, Members are paid $57,500 per year—the equivalent of $13,750 in 1935 dollars—and Congress is in session for 10 or 11 months each year. In 1935, on the other hand, Members were paid $10,000 per year—the equivalent of $45,000 in today's dollars—and Congress usually was in session less than six months each year.

Thus in 1935 Members could spend half of each year augmenting their income through other occupations, while serving in Congress today is a full-time job with strict limits (effective next Congress) on the amount of outside income a Member may earn.

Also, as the length of the session has increased so has the workload of Members. In fact, the increase in workload over the past decade is unequalled in the history of Congress and has caused numerous Members to leave public service altogether. For example, the number of votes on which Members must be recorded has increased from about 200 per Congress during the early 1960s to nearly 1,300 last Congress. Since 1969 alone, the number of record votes has tripled, the number of committee meetings Members must attend has nearly doubled, and the volume of mail Members must answer has tripled—from an overall House total of 14 million in 1969 to more than 42 million in 1976. Finally, Members have had to increase by five-fold the number of trips home to meet with constituents and to attend to other matters in their districts.

No vote on the pay raise

Criticism.—Congress engaged in devious tactics to avoid a direct vote on the pay increase.

Response.—There was nothing devious about the way in which the pay raise took effect. It became effective under the established procedure which was designed to take Congress out of the conflict-of-interest position of setting and voting on its own salary levels, while leaving Congress the power to veto pay recommendations.

The procedure—which was adopted nearly 10 years ago when nearly 70% of the current Members of the House were not in Congress—does not require any action whatsoever on pay increases recommended by the Quadrennial Commission and the President. Nor does the law permit Congress to either increase or decrease the proposed pay levels. All Congress can do is permit the pay raises to take effect or veto them.

House consideration of the recent pay raise went according to the law. A House Post Office subcommittee considered disapproval resolutions and twice voted against reporting one to the House—which was why there was no vote on the pay raise on the House Floor. The Senate voted 56 to 42 to table a disapproval resolution.

A three-judge federal district court ruled against a constitutional challenge to the pay raise procedure. Rep. Pressler challenged the procedure on grounds that the Constitution requires Congress to vote affirmatively on any pay increase. The suit is currently on appeal to the Supreme Court.

Criticism.—The pay increase should not have been permitted to take effect until next Congress. Two types of deferral are advocated: President Carter, for example, has taken the position that *all* "pay increases for federal judges, Members of Congress, or top level employees in the Federal Government" should not "go into effect until after the next general election." Others contend that only congressional pay increases should be deferred until after the next election.

Response.—The concept of deferring congressional pay raises alone is based on two principles: 1) That Members of Congress should not personally benefit—or appear to benefit—from their vote in Congress, and 2) that elected officials should not receive a higher salary than that which existed at the time they were elected.

The first principle does not apply in the case of the 1977 pay increase because Congress did not vote to increase its pay. The pay increase took effect automatically, without an affirmative vote, in accord with the procedure established by law to take Congress out of the business of voting pay increases for itself.

The second principle might be made to apply to Members of the House, but it becomes unrealistic when applied to the Senate because only one-third of the Senate stands for election every two years. Thus, if the pay increase for Members of Congress were to be deferred until after their next election, it would mean that only one-third of the Senate would be eligible for the increase in 1979, while another one-third would not be eligible for the increase until 1981 and the 33 Senators who were elected or re-

[3] Members pay was increased from $8 per day to $3,000 per year. During the 38 years from 1818 to 1856, Congress was in session an average of 157 days per year. Thus, Members' pay averaged $1,256 per year.

elected last November would not be eligible to receive the increase until 1983.

Thus, while an across-the-board deferral policy might make some sense, there is no justification for singling out congressional salary increases for deferral while permitting those for Federal judges and Administration officials to take effect immediately.

DRAFT? NOT YET

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. STEIGER. Mr. Speaker, those debating whether the United States should return to the draft to bring people into the Nation's armed services sometimes give the impression it is the only alternative to the present all-volunteer military.

Nothing could be further from the truth. First, it should be emphasized that the Volunteer Army is a success and that veteran military officers and Defense Department officials say it is the best military force the Nation has ever had.

There are some problems, of course, as there are in any organization. But they are far from insurmountable, and they are minimal in comparison to the success of the volunteer concept.

What many forget, or choose to ignore, is that those problems which do exist are not remediable only by returning to conscription, and the even greater problems attendant with it. Rather, there are a whole range of management options that can and should be considered to correct those few problems with the volunteer force.

Some of those management options are discussed in the March 21 Air Force Times. There are other options as well, and I will attempt to expand on some of them in the weeks ahead. The Air Force Times articles follows:

DRAFT? NOT YET

The present debate over restoring the draft was predictable.

It did not take much of a prophet to guess that recruiting would falter when the draft died—if not immediately, then eventually.

The impact was delayed while the nation was in severe economic difficulties. High civilian unemployment replaced the draft as the force propelling many people into service.

Now, with some apparent improvement in the economy, recruiting has become more difficult.

We don't know why that fact comes as such a surprise. It may be because the Pentagon has been touting the all-volunteer force as such a howling success.

Things aren't all bad yet, but the reserves are in serious trouble, the Army and Marine Corps have missed some quotas and the Air Force and Navy are nervous about the future. Officials aren't actually saying we should restore the draft, but they seem to be sending signals—"If our ability to attract adequate numbers of qualified people deteriorates further . . ."

Well, we don't think it's time to throw in the towel quite yet. First, we think, Congress and the administration should take a hard look at service life from the standpoint of the young people whom the services are trying to recruit.

The military has a lot to offer. The old lures—training, travel, worthwhile service—still are there. The pay is the best it ever has been. The benefits, at least for career people, are not bad.

But what sort of life does service offer for the first two or three years of service—particularly to enlisted members? Bachelors can expect a barracks-and-mess-hall existence that has not changed greatly in several decades. Married EM can expect long family separations unless they can afford to move their dependents through a variety of assignments.

We aren't sure the services can offer what they will have to offer in a competitive labor market.

Before we go flying back to the draft as the answer, however, we can think of a number of steps to improve the attractions of the all-volunteer concept:

Extend full dependent-travel and transportation entitlements to all enlisteds.

Put all EM on basic allowance for subsistence and let them eat where they choose.

Equalize quarters allowance for married and single people (at the with-dependents rates) and let bachelors decide where they want to live.

Remove the inequities between officers and enlisteds in such systems as that for figuring travel per diem.

Except in the case of basic pay and major allowances, remove rank as a criterion for monetary benefits.

Establish a severance pay system for enlisteds similar to that for officers who are separated involuntarily.

Overhaul the Veterans Education Assistance Program and mesh it with the in-service tuition assistance program to provide an attractive education incentive.

Open more commissioning channels to qualified EM and provide a stable career program for those who choose to remain in the enlisted structure.

Provide an "open" service contract from which an enlisted can ask release (with due notice) but with the understanding that training and certain assignments will carry an additional commitment.

Few of these ideas are new. Some would be highly expensive to provide.

The choices, it seems to us, are coming down to these: (1) To offer a quality of life acceptable to qualified young people or (2) To use the power of the federal government to force them into service for whatever limited period the nation will tolerate.

We don't know whether the all-vol idea will work even with the suggested improvements, but it seems worth a try before considering a return to the draft. We do know that the draft, with its attendant high loss and replacement rates, is not a cheap solution.

We do not suggest merely throwing money at the problem. True, there would be a price tag on most of the items discussed. But, there also is a change of philosophy embodied in most of them. We think this approach at least would give recruiters some bargaining power.

COMMON SITUS BILL WOULD TURN THE CONSTRUCTION INDUSTRY INTO A NATIONWIDE CLOSED UNION SHOP

HON. J. HERBERT BURKE

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. BURKE of Florida. Mr. Speaker, I would like to call the attention of all my colleagues to an editorial appearing in the Fort Lauderdale News on March 13, 1977, entitled "Common Situs Bill Nothing More Than Closed Union Shops." The editor rightly states that common situs picketing is nothing other than a form of economic coercion designed for the singular benefit of the building trades union. It is a measure which strikes at the very concept of freedom of choice both for the employer and for the worker. It is, in short, the first step in the attempt by the labor unions to repeal section 14b of the Taft-Hartley Act which would allow States to enact right-to-work legislation.

Mr. Speaker, we have heard a great deal of talk from labor unions about consumer rights, housing for the poor, and the general good that labor organizations do for the country. This talk has become all too familiar.

But, how can consumer rights be guaranteed when the costs of higher wages are necessarily passed on to him? Every time labor goes on strike and demands higher and higher wages, the consumer suffers. And it should not be forgotten that we are all consumers.

Furthermore, how do you get housing for the poor and for those just starting out in life when the costs of labor move continuously upward? Everytime labor strikes for higer wages, construction costs soar. The result is that those workers who are least able to afford these higher costs are forced to carry a disproportionate share of the burden.

Mr. Speaker, it is about time that the American people recognize that the labor unions do not represent all the workers. In fact, they represent only about 12 percent of the working men and women in the United States. And their policies are designed only for those few which they do represent. The rest of us are made to suffer their excesses.

In the final analysis, the attitude of the labor unions towards the American economy, the American worker, the American consumer and the American construction industry are shallow indeed. Instead of protecting the American worker, their policies actively work against the large segment of our working society.

Mr. Speaker, I urge my colleagues in the U.S. House of Representatives to give a careful reading to the following article. In addition, I urge each and everyone of you to join with me in voting against H.R. 4250 which would permit secondary boycotts in the construction industry. This is a bill which can only place additional burdens on the American taxpayer and which will stifle the hope of the many young and poor who are already finding it difficult to buy housing and those essentials necessary for a respectable life.

The article is as follows:

[From Fort Lauderdale News and Sun-Sentinel, March 13, 1977]

IT'S OUR OPINION—COMMON SITUS BILL NOTHING MORE THAN CLOSED UNION SHOPS

The controversial "common situs picketing bill" has returned with more vigor than ever, but it remains no more attractive.

The bill, which President Carter pledged to sign while he wooed the voters during his

campaign, would allow strikers to picket—and possibly shut down—an entire construction site in a dispute with only one contractor.

The legislation is one of organized labor's key goals in the 95th Congress and it should be fought to the bitter end.

Opponents of the bill—including most business leaders, contractors and so called "right-to-work" lobbyists—generated enough public furor over the bill in 1975 to force then President Gerald Ford to back down on an earlier pledge to sign the legislation.

Though President Carter says he will sign the bill, there is a great deal of opposition within his administration. Even his budget director, Bert Lance, is firmly against the bill and has clearly spelled out the evils in it. Lance's position on the controversial measure has provided some encouragement to opponents to prevail upon the president as they did with Ford.

With President Carter's backing and with the support from Secretary of Labor Ray Marshall, the sponsors of the bill and the unions feel they have clear sailing.

Passage of the common situs picketing bill is a prelude to an attempt to reach an even bigger goal: repeal of section 14b of the Taft-Hartley Act which allows states to enact "right-to-work" laws. Twenty states, including Florida, have such bans on requiring workers to join unions as a condition of holding their jobs.

The effect of the bill will be to coerce general contractors to use only union subcontractors, force nonunion workers off jobs, lessen the competition, increase construction costs and restrict freedom of choice for employers and workers.

As the fierce battle lines are being drawn, this is a time when labor and management should be sitting down together and trying to get answers to the problems of an economy that is running out of opportunities for real growth.

The union proposal goes in exactly the wrong direction. It all points to compulsory unionism for everyone, regardless of choice.

That certainly is sufficient reason to kill the bill, which is nothing more than a scheme for turning the construction industry into a nationwide closed shop.

SICK PAY EXCLUSION

HON. MICHAEL T. BLOUIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. BLOUIN. Mr. Speaker, as you are well aware, Congress passed a law last year called the Tax Reduction Act of 1976. Generally, I believe that new law was a significant and important step in the direction of a more equitable and just tax system for this country.

However, one section of the law is clearly unfair to some 1.2 million American taxpayers who are sick or disabled. This section repealed the personal income tax deduction for sick pay. Since the law was retroactive to January 1, 1976, it left many, if not most of these taxpayers, with sudden and unexpected tax bills for the previously uncollected tax on sick pay.

The House Ways and Means Committee is considering legislation now to repeal the retroactive nature of the sick pay exclusion section. Today I had the opportunity to submit testimony to the committee, supporting that legislation, and I would like to enter the text of my prepared remarks in the RECORD.

The text of my testimony follows:

SICK PAY EXCLUSION

Mr. Chairman and Members of the Committee, I appreciate the opportunity to add my remarks to the long list of my colleagues who have appeared before the Committee or submitted testimony on legislation to postpone that section of the 1976 Tax Reduction Act which eliminated, retroactively, personal income tax deductions for sick pay.

As you are well aware by this time, this particular section of the 1976 law was clearly unintentional and extremely unfortunate.

I, for one, and I think most of my colleagues in the House and Senate, simply did not realize the disastrous impact which this particular provision of the law would have on some 1.2 million American taxpayers who were accustomed to taking a personal tax deduction for sick pay.

I am particularly concerned because the retroactive nature of the provision left many American taxpayers with totally unexpected, and in some cases, severely burdensome tax bills which they did not anticipate. It is, as many of my colleagues have told you, simply unfair to these taxpayers who are already burdened by difficult and unusual medical and financial problems.

Faced with the sudden realization that their sick pay is no longer tax-deductible, and that they owe taxes on it retroactive to January 1, 1976, my constituents and others like them all across the country have reacted with surprise and anger. They are both confused and frustrated. And in not just a few cases, they are very worried that fragile and delicate budgets which once just met their needs will not be able to expand to accommodate these additional and unexpected taxes.

One of my constituents, a former Post Office employee in Marion, Iowa, who retired for medical reasons after 22 years of service, has been receiving monthly sick pay benefits and claiming his personal tax deduction since 1969. Suddenly, in October of last year, he discovered that he would owe over $1,100 in taxes on that sick pay for 1976. "I don't mind paying taxes," he wrote to me recently, "but why weren't we informed of this early in 1976 so we could have planned on it, or why wasn't this made effective Janauary 1, 1977? The big question is where the heck am I going to find $1,100 at this late date?" The question, obviously, for this man is not rhetorical.

Another of my constituents, from Clinton, Iowa, was more angry than confused. "All of a sudden I am faced with retroactive taxes! The 16th Amendment says taxes will be levied according to the ability to pay. What a laugh! I realize I may be getting incoherent, but you people disgust me. In any future elections, I will never vote for the incumbent."

And a Cedar Rapids, Iowa, constituent, who has been forced to retire after two recurring heart attacks, explained a situation which I am afraid is all too typical of American taxpayers who have been caught off guard by this change in the law. "I had worked . . . for 22 years and had built up nine months full-time pay and three months half-time pay," this man wrote. "With the existing tax laws in effect, it gave me a little extra money which we used to pay off all the bills we could so we would make it on Social Security and a small disability pension . . ."

"I have worked since I was 13 years old and never depended on anyone for help and I don't want to now," the man continued. With the change in the law last year, however, he now faces an extra $1,000 in taxes he did not expect to pay. "With all the medical bills I've had to pay, but was able to handle, it is just going to wipe us out. If I could go back to work it would still be bad, but could be handled; but now it's going to be a real problem."

What can we say to people like this, Mr. Chairman? I am hopeful that we can tell them that Congress has recognized its mistake that it has rescinded the retroactive application of the law.

This is the only fair solution. The cost of extending the personal income tax deduction for sick pay through 1976 would cost approxi- $380 million in anticipated federal revenue for fiscal 1977. That seems to be to be a small amount to pay for assuring that no one will face unexpected tax liability for sick pay they received in 1976.

It is the least we can do for individuals who are already in difficult financial circumstances because of illness or disability. It certainly is far less than we seem so eager to do for the giant multinational corporations and international oil companies who are so quick to plead the injustice of current or pending tax laws.

PUBLIC FINANCING OF CONGRESSIONAL ELECTIONS

HON. JOSEPH L. FISHER

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. FISHER. Mr. Speaker, last week I joined in sponsoring the legislation put forth by Representatives UDALL, ANDERSON, WIRTH, and BURTON to provide public financing for congressional campaigns. This legislation, endorsed by Common Cause, offers a reasonable, limited system of Government matching funds for congressional candidates who have shown their genuineness by raising an initial sum in small donations and who agree to abide by spending limits.

Under the provisions of the bill, matching funds from the dollar check-off would be available to candidates who agree to abide by a spending limit of $150,000 and who raise an initial $10,000 in donations of $100 or less. From that point candidates would receive $1 for each $1 raised, up to a ceiling of $100 for each contributor and $50,000 overall.

This legislation offers a good basis for discussion of the public financing issue. I believe some constructive changes could be made in its provisions. For example, the bill imposes limits on the size of campaign contributions. It allows a maximum of $2,500 from any one source in the primary and sets the same limit in the general election. I would prefer to see lower limits: $1,000 for groups and $500 for individuals in the primary and the same in the general election. These are the limits I have imposed in my two campaigns for the House and they have not prevented my raising the money necessary to run a proper campaign.

Under the bill, personal spending by candidates who accept matching funds would be limited to $25,000 for House elections. I would like to see that limit lowered. Candidates should be subject to the same limit imposed on other contributors—$500 in the primary election and an additional $500 in the general election.

I would like to see the House move in the direction of making matching funds available on a dollar for dollar basis up to the spending ceiling. A requirement to raise an initial sum in small contributions should be maintained as should an

upper limit on total campaign expenditures. Ideally, I would set the upper limit for expenditures at $100,000 rather than the $150,000 specified in the bill.

The strongest argument in favor of public financing for congressional campaigns is that it will go a long way toward removing the dependency of candidates, both incumbents and challengers, on large contributions from special interest groups in business, labor, professions, consumer affairs, and elsewhere. The success of public financing in the recent Presidential campaign encourages the introduction of public financing into congressional campaigns. I hope the committee will begin consideration of this matter as soon as possible.

REINTRODUCTION OF H.R. 3800

HON. MARK W. HANNAFORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. HANNAFORD. Mr. Speaker, today I am reintroducing H.R. 3800, my bill to give civil service retirees a second chance to elect a survivor beneficiary. Joining me are 41 of our colleagues, including the chairman of the Post Office and Civil Service Committee, the chairman of the Compensation and Employee Benefits Subcommittee, and 9 other members of the Post Office and Civil Service Committee. This legislation is also fully supported by the National Association of Retired Federal Employees.

H.R. 3800 provides those retired civil service employees who did not elect a survivor annuity at the time of retirement with a second opportunity to elect this benefit for their spouse or an "insurable interest" survivor. According to the Congressional Research Service, as of 1975 there were nearly 380,000 civil service retirees who had not elected a survivor beneficiary. Many of these men and women find themselves in this situation as a result of misinformation or carelessness.

My bill does not provide a free benefit. Those who did elect a survivor annuity at retirement have had money withheld from their pensions every month to pay for the annuity. I am, therefore, requiring that anyone who takes advantage of this second-chance election must pay back into the fund a sum equal to the amount they would have paid had they elected this benefit at the time of retirement.

To ease the administrative burden on the Civil Service Commission, I have stipulated that retirees will have 1 year from date of enactment of H.R. 3800 or 1 year from date of retirement, whichever is later, to make use of this second-chance election. I am also requiring that persons retiring after enactment of the bill, who wish to make the second-chance election, must pay back any additional money they have received with the amount of interest it would have accrued had it remained in the retirement fund. This should serve to deter a person from not electing a survivor's benefit simply to use the additional money as an interest-free loan. However, the interest would not increase the amount owed by a great enough sum to discourage anyone from electing the annuity.

Mr. Speaker, I urge the Congress to act quickly and decisively in approving this measure. Civil service retirees have earned the right to provide their survivors with an annuity, and I believe that we should grant them this second opportunity to exercise that right.

SUMMARY OF BILL CLARIFYING THE SOCIAL SECURITY TAX STATUS OF THE MEMBERS OF CERTAIN MISSION SOCIETIES

HON. BARBER B. CONABLE, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. CONABLE. Mr. Speaker, the status of members of certain mission societies under the Federal Insurance Contribution Act has become confusing as a result of an Internal Revenue Service ruling. In an effort to clarify the situation, I am today introducing a measure which would permit these individuals to pay social security taxes as self-employed persons. So that all Members might familiarize themselves with the need for this change, I ask that a statement on the bill be inserted in the RECORD at this point:

SUMMARY OF BILL CLARIFYING THE SOCIAL SECURITY TAX STATUS OF THE MEMBERS OF CERTAIN MISSION SOCIETIES

The Internal Revenue Code does not treat ministers and members of religious orders as regular employees for social security purposes. Instead, they are regarded as self-employed people. As a result, they pay less social security tax than the combined total that would be paid by the employer and the employee if they were treated as regular employees. In addition, ministers and members of religious orders are entitled to be exempted, on account of religious principles, from payment of tax entirely, even though they are self-employed.

The Internal Revenue Service has ruled that many Protestant missionaries are not "ministers" because those missionaries are not authorized to perform all the religious functions which ministers of their faith may perform in the United States. For example, many missionaries who are women are limited in authority by their churches, and so do not qualify as ministers. In addition, in almost all cases Protestant missionaries are not members of religious orders. On the other hand, in the Roman Catholic Church, such missionary functions are frequently performed by members of religious orders, who thereby avoid the combined social security taxes on employers and employees.

As a result of this distinction, American supporters of those Protestant missionaries must pay more support money than is needed for Catholic missionaries or for Protestant missionaries who meet the Service's definition of a minister. Furthermore, many Protestant missionaries and their churches are uncertain whether they should pay social security taxes as regular employees or as self-employed persons.

This bill would remedy the situation by placing missionary members of mission societies on a par with members of religious orders for purposes of the social security and self-employment taxes.

To prevent abuse, the bill defines a mission society as a tax-exempt organization that is sponsored or availed of by one or more churches or church denominations, and requires that more than half of the members of the society be religious missionaries in foreign countries.

"THE NEED TO PROHIBIT NUCLEAR FUEL REPROCESSING"

HON. JONATHAN B. BINGHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. BINGHAM. Mr. Speaker, on March 21, 1977, I introduced H.R. 5234, the Plutonium Licensing Control Act. While an extensive statement on this bill can be found in Monday's RECORD at page 8227, I should like today to call my colleagues' attention to three related news articles regarding the reprocessing question. Two of these pieces are newspaper stories regarding Monday's release of a Ford Foundation study of all aspects of nuclear energy. On the specific question of reprocessing, the blue ribbon panel concluded as follows:

There is no compelling national interest to be served by reprocessing. There appears to be little, if any, economic incentive and it is unlikely that reprocessing and recycle could proceed without subsidy. The noneconomic benefits of reprocessing are small: fuel supply for LWRs would be little enhanced; present experience with reprocessing or plutonium stockpiles, has little present value since the introduction of breeders is sufficiently far in the future and uncertain; and contemporary waste management risks with reprocessing are likely larger than possible reductions in long-term hazards from disposal. Health hazards and new accident risks argue against reprocessing. But the most severe risks from reprocessing and recycle are the increased opportunities for the proliferation of national weapons capabilities and the terrorist danger associated with plutonium in the fuel cycle.

In these circumstances, we believe that reprocessing should be deferred indefinitely by the United States and no effort should be made to subsidize the completion or operation of existing facilities. The United States should work to reduce the cost and improve the availability of alternatives to reprocessing worldwide and seek to restrain separation and use of plutonium.

The third piece I wish to place in the RECORD is the lead editorial from this morning's Washington Post. This excellent statement concludes that that the Ford Foundation study was correct; plutonium reprocessing should be deferred indefinitely—at least well into the next century.

I commend these three articles to my colleagues' attention and urge them to join with me by cosponsoring the Plutonium Licensing Control Act:

[From the Washington Post, Mar. 22, 1977]

DEFER PLUTONIUM AS A-FUEL, U.S. URGED

(By Thomas O'Toole)

A panel of prestigious scientists recommended yesterday that the United States minimize the threat of nuclear weapons spread by putting off until the 21st century the use of plutonium and fast breeder power plants that burn plutonium as a nuclear fuel.

At the same time, the panel of 21 scientists urged that the United States continue to develop uranium and coal-fired power plants as the best ways to ensure an adequate supply of electricity for the rest of this century. The panel did not choose between nuclear and coal power, except to say that nuclear energy is cheaper and safer in some ways and coal is cheaper and safer in others.

"We see electrical energy coming from a mix of nuclear and coal for at least the next 20 years," said Spurgeon M. Keeny Jr., director of Washington operations for the Mitre Corp. and chairman of the panel financed by the Ford Foundation. There are social costs to nuclear power but it compares favorably economically and healthwise to coal, even when one considers the possibility of a nuclear accident."

Ford Foundation President McGeorge Bundy emphasized that the panelists who worked on the study for almost two years were deliberately chosen for their middle-of-the-road views on nuclear energy during the last six years of debates among scientists, utility officials, and the public over whether nuclear plants are safe and economical.

"We believed that the nuclear debates suffered from a shortage of dispassionate and disinterested analysis," Bundy said at a press conference held at the University Club. "So we went out and got people who were not sharply and publicly lined up on either side of the nuclear question.'

Eleven panelists are faculty members at Harvard University, Massachusetts Institute of Technology, Princeton University and Stanford Universtiy. Former Federal Energy Administrator John C. Sawhill served on the panel, as did Secretary of Defense Harold Brown and Deputy Under Secretary of State Joseph S. Nye in their former roles as president of Cal Tech and professor of government at Harvard, respectively.

All 21 panelists met yesterday afternoon with President Carter in the White House, a meeting that was said to signify Carter's approval of the panelists' conclusions and the double-spaced, 418-page report they turned over to him in the Oval Office.

"Their conclusions mesh very nicely with most of our conclusions," a key White House energy aide said yesterday. "There's very little question the country needs both coal and nuclear power to get away from scarce fuels like oil and natural gas for the next 20 years."

The panel identified as the most important issue on nuclear power whether to go ahead with the reprocessing of plutonium from spent nuclear fuel. The panel said plutonium can be used by other countries and by terrorists to make crude but workable atomic weapons.

"There is no compelling national interest to be served by reprocessing," the panel concluded. "There appears to be little if any economic incentive for reprocessing and the most severe risks are the increased opportunities for the proliferation of national weapons capabilities and the terrorist danger associated with plutonium."

The panel pointed out that the kind of uranium used in power plants can never be used to make weapons but that in five out of six cases each country making its first nuclear weapon did it with plutonium reprocessed from spent uranium fuel. Plutonium does not occur in nature. It is a by-product of uranium that has burned itself out making electricity.

To make sure plutonium is not spread around the world, the panel recommended "indefinite" deferral of plutonium recycling and of development of the fast breeder atomic power plant that would burn reprocessed plutonium to make still more plutonium.

If followed by the White House, both recommendations would serve to kill the $500 million plutonium reprocessing plant now under construction at Barnwell, S.C., and the $2 billion fast breeder demonstration plant now being built at Clinch River, Tenn.

An estimated $250 million has been spent by private industry on the Barnwell plant and $455 million of public and private funds on the Clinch River plant.

Despite the fact that Japan and Western Europe are developing their own fast breeders and plutonium reprocessing plants, the panel said its suggested policy is not isolationist.

"A breeder cannot operate without reprocessing, and reprocessing needs lots of breeders, maybe 20 to 50," said Dr. Richard L. Garwin of IBM's Thomas J. Watson Reserach Center at Yorktown Heights, N.Y. "Economically, the rest of the world would be better off without the breeder."

To move the world away from plutonium, the panel urged that the United States greatly expand the government-run factories that enrich uranium for power plants to make sure that foreign countries are assured uranium to make electricity for the next 30 years. There are three such factories.

"U.S. government policy should provide the entire world with a clear alternative to a plutonium economy," said panel chairman Keeny. "We should provide adequate enriched uranium to make other countries turn away from wanting their own enrichment facilities, which is another tempting way to make weapons."

The panel suggested that the United States keep research projects alive on plutonium recycling and the breeder "as insurance" against the day in the 21st century when the world begins to run out of cheap uranium. One way to do this, the panel said, is to bury the spent wastes of a nuclear plant together with its plutonium where it could be retrieved at a later date.

The report said the entire world can be supplied with adequate electricity for the next 30 years from coal and uranium, partly because the world's uranium reserves are underestimated.

Dr. Hans H. Landsberg, co-director of Resources for the Future said. "We think there is enough uranium to run the world's nuclear power plants well into the next century.

[From the New York Times, Mar. 22, 1977]

FORD PANEL URGES MAJOR POLICY SHIFT ON NUCLEAR POWER—CALLS FOR END TO BREEDER REACTOR PROGRAM AND A DELAY IN PLUTONIUM REPROCESSING

(By David Burnham)

WASHINGTON, March 21.—A panel of 21 scientists and economists today recommended major changes in the nuclear policy of the United States, including an indefinite postponement of plutonium reprocessing and the end of the cash program to build a commercial breeder reactor.

The panel, in making its negative recommendations on plutonium and the nation's major nuclear energy research project, said it had concluded that the most serious risk associated with nuclear power was that it would help an increasing number of nations arm themselves with atomic weapons.

The panel's study, undertaken with an $860,000 grant from the Ford Foundation, was made public while three teams within the Carter Administration continue to work on separate studies that touch on other aspects of nuclear energy.

ADMINISTRATION MEMBERS ON PANEL

Partly because the Ford Foundation panel included two top members of the Administration and partly because of previous comments of President Carter, the report's recommendations were widely seen as previewing what will probably be the Administration's own final positions on nuclear power.

For example, in a recent letter to Representative Tom Harkin, Democrat of Iowa, President Carter said flatly that "this Administration generally considers nuclear power a low-priority energy source and views the liquid metal fast breeder reactor as a potential security risk."

After a news conference this morning, members of the panel, headed by Spurgeon M. Keeny Jr., the director of Washington operations of the MITRE Corporation, met with President Carter at the White House and then briefed Congressional staff members at the Capitol.

The 418-page report, entitled "Nuclear Power Issues and Choices,' appeared to rest on two fundamental assumptions that somewhat contradict those held by the nuclear industry and by many energy experts in Congress and the Nixon and Ford Administrations.

The first key assumption is that conventional nuclear reactors, now generating about 10 percent of the electricity in the United States, will be about as expensive and dangerous to operate as electrical generating stations fired by coal.

For many years, nuclear proponents have argued that nuclear reactors would be substantially cheaper and have significantly fewer health consequences than coal-fueled stations.

The second key assumption of the study is that the current official estimates of uranium reserves and resources substantially underestimate the amount of uranium that will be available during the next two or three decades.

This assumption, disputed by some experts, is of major importance to the panel's recommendations to postpone plutonium recycling indefinitely and to slow the swift development of the breeder reactor because both new technologies have been held to be vital to the United States because of alleged potential shortages of uranium.

Plutonium recycling is a complex chemical process in which plutonium, a heavy grey metal rarely found in nature, and uranium are extracted from used reactor fuel so they can be re-used to fire reactors.

The breeder reactor is an experimental model that would be fueled with plutonium and which could, the engineers believe, be made to operate so that it would actually create more plutonium than it burns.

The study panel, whose members included Harold Brown, Secretary of Defense, and Joseph S. Nye Jr., deputy to the Undersecretary of Security Assistance in the State Department, argued that the importance of nuclear power to the United States had been considerably exaggerated.

"It is incorrect to argue that nuclear power is 'needed' now to allow society to continue its development as it is," the report said. "While nuclear power is one of the options that should be pursued, it is not as critical to future economic development as its advocates claim."

Concerning requirements of the next century, the panel said, "We believe that some mix of coal, solar, and fusion energy, assisted by conservation, would be capable of supplying society's long-term energy needs."

"But we also believe that the nuclear breeder will be competitive and is likely to prove eventually to be socially acceptable," the report continued. "Society does not have to act on these guesses today. Our children will be in a better position to worry about our grandchildren than we are."

The report was, however, far less easygoing about proliferation: "In our view, the most serious risk associated with nuclear power is the attendant increase in the number of countries that have access to technology, materials and facilities leading to a nuclear weapons capability," it said.

FEARS OF PROLIFERATION

"If widespread proliferation actually occurs, it will prove an extremely serious danger to United States security and to world peace and stability in general," the report added.

In an attempt to meet this hazard, the panel recommended a large number of different approaches, including intensive new diplomatic efforts to assure the rest of the world of adequate supplies of uranium for conventional reactors and of the United States policy decision to abandon the use of plutonium for at least the next few decades.

The United States has already invested more than $3.5 billion in general breeder research and in the planning and engineering of a demonstration commercial breeder reactor on the Clinch River in Tennessee.

If the Ford Foundation panel's recommendations are adopted by the Carter Administration, the big immediate losers would be the Clinch River Reactor—which so far has received $325 million from the government and $130 million from a consortium of private companies—and a reprocessing plant under construction in Barnwell, S.C., in which the Allied Chemical Corporation and General Atomic so far have invested about $200 million.

[From the Washington Post, Mar. 23, 1977]

JUDGMENT ON PLUTONIUM

The case for plutonium fuel and the breeder reactor has been growing steadily more dubious. With each re-examination, the risks become clearer and the benefits dimmer. The latest analysis, published this week by a research organization called the Mitre Corporation, is remarkable for its intelligence and balance. It deserves to be considered authoritative. It strongly urges the Carter administration to postpone plutonium fuel production "indefinitely" and to relegate the breeder technology to the laboratory as a standby for the middle of the next century. That judgment is unquestionably the right one.

The penalties for a mistake here would be monstrous. Plutonium is one of the most potent poisons ever devised and, in its fuel form, it can be fashioned into nuclear weapons relatively easily.

The technology is within the capacity of terrorist organizations as well as national governments of every kind. Putting the stuff into commercial use would be an irreversible decision.

Yet that is the direction in which U.S. policy has been heading, guided mainly by obsolete assumptions and blind momentum. A reprocessing plant for the manufacture of plutonium now stands, two-thirds completed, near the town of Barnwell, S.C., waiting for a federal policy on subsidies. A breeder reactor is under construction at Clinch River, Tenn., scheduled to go into operation in the early 1980s as a prototype for commercial plutonium-fueled reactors in the 1990s. The Mitre report is addressed primarily to President Carter and his energy advisers. If they follow its clear and forceful logic, they will abandon both of these projects.

The Mitre report is the work of a committee of 21 men who, collectively, know as much about these questions as anyone in the world. One member of the committee, Harold Brown, was president of the California Institute of Technology and is now Secretary of Defense. Another, Kenneth Arrow of Harvard, holds the Nobel Prize in economics. A third, Wolfgang Panofsky, is director of the Stanford Linear Accelerator Center. There's no need to run through the entire list. Their report has been published as a book, incidentally, by the Ballinger Co., under the title, "Nuclear Power Issues and Choices." But it covers a great deal more than nuclear issues alone—because, to get to the plutonium question, you first have to consider the future American economy, its requirements for energy and the various possible sources.

The nuclear reactors now being built by utilities around the country are fundamentally different from the plutonium breeder—and far less dangerous. The present commercial reactors are fueled with rods of uranium; when the fuel is spent, the fission process has left a residue of plutonium in the rod. But in that form, it's not explosive. It's the next step that takes the country over a new threshhold—the reprocessing procedure that refines the plutonium and mixes it into a new kind of fuel for the breeder, which, in turn, produces more plutonium than it consumes. It's this second fuel, the one that emerges from the reprocessing plant, that contains weapons-grade plutonium and presents truly extraordinary dangers.

The only conceivable reasons for resorting to the plutonium technology now would be either a looming shortage of uranium or the threat of energy prices so high that they could derail the nation's economic growth.

Plutonium recycling can be postponed indefinitely "at essentially no economic cost," the report finds. "The fears that energy scarcity will force fundamental changes in economic and social structures or the lifestyle of the industrialized world are not well founded."

The Mitre group, in other words, considered both possibilities and concluded that there was nothing to justify risking, in this century, the dire hazards of reliance on plutonium fuels.

TRIBUTE TO ST. BONAVENTURE TEAM

HON. WILLIAM F. WALSH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. WALSH. Mr. Speaker, when the reputation of eastern colleagiate basketball is at stake and when your alma mater has triumphed over adversity to reach the finals of the National Invitational Tournament, it is a drastic moment. But when the young coach of that team, St. Bonaventure University, is the son of one of your oldest friends and neighbors—in his own right, a great coach, too—then the drama is intensified even more.

I rise to pay tribute to the St. Bonaventure team—winners of the 1977 NIT, the very finest team in the East and quite possibly in the Nation; the team's outstanding junior star, Greg Sanders who was voted the tournament's most valuable player; and especially their fine coach, James Satalin.

Jim is the son of one the best-known and best-liked men in my city of Syracuse, N.Y., Frank Satalin, and his late wife, Loretta. She was a lovely woman and Frank is a wonderful man, and their children—who grew up with my own—were and are worthy of the fine upbringing they received.

Both Jim and his older brother Frank, Jr., played basketball for their father at St. John the Baptist Academy and excelled—as have so many others—from his teaching and coaching skill. Both went on to basketball stardom at my alma mater of St. Bonaventure, and Jim stayed on to assume the responsibilities as head coach.

What a job he and his players have done. All Bonaventure people are proud of them, but none are prouder than those of us from Syracuse.

THE HUMPHREY CREDO

HON. MORRIS K. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. UDALL. Mr. Speaker, each generation produces only a few really great and special people—men and women who have the ability and the opportunity to influence for the good of their Nation and the world.

HUBERT HUMPHREY is such a man. For three decades, he has been on the cutting edge of social and political and economic progress. He possesses perhaps the keenest mind and strongest constitution and biggest heart in American public life. He is the foremost advocate of full employment legislation, and that is appropriate, because he is probably the most fully employed man I know.

Recently, a group of his friends from all parts of the country and all walks of life paid tribute to this giant of our times. I had the honor of being master of ceremonies that night, and I got to hear the gentleman from Minnesota spell out his credo in moving, inspirational terms.

I would like to share those remarks with my colleagues:

OUTLINE OF REMARKS OF SENATOR HUBERT H. HUMPHREY

WASHINGTON, D.C.,
March 16, 1977.

Adlai Stevenson once said that the praise of an evening like this couldn't harm you . . . if you didn't inhale. I think this was one case where Adlai was wrong. I have breathed deeply and I like it. It is good for your health and even better for your spirit.

It has filled my heart and . . . loosened my tongue. I suppose I should really just say thank you, thank you from the bottom of my heart and then sit down.

It is an impulse I have had before—not often, I'll admit—but I almost always have been able to overcome it. And tonight, being among so many old friends, I can only say, "Sit back, I have a thousand ways to say thank you." But don't worry, I'm not going to use them all.

First, let me thank Murray Finley and Coretta Scott King for this marvelous tribute. I am moved and deeply grateful to both of you.

Second, let me thank Mo Udall, the congressional answer to Bob Hope, for being here. He not only is the tallest comedian on Capitol Hill, but the wisest one, too. He has raised the intellectual level of congressional debate and presidential politics. It has been one of my special pleasures to work with Mo through the years—on legislation, on politics—on matters of great importance to all our citizens, but particularly to the working people of this country.

I have said before, and I am delighted to say again tonight, that my own political life could not have been productive without the support, counsel and friendship of organized

labor. So it is with special appreciation that I thank you, Lane Kirkland, and my other labor friends with whom I have worked on interests through the years. If we have not always agreed, we have, nevertheless, been friends and we shall remain so.

A special thanks, too, to all of my friends in the business community who are with us tonight. We are grateful for the splendid cooperation in helping to reduce this terrible burden of unemployment.

And now to my friend, Fritz Mondale, Vice President of the United States, I have some words of advice and frankly some words of apprehension.

I have watched while the President has eliminated a number of things which have come to be known as parts of an Imperial Presidency. I applaud those actions.

What I am worried about now is the Imperial Vice President.

When you go overseas, you leave early, with ceremony and the President embracing you. You make the evening news. I used to leave after midnight, with no one from the press in sight

You go to Paris and Rome and Tokyo and London. I went to countries whose per capita income was under $200 per year.

I became an expert on hotels built by colonial powers in the nineteenth century. You have been seen smoking long Cuban cigars in elegant continental hotels.

I even have been told that when you come home to the Rockefeller-Mondale Mansion, Joan and Teddy and Eleanor and William hum a couple of bars of Ruffles and Flourishes.

When I used to get home to my humble apartment, Muriel greeted me, too. But all she ever said was, "Why are you late, Hubert."

I would not want you to feel that I am jealous. I am simply incredibly, totally, constantly envious. That's all.

Fritz, you know, seriously, how pleased I am to have you here tonight. Our friendship and association go back many years. I have had no better friend, no more constant colleague. You already have brought honor and distinction to yourself, our country, our State, the Senate of the United States and now to the office of the Vice Presidency.

Dore Schary, you and I have shared so many good times. It is a special pleasure to have you here expending your talents saying nice things about my life. You have been in the forefront for liberalism and decency in this country. You have been an exemplary public servant without being elected to office. I am pleased to be with you again tonight.

And to Lynda Robb, my son Skip, Jonas Salk, Averill Harriman, Mayor Gibson, Governor Shapp, Ed Muskie, Sargent Shriver and Lorne Greene, thank you all for your kind words. Each of you has been important in my life.

Three quotations provide a pretty good idea of why I ended up spending a lifetime in the political arena.

James Madison, one of the Founding Fathers, was on the right track when he wrote in the Federalist Papers: "What is government itself but the greatest of all reflections on human nature? If men were angels, no government would be necessary."

Franklin D. Roosevelt spelled out what I always have believed to be a high purpose of the national government. He said: "The test of our progress is not whether we add to the abundance of those who have too much; it is whether we provide for those who have too little."

And finally, Adlai Stevenson reminded us that Democratic self-government never could be achieved easily or without sacrifice.

He wrote: "Democracy is not self-executing. We have to make it work, and to make it work we have to understand it . . . Democracy's need for wisdom will remain as perennial as its need for liberty . . . unending self-examination must be the perennial price of liberty because the work of self-government never ceases."

These three great American political leaders capture the principles which I always have attempted to follow:

First, government must play a major role in our quest for a just and open society. Government is not to be feared. Rather, it is to be molded into a responsive servant of all peoples.

Second, government bears a special responsibility to help the less fortunate and down-trodden among us. Governmental action sometimes is needed to secure legal and constitutional rights, such as during the civil rights struggles of the 1940's, 1950's, and 1960's.

At other times, the government must act to secure peoples' economic rights. Now is such a time. That is why I have been leading the fight to provide jobs, decent jobs, hopefully private sector jobs, for every American who is able and willing to work.

Finally, Government's efforts to achieve these goals are bound, at times, to be halting, partial, and unsatisfactory, by the very nature of the undertaking. Nothing comes quickly or easily. Many times, progress is difficult to measure.

So the real test of public service is whether you are willing to continue the struggle—to accept the defeat and press on with the job; and to welcome the victories, but use them as opportunities to work on the even more difficult jobs that lie ahead.

People often have called me an optimistic, as though that were not permitted of public officials. One should, of course, strive to avoid the blind, misplaced optimism of those who simply turn away from difficulties, hoping that, in the end, something will turn up.

But that is not the optimism in which I believe. I have seen enough to know that Madison, Roosevelt and Stevenson were right. Perseverance in the cause of democratic government can touch the lives of all people, even "those who have too little." The barriers of injustice and inequality can be pushed back. People can be given a chance to lead lives of happiness and dignity. We've seen it happen in our lifetime, and it is happening today.

So, amid the shortfalls and disappointments, I am one who continues to believe that the struggle is worth it. And the magnificient thing about America is that millions of our people share this belief. They ask only that their leaders' faith be as steadfast as their own.

In the years ahead, we must all keep the faith with our people as we reach out to achieve the dream of "life, liberty and the pursuit of happiness" for every last one of our citizens.

WHY SOUTH DAKOTA OBJECTS

HON. JAMES ABDNOR

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. ABDNOR. Mr. Speaker, South Dakotans, with their constitutionally mandated balanced State budget, have had little problem in understanding why New York City's fiscal difficulties have been so hard to resolve. We know that you cannot get something for nothing forever, a lesson which seems to have been lost on the directors of the Big Apple's finances.

This week, L. J. "Bud" Maher editorialized some good advice for our urban neighbors in the Huron Daily Plainsman:

COLLECT FINES FIRST

If New York City ever gets its financial act together, it might be because city officials learn to talk to one another. Almost at the same moment when Mayor Beame was pleading for a new $225 million loan from Washington to pay salaries and debt obligations, his comptroller revealed the city has $519 million in unpaid traffic tickets.

Even discounting the $79 million worth deemed uncollectible, the Big Apple need look no farther than its own motorists for the sustenance it needs at this time.

MR. HUNTSVILLE, ALABAMA

HON. WALTER FLOWERS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. FLOWERS. Mr. Speaker, today is Dr. Wernher von Braun's 65th birthday and represents a time to pause and recall his successes.

Few men have been honored in their lifetimes with more awards than Dr. von Braun. His record of accomplishment has made him one of the most admired men of this generation. Throughout his years in Huntsville, where he lived during the period of America's entry into the space age, his efforts and successes in space exploration made Huntsville famous. The city showed its appreciation in many ways, one of which was to award him its "Citation of Appreciation as Outstanding Citizen and Public Servant, City of Huntsville, Ala."

Dr. von Braun's contribution to the national space effort provided the leadership the Nation needed to meet an intense schedule that included launching our first artificial satellite and our placing a man on the Moon and returning him safely.

He is a national hero with a record of accomplishing the seemingly impossible. Dr. von Braun is remembered and applauded in Alabama for his contributions to his country in its race to catch up and forge ahead in space exploration. We are grateful that he lived in our State during this eventful time of his remarkable career.

Parallel with his national accomplishments, this scholar-engineer-manager devoted hours of his time to civic activities in Huntsville. He helped establish the Alabama Space and Rocket Center, extended a helping hand for our youth, attended PTA meetings, founded the Rocket City Astronomical Laboratory, saw the city grow with space oriented industry, devoted time to improving the city's public library and was instrumental in establishing the Research Institute whose research programs are now a part of the University of Alabama.

While these are only a few of Dr. von Braun's local contributions, it is only fitting for them to be remembered on this special day. And it is only fitting to remember that as Dr. von Braun's career developed, he also maintained an

interest in a variety of spare time interests and hobbies—reading, amateur astronomy, sailing, hunting, soaring and flying. Over the years, he consistently maintained and developed them all.

Education has always been one of Dr. von Braun's strongest interests and one to which he devoted much of his personal time. His view was and is that when we neglect education, we risk the future freedom of the world. He is an educated man and made a large contribution to improving our Nation's educational system. His lifework has been for the betterment of mankind and he is the perfect example of what a dedicated, unselfish, educated person can accomplish within a short period of time.

I offer my congratulations to Dr. von Braun for his great successes for the Nation, for Huntsville and for Alabama. I know that his birthday will be remembered everywhere and I offer my best wishes on this important occasion.

THE ENERGY CRISIS: STUDENTS ASK CONGRESS WHY NO ACTION?

HON. BENJAMIN A. GILMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. GILMAN. Mr. Speaker, this past winter once again stressed the need for a feasible national energy program—a program that is long overdue.

Orange, Rockland, and Ulster Counties in my 26th Congressional District of New York were impacted by a lack of energy reserves. The suffering and inconvenience caused by the severe, cold winter will long be remembered.

In the northern reaches of Orange County in Pine Bush, N.Y., ninth grade students of Crispell Middle School have taken steps to find out "just why we do not have any solutions to the energy crisis." Last Saturday (March 12) I met with six of those students and their teacher, Allen Warner, who presented me with a letter and petition signed by 138 Pine Bush area residents asking for congressional energy action.

I commend the Crispell School ninth grade class for undertaking this initiative in this valuable learning experience. These students have just withstood one of the most trying winters in memory, as bad as any of their ancestors had to bear. They now know what a crisis is—they seek action—they are deserving of some answers.

So that my colleagues can share the concern of these students, Mr. Speaker, I request publication at this point in the RECORD the context of the letter presented me by James Weiner, Joanne Flynn, Robert Gibbs, Carol Jean Bull, Barbara Brack, and Ann McNulty:

MARCH 4, 1977.

The Honorable BENJAMIN A. GILMAN,
The House of Representatives,
Washington, D.C.

DEAR MR. GILMAN: We, the ninth grade class of the Crispell Middle School, Pine Bush Central School System, would like to bring to your attention our feelings on the lack of action the U.S. Congress has shown in solving the energy crisis.

The energy situation has badly affected the American people in many ways. People have died from the cold and lack of heat. For example, Pinkey Carson, 66, and Herman Jackson, 62, were frozen to death in unheated rooms in a New York City residential hotel. Another way in which the energy crisis is hurting the American people is through the great rise in unemployment. The jobless rate has risen by over 1.5 million people and includes many people who have been out of work because factories did not have sufficient supplies of natural gas to remain open. Another problem, which many people do not consider major, is the worry that people have about losing their jobs or being able to heat their homes through the harsh winter. There has been a 7% increase in the amount of suicide victims and a 4% increase in the amount of nervous breakdowns in the past three months.

The economy has also been affected greatly by the energy crisis. Since there is no output because factories are closed, the cost of what is left to sell on the market goes up. Because people are out of work, they obviously have little money to buy these products and the nation is at a standstill of living. People do not have enough money for entertainment, such as restaurants and movie houses. These places close down and more people are out of work. This starts a never ending chain of events which compounds the initial problem.

Some people think that this energy crisis has been contrived. There is very little factual information to back this up. To date the only clear fact is that Texas was holding back natural gas until the decontrolling bill was passed. But, even if pipelines were open, there is still a small amount that can be piped. It is definitely clear that there is an energy crisis. We want to know why something has not been done before it got this far.

An article in the Feb. 7, 1977 edition of Newsweek helps explain the situation. It states: "Everything went smoothly enough until the late 1960's, but then soaring demand began to exceed new supply. Federal Power Commission Chairman John Nassikas warned in 1969 the 'Natural gas supplies are diminishing to critical levels.' Domestic production began falling in 1973 and the industry accelerated the depletion of its proven reserves. Even though the last three winters were mild, the pipeline industries were forced to curtail deliveries to industries with firm contracts in some cases cutting them off completely. 'The trend is decreasing supplies, dwindling reserves and declining exploration,' says David Foster, Executive Vice-President of the Natural Gas Supply Committee,' a Washington Lobbyist group."

Based on this article and another which appeared in Time on January 31, 1977, you can clearly see that an energy crisis could be definitely foreseen, and action to prevent the oncoming crisis could have been taken. We want an answer why this was not done. You have had since 1969 to do something and yet it had to come to two crises before something started to happen. You can also see that our known recoverable resources were dwindling.

We would like to know why:

(1) Research to find more natural gas, or,

(2) Research and development of a substitute for natural gas, or both, were not done.

We young people and our parents can conserve and cut down the amount we use, but there is going to come a time when there just won't be any natural gas left. We want something done before it gets that far.

Help might come from other nations, but experts say they expect virtually no help before 1990 and by then the gas production is estimated to have diminished to less than 15 trillion cubic feet which even though it sounds like a big number is very small for the entire nation. The amount of gas other nations could give us would only come to a mere 1.1 trillion cubic feet. Also, experts do not think that there are any large gas fields just waiting to be discovered. "There is still gas to find," says John McDonnell, a vice-president for marketing of Gulf Oil, "but we can't expect any of the bonanzas of the past."

According to that same article in *Newsweek*, "in the end, it is clear that the nation will just have to make do with less gas—which may mean allocating the available fuel to users that have no suitable alternative and switching everyone else to coal or electricity or solar power. More immediately, the Carter Administration is stressing conservation of all energy. And once the emergency allocation legislation clears Congress, it is likely the President will push for at least partial deregulation of gas prices; but unless the nation learns more from the current gas crisis than it did from the oil crunch of 1973–74, the outlook is not very hopeful."

Again we ask why has the United States Congress been dragging its feet when it comes to enacting any effective energy plan?

Very truly yours,

JAMES WEINER,
Representative, Ninth Grade Class
Crispell School.

GEORGIA HOUSE OF REPRESENTATIVES SUPPORTS REPUBLIC OF CHINA

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. McDONALD. Mr. Speaker, as in several years past, the Georgia House of Representatives has again gone on record in support of continued relations with the Republic of China, and the maintenance of our Mutual Defense Treaty with that nation. The resolution, which was read and adopted on March 7, 1977 points out the importance of Free China to the United States and I commend it to the attention of my colleagues. The text of the resolution follows:

RESOLUTION

Urging the Government of the United States to maintain its diplomatic relations and the Mutual Defense Treaty with the Republic of China; and for other purposes

Whereas, the Republic of China was a founding member of the United Nations and has always been a law abiding member of the community of nations; and

Whereas, the people of the Republic of China have built a successful, prosperous, free economy out of the ashes of a half century of revolution, invasion and civil war and now serve as an important trading partner of the American people; and

Whereas, the Republic of China is of great strategic importance in the defense of East Asia and the Pacific and has always utilized its military power in the interests of the free world; and

Whereas, the people of the Republic of China have been among the most trusted friends and allies of the people of the United States since the founding of the Chinese Republic in 1912; and

Whereas, President Jimmy Carter has repeatedly stated that he will pursue an open and just foreign policy, based on morality; and

Whereas, President Jimmy Carter has also repeatedly stated that he will not compromise the freedom and security of the people of the Republic of China and will stand by the U.S. commitments to that country.

Now, therefore, be it resolved by the House of Representatives that this Body strongly endorses the positions of President Jimmy Carter as stated above.

Be it further resolved that the Government of the United States and the Congress is hereby strongly urged to maintain its diplomatic relations and the Mutual Defense Treaty with the Republic of China.

Be it further resolved that the Clerk of the House of Representatives is hereby authorized and directed to transmit an appropriate copy of this Resolution to the President and the Secretary of State of the United States of America, the members of Congress from the State of Georgia and the Ambassador of the Republic of China to the United States.

TIGHTENING THE REINS OF GOVERNMENT AT THE TOP

HON. HERBERT E. HARRIS II

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. HARRIS. Mr. Speaker, I am introducing today, with my distinguished colleague, Mr. UDALL, legislation to bring some order to the topsy-turvy growth at the top levels of Government. This bill will help end unplanned, erratic growth of high-level positions in our Federal agencies.

NO CONTROLS EXIST

The problem is simply this: There is no real central control over how top positions in Federal agencies are created—not in the Congress, the White House or the Civil Service Commission The result has been a random mushrooming of top slots in practically every agency, with little forethought, coordination, or planning. Fundamentals of Government organization and sound personnel principles have been ignored as top positions have popped up in disparate fashion.

Currently, high-level jobs and salaries in the Federal Government are of two types. First are the executive level positions. These are the 600 or so political appointees, like the Cabinet Secretaries and their assistants, the chief administrators of agencies like the VA or GSA, and general counsels of departments. The second group is known as "supergrades"—grades 16, 17, and 18 of the general schedule. Examples of supergrade positions are certain bureau directors and their deputies, directors of regional offices, heads of congressional relations offices and personnel directors.

Executive level positions are created by Congress and signed into law by the President. For example, last year Congress sent to the President a bill that added a new Assistant Secretary in the Department of Agriculture. That bill also renamed the Under Secretary position "Deputy," upping the salary level from III to II and it elevated the Administrator of the Animal and Plant Inspection Service from GS–18 to executive level V.

The various congressional committees also often write into their legislation executive level and supergrade positions to carry out the law or program authorized by the main purposes of the bill. For example, in the Small Business Act amendments—H.R. 692—legislation with the primary goal of increasing loan and bond guarantee authority, the House included a provision adding a new executive level V position in SBA, an Associate Administrator. All executive-level positions are specifically enumerated by title and level in title 5 of the United States Code.

Supergrade positions come into existence somewhat differently. Congress originally created a supergrade pool controlled by a numerical lid with responsibility for the pool centralized in the Civil Service Commission, the President's "personnel director." From this pool, the Commission has allotted supergrade slots to the various agencies. The problem is that, over the years, Congress has actually circumvented the pool by writing into law additional mechanisms that allow the Civil Service Commission and other agencies to ignore the fixed limits of the pool and create additional supergrade positions.

Thus, supergrade jobs are added by agencies, irrespective of the parameters of the pool. For example, the Secretary of Defense and the Attorney General, under current law, can create supergrade positions on top of those allotted to their departments from the central pool. Similarly, the Director of the FBI can add up to 110 supergrade positions over and above those the FBI "gets" from the pool. The Secretary of Agriculture can add five supergrade hoof-and-mouth specialists to his top management team.

It is time to bring some order to the top layer of Government. This is why I have joined Congressman UDALL in cosponsoring this legislation. There is a need for somebody, some agency at the top to take charge of the supergrade sprawl.

Congress is as much the culprit as are the agencies. The substantive committees often feel, and justifiably, that, when they create a new Federal program or write a new law, they need to create top positions to administer the law. However, sometimes the creation of positions at particular salary levels can result from other motivations. One department may want a sixth assistant secretary because another department has six. Or creating an executive-level slot may be a reward to an individual or a group. An assistant secretary for animal protection or overseas marketing may or may not be justified. That is not the point. The point is that the creation of any top position should be considered in light of the total structure of Government and public need; it should not be established in a vacuum or from any single-interest point of view. Likewise, supergrade positions need coordination and direction at the top. The Civil Service Commission should be in charge of all the supergrade positions and how they are divvied up among the various agencies. Supergrade positions should not be allowed to just pop up like spring crocuses. Nor should they be "manufactured" to accommodate any one individual to respond to political motivations or popular fads.

STEMMING SUPERGRADE SPRAWL

This bill makes two basic changes. First, to deal with executive-level jobs, the bill would reaffirm the House rule that any legislation dealing with the Federal civil service would be referred to the House Post Office and Civil Service Committee; this currently is the committee's responsibility. The committee—as the personnel watchdog for the Congress—should judge the need for additional positions.

Second, the bill would establish a central "pool" with a limit of no more than 5,915 positions. Within this numerical, statutory limit, the Commission could then assign the positions to the various Government agencies. And most importantly, the bill repeals all the current "loophole" laws that permit agencies to create their own positions outside the pool.

The bill has several other provisions that deserve brief attention. It does not mandate the establishment of any supergrade positions. It provides that there will be no more than 5,915. It sets a limit. Also, the establishment of any supergrade positions by the Commission would require a majority vote of the Civil Service Commissioners. Therefore, the chairman could not unilaterally create a new position, nor could he or she delegate that to the staff of the Commission.

The bill does allow the Commission limited flexibility to go outside the official supergrade pool if unique circumstances dictate it. A majority of the Commissioners could create special scientific and professional positions within a limit of 1,238. There are sometimes special circumstances which require the Government to hire individuals with rare specialties. For example, sometimes NASA needs a physicist or the Geological Survey a seismologist or the Public Health Service a pediatric anesthesiologist. If in this situation the agency were limited by the lid, there would be a way to hire this highly specialized, hard-to-find individual. The Commission could establish a supergrade position to accommodate this unique need.

The bill does not eliminate any current jobs. It does place a strict limit on the total number of jobs in a meaningful way. It removes from the law loopholes that have allowed unbridled Government growth at the top. Additionally, it protects individuals currently holding the affected jobs. No person would be removed nor any job modified until the individual were no longer holding the job.

Mr. Speaker, I believe this bill represents a sound approach to Government. We have been fooling ourselves too long thinking there is someone calling the shots at the top. In reality, the situation has been a series of disparate acts, in which we the Congress have been a partner. Government can be rational, orderly, and responsive. This legislation would be an important step toward that end.

ON HUMAN RIGHTS

HON. GEORGE M. O'BRIEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. O'BRIEN. Mr. Speaker, I am a sponsor of a resolution identical to the resolution in opposition to harassment

of Soviet Jews and other minorities that was before us yesterday.

I think I am aware of the hazards the Congress and the administration face in pushing vigorously for a human rights policy. But I think a firm and unbending commitment to human rights is the most valuable thing America has to offer the world. Certainly, our commitment to human rights is more valuable than diplomatic accommodations that sacrifice human dignity in favor of political expediency.

Mr. Speaker, if a commitment to universal human rights jeopardizes some political deal desired by the State Department, so much the better.

For too long, America has been bashful about the rights we maintain. We often have presented our face to the world as merely the masters of a great engine of worldly goods. We have substituted a standard of living for a commitment to freedom.

It is my hope that in some small way today we can start to redress a balance in the world. Successful, yes, come share our success, but not success at any cost. We still hold certain truths to be self-evident.

NEW YORKERS MARK ITALIAN CULTURE WEEK

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. BIAGGI. Mr. Speaker, I wish to advise my colleagues that this week is the official celebration of Italian Culture Week in the State of New York. It is an occasion when the many and varied past and present contributions of Italo-Americans to the American cause are noted.

America as a pluralist society has provided the opportunities for all of its various ethnic religious and racial groups to contribute to the betterment of the Nation. Italo-Americans have contributed throughout and their impact is felt in virtually every facet of our society from the arts to the sports area, from the stage to the stock exchange. I am proud to be an Italo-American and look forward to participating in some of the ceremonies associated with Italian Culture Week.

At this point in the RECORD, I wish to insert the official proclamation issued by the Governor of the State of New York, Hon. Hugh Carey, declaring the week of March 18–24 as Italian Culture Week in the State of New York:

PROCLAMATION

America has benefited in its 200 years of independence from the contributions of those from Italy.

Those who came to America seeking a better life brought with them their customs and their culture. They provided a unique and a vital heritage that has enriched their neighbors.

As we celebrate our bicentennial, it is appropriate to recognize the Italian culture and the culture of other nations that contributed to the greatness of our country. Italian culture has brought understanding, a spirit of joy, and a rich tradition of music and art.

Now, therefore, I, Hugh L. Carey, Governor of the State of New York, do hereby proclaim the week of March 18–24, 1977, as "ITALIAN CULTURE WEEK" in New York State.

THE RETIRED SENIOR VOLUNTEER PROGRAM

HON. CHARLES B. RANGEL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. RANGEL. Mr. Speaker, many of our retired senior citizens are helping others lead a more meaningful and complete life through their efforts on behalf of RSVP, the retired senior volunteer program.

This nationwide service brings together volunteers representing a broad variety of skills and abilities with schools, hospitals, and other community organizations. With over 700 chapters and nearly 200,000 volunteers, RSVP reaches out into our society with the years-taught talents of our senior citizens providing needed assistance in areas like home improvement, income tax, and even broadcasting.

I would like to commend this worthy organization for the fine job it is doing and offer encouragement for their future endeavors. The following article, taken from Encore American and Worldwide News, details RSVP in an enlightening and informative way that I think my colleagues will find very interesting. The article follows:

RSVP RESPONDS TO THE COMMUNITY

Harold Taylor, who is sightless, once sang bass in the Hall Johnson choir; sang in the Hot Mikado at the 1936 World's Fair; and was part of a vaudeville act at the Harlem Cotton Club. At 75, he's still performing; he's part of a volunteer choral group from the A. Philip Randolph Senior Center in Harlem.

One of the choir's regular engagements is a monthly show for patients at the Meyer-Manhattan Psychiatric Hospital. "The patients there are mostly from Harlem and naturally all of us singers are from there," says Taylor, "So the patients realize we haven't forgotten them.

"Although I've lost my sight, I have not lost my heart," he adds. "I am quite willing and able to help others."

Taylor is one of some 200,000 volunteers serving with RSVP (Retired Senior Volunteer Program), a nationwide program for retired volunteers aged 65 or older. The program is administered by the federal agency ACTION, the grouping of volunteer agencies that includes the Peace Corps, VISTA, and Foster Grandparents. RSVP is sponsored locally by nonprofit private or public community organizations such as the Council for Human Services in Harrisburg, Pa., or the Community Service Society in New York. Funds to operate the service are provided jointly by ACTION and the local sponsor.

RSVP in New York City is the largest of the RSVP programs (by Sept. 30 of last year more than 5,000 volunteers were serving in 195 New York-area agencies), but there are more than 700 local RSVP programs throughout the country. RSVP does not offer a service program of its own; instead, the organization brings together volunteers representing a variety of skills and interests with eligible community organizations such as hospitals, schools, day care centers, family courts, nursing homes, libraries, and museums.

Among the Harrisburg programs available through RSVP:

Tax Assistance Volunteers assist older persons in completing real estate tax and rent rebate applications. In 1974 two volunteers—Sam and Peg Graeff—personally completed more than 1200 of these applications, gaining for the applicants more than $140,000 in rebates provided by law from the Pennsylvania state lottery funds.

Broadcasting Local radio station WMSP–FM offers a course leading to a third-class FCC license; volunteers also assist with office duties in the station and may help various community groups in preparing radio spots or programming.

"Spice of Life" Short-term assignments that make up the Spice of Life program might include manning a fair booth, counting funds for a service group's financial campaign, hosting a meeting for a charity organization, or helping a church launch its first newletter.

"Castle Guards" Property owners and renters who want to improve or repair their homes might learn the necessary skills from RSVP volunteers in this church-sponsored program.

Flower arranging Funeral homes provide large flower arrangements which volunteers rearrange into smaller bouquets for persons in hospitals or nursing homes.

Other volunteers might serve as receptionists or office assistants for service organizations; help with record-keeping in a nursing home; tutor children or adults in reading skills; prepare mailings for organizations such as the American Cancer Society; visit with hospitalized children; assist recreational therapists in a local hospital; provide bus route information or escort services to other community members; or help a health center in providing preventive dental care information.

Representatives emphasize that RSVP is not meant to be a "make-work" program for older persons; instead, they say, it provides a way for older volunteers to offer a needed service to their community, a service enhanced by the skills and human understanding developed in a lifetime of experience.

The only requirements for volunteers is that they be 65 or older and retired or semi-retired; no special education or skills are necessary. Generally volunteers come from previously established groups, such as senior centers and churches, but individuals may also serve with RSVP. Most volunteers work a few hours a week on a regular basis; some assignments take more time, and volunteers may work on more than one assignment. A few volunteers are residents of nursing homes who may assist by helping less able residents of the home, by knitting or sewing for outside organizations, or by assembling word game kits used by school volunteers teaching children to read.

RSVP provides free accident insurance to volunteers, reimburses out-of-pocket expenses when requested, and assists in arranging meals and transportation for volunteers. Recognition for volunteers comes from appreciation programs organized by some local chapters or through RSVP publications such as the Harrisburg newsletter *In Action*.

THE FDA AND THE SACCHARIN BAN

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. OTTINGER. Mr. Speaker, as a member of the House Commerce Committee's Subcommittee on Health and

the Environment, which has just completed 2 days of oversight hearings on the recently announced FDA ban on saccharin, I am distressed at the amount of misinformation that is being circulated on this subject.

Though no one feels more strongly than I do that the FDA often fails in its responsibility to the public, this is one time that I have applauded the agency for its actions. Statistics show that one out of every five Americans will contract some form of cancer. More than 350,000 people will die of the disease in this country this year. The Canadian tests which led to the U.S. ban were conducted according to well-established and accepted scientific techniques. The data that they yield are very significant for human beings consuming saccharin in reasonable amounts. Yet the FDA has been ridiculed by the press and industry, who seem to refuse to look at the scientific basis for the agency's decision. I'm sure the outcry would be just as strong, or perhaps even stronger, if the Government did not take action to protect Americans from environmental and chemical causes of cancer, which account for as much as 90 percent of cancers occurring in human beings.

On Sunday, there was a very good article in the New York Times which helps to explain in a clear and concise manner the reasons why FDA concluded that a ban on saccharin is warranted at this time. I am including it for the benefit of those who may wish to learn more about the nature of the testing that led to the ban and the reasons why these tests relate so strongly to the human population. I hope that this material will help to dispel some of the myths that are being spread by well-intentioned persons who simply have not looked at this issue from the scientific point of view.

Two points about the Canadian tests are particularly significant. The first is that they rule out the presence of an impurity in saccharin known as OTS—ortho-toluensulfonamide—as the cause of the malignant tumors produced in the animals used. The second is that the incidence of malignant tumors in the offspring of the test animals—rats that were exposed "in utero" to saccharin—was significantly higher than in the parent animals. Tests performed in the United States in 1971 and 1973 which showed similar results, but where OTS was not ruled out as the actual carcinogen, may now become significant because they tend to back up the theory that the fetus is highly susceptible to carcinogenic substances. This immediately brings to mind the tragic case of DES, where the daughters of women who took the drug were those who suffered the consequences.

Mr. Speaker, I hope that many Americans will take the time to review the background of FDA's decision and recognize the very real threat that saccharin may pose to health. Since cancer is an irreversible disease, prevention becomes of paramount importance. I hope that we will not act hastily to block the war on cancer by actions to hinder FDA's ability to remove from the market products that show strong evidence of being carcinogenic, particularly when the risks so outweigh the benefits. I will continue to look for and compile information on this topic for dissemination to my colleagues in the House:

[From the New York Times, Mar. 20, 1977]

FOR THE SACCHARIN BAN

(By Charles F. Wurster)

STONY BROOK, N.Y.—If society is to make progress in preventing cancer, then the Food and Drug Administration should be commended, not condemned, for banning saccharin.

Yet the F.D.A. has been attacked by allegations that the ban is unscientific, emotional, absurd and an irrational overreaction. It is none of these. Criticism approaching hysteria has been directed not at the hazard of cancer but at those who would protect us from it, and even at the law they upheld.

The assertion that saccharin has been safely used for decades without harm to humans is misleading. Although we know that most cancers are caused by environmental factors, we can identify only a small number of human carcinogens (cancer-causing substances). The exact cause of the overwhelming majority of cancers remains unknown.

Tumors do not come with labels naming the chemical that initiated carcinogenesis (cancer development) decades ago. More than 350,000 people die of cancer in this country annually. Saccharin could be causing thousands of cancers, yet we have no way of knowing it.

Chemicals cannot be tested for cancer-causing potential in human subjects. Such tests would require many thousands of people and take up to 40 years, followed by sacrifice, dissection and a search for tumors. With other carcinogens in the environment and cancer already present in our test group, this absurd, morally offensive and uncontrolled experiment would yield results difficult or impossible to interpret. Laboratory animals, usually mice or rats, are normally substituted for people. They yield meaningful results proved highly relevant to the human experience.

In the human population, very large numbers of people are exposed to low doses of chemicals, but the impact of seemingly low doses of a carcinogen may not be low at all. Exposure of 200 million Americans to doses that cause one cancer in every 10,000 people, for example, would result in 20,000 cancers—clearly a public-health disaster.

To detect the effect of low doses of a chemical that causes one tumor in every 10,000 exposed rats would require using hundreds of thousands of rats. Such vast experiments would be unwieldly and prohibitively expensive. But a dose 5,000 times higher is likely to cause cancer in about 5,000 of every 10,000 rats, or 50 percent of them. Administration of high dosages permits the cancer-causing effect to be readily apparent in a practical, manageable number of animals (30 to 50). The technique is routinely used in carcinogenic tests.

Statements that humans would need to drink 800 diet soft drinks or chew 6,700 wads of bubble gum daily to equal the saccharin dosage received by the rats are interesting anecdotes, but are totally irrelevant and without scientific credence.

Furthermore, the argument that anything can cause cancer if given in large enough doses is false. High doses of normally safe chemicals may be toxic, but they will not cause tumors. Relatively few chemicals cause cancer, even when fed at the highest possible doses.

We also hear that small amounts of a chemical are safe for man, even though large doses cause cancer in animals. There is not a shred of evidence for this argument. No safe threshold has been identified for any cancer-causing chemical. Furthermore, man may be hundreds of times more or less sensitive than rats or mice. It is therefore invalid to argue from animal data that the risk to man is small; it may be just the opposite. The price of this invalid extrapolation could be thousands of lives.

Cancer causation by a chemical at any dosage in laboratory animals is a warning of hazard to man. The absence of cancer in another strain or species does not prove the chemical safe; positive evidence is not nullified by negative evidence. A test of saccharin yielding no cancer in monkeys does not eliminate the danger to man indicated by cancer in rats.

We ignore cancer-causation in animals at our peril. The Delaney amendment to the Food, Drug and Cosmetic Act in 1958 (named for Representative James J. Delaney of Queens) recognizes this fact, and is an essential law for our protection. The amendment states that the F.D.A. must bar from the market any food additive found to cause cancer in human or animal. It wisely allows no human discretion based on dosage in administering the Act, since there is no valid scientific basis for such discretion.

We should support the F.D.A. when it upholds this law—in banning saccharin, it invoked the Delaney clause because the artificial sweetener had been found to cause malignant bladder tumors in laboratory animals.

It would be a tragedy if an uninformed public outcry against the saccharin ban were to sweep away the Delaney clause.

BURKE SAYS INFLATION CREATES LONGER WORKWEEK

HON. J. HERBERT BURKE

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. BURKE of Florida. Mr. Speaker, I would like to call the attention of all Representatives to an article written by Michael Novak which appeared in the Washington Star on March 20, 1977. The article, entitled "The 80-Hour Work Week for the Inflation-Ridden," states that as a reult of inflation the reality of a 40-hour workweek has given way to an 80-hour workweek. It is becoming more and more common that both husband and wife are having to work in order to support a standard of living whch is today considered only average. In many instances, the husband is forced to work at two jobs just to make ends meet.

For years many liberal Members of the Congress have been trying to convince the American people that deficit spending would make us better off. They spent years trying to deny that their programs either caused or aggravated our problems. And strangely, they nearly succeeded. But now, the American people are beginning to see that this policy is without merit because it is adversely affecting their lives.

The truth of the matter is that one of the prime causes of inflation is uncontrolled Government spending. Government spending not only causes inflation, but it also causes higher interest rates and this misallocation of our national resources. Each time the Congress appropriates more money than is collected through tax receipts, the pressures leading to increased inflation are increased.

Mr. Speaker, inflation is one of the cruelest forms of thievery. It now forces our private citizens to seek extra employment just in order to maintain a standard of living. And yet in spite of the fact that one out of every two wives work along with their husbands—and many husbands are now holding two jobs—90 percent of our families have incomes under $22,000 per year.

I hope that you my colleagues will give a careful reading to the following article. It contains an insight to which we will all be forced to subscribe sooner or later.

The article is as follows:

THE 80-HOUR WORK WEEK FOR THE INFLATION-RIDDEN

(By Michael Novak)

Forty years ago, a Democratic Congress succeeded in passing legislation limiting the working week to 40 hours. Since that time, Democrats have been less concerned about inflation than about bringing new goods to their constituents. But the upshot of inflation is that, once again, many working people are putting in 80-hour weeks. Sweatshops have given way to treadmills.

About one out of every two wives is working. The ordinary family cannot survive on the single 40-hour wage.

Even though so many husbands and wives both work, 90 per cent of our people have incomes under $22,000 per year.

And even when wives are working, many men are holding down two or even three jobs. One man works an eight-hour shift at a tool factory, and then an eight-hour shift as a (low paid) fireman. On Saturday and Sunday nights, he plays the piano at a local bar. He lives with his family in a third-floor flat.

More millions of Americans are holding two jobs than are unemployed. They are not becoming rich.

Many find it even more difficult to send children to college than it was a generation ago. Still in the fourth generation after immigration to America, some families have not yet sent a single child through college.

Many families that work for more than 80 hours a week make too much money to permit their children to qualify for college scholarships, but not enough to be able to afford tuition for three or four children.

The recent, classical Democratic response to such hardships is to demand that the government "do something." But the government can't "do something" without first taking the money from someone. Necessarily, this will mean taking more money from precisely the same people the government wishes to help. Out of one pocket—through the hands of the bureaucracy—back into the other pocket.

Serious Democrats have some basic rethinking to do. Their hearts have for too long wandered toward trendier issues which win them glossy pictures in the media.

Most activists in Democratic politics are highly educated and articulate professionals. By income, they rank in the top 10 per cent. So do all who make more than $22,000 per year. The priorities of this constituency seldom include the raw economics of the working class. The lifestyle of the top 10 per cent keeps them out of touch with the sufferings of the other 90 per cent.

The Democratic party needs a new political criterion and measure for every single program: What will this program cost the men and women working 80 hours a week, and bringing home (say) $16,000 between them? (About half of all households fall below this level, half above.)

It is time for the Democrats to try to bring the balance between the costs of government and inflation back into some sane relationship, so that men and women will not have to work 80-hour weeks, just to stand still.

YOUTH UNEMPLOYMENT AND DROPOUTS

HON. AUGUSTUS F. HAWKINS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. HAWKINS. Mr. Speaker, unemployment continues to have a crippling effect upon the people of our Nation. Our young people are among the ones who are the most frustrated by the current unemployment situation. Now is the time to initiate a comprehensive employment program to cure the diseases that are promoted by a high jobless rate. George Curtin, columnist for the Los Angeles Citizen writes on how unemployment is a detriment to our society, particularly our young group. I wish to commend Mr. Curtin for his comments and submit his article as follows:

[From the Los Angeles Citizen, Mar. 4, 1977]

UNEMPLOYMENT AMONG YOUNG CREATING PERMANENT GROUP OF DROP-OUTS

(By George Curtin)

Among the most disturbing legacies of the Nixon-Ford years has been the lingering economic depression that continues to affect the life opportunities of millions of young Americans. The era of youth politics, largely a media invention in any event, has been replaced by a numbing indifference to the problems faced by millions of young workers.

While persons over the age of 25 suffer a 6 percent unemployment rate, joblessness in the 16–19 age group is nearly 20 percent, and for those between 20 and 24 the rate is almost 14 percent. The continuation of such unemployment trends portends serious consequences not only for the young but for society as well.

Unemployment among the young retards the development of skills and work habits which are essential to successful adult employment.

Unless jobs are provided that make allowances for the special needs of the young, the high rate of unemployment among youth will eventually create escalating unemployment rates further up the age scale and lead to the development of a permanent group of drop-outs surviving on the public dole.

But skill development and work habits are not the only things at stake. Youth unemployment impedes normal family formation, and the absence of legitimate work makes illegitimate activities seem all the more attractive.

The official youth unemployment statistics do not count those who are so discouraged that they have completely dropped out of the job market, nor does it count those forced into part time work instead of full time careers.

According to government figures over 200,000 of the 800,000 discouraged Americans who have given up looking for work are teenagers. Sam A. Levitan, director of George Washington University's Center for Social Policy Studies, estimates that at least that many more teenagers are potential candidates for juvenile crime as a result of the frustrations of unemployment.

The problem of unemployment is particularly severe among minority youth. The official rate of unemployment among black youth, for instance, is now over 40 percent. As Congressman Augustus Hawkins has pointed out, "It may be less costly in the long run to provide job oportunities for those in need, rather than expand our jails to house youth work may eventually turn to crime."

While the causes of youth unemployment are certainly complex, the solution is not nearly as difficult to understand nor to implement. Simply put, providing our economy with enough flexibility and sufficient jobs would go a long way towards guaranteeing everyone able to work the opportunity to do so. However, any program of full employment must be flexible enough to accomodate the many needs and problems unique to young people.

Such a program could include the updating and expansion of the role of vocational schools, the development of methods for combining education with work experience of an apprenticeship nature and the much needed improvement of vocational counseling.

It may also be necessary to establish a W.P.A. type program specifically to provide temporary employment and vocational training for those youth unable to find work in the private sector.

A youth corps program could also be utilized as a vehicle to provide high school equivalency training for those who lack it and college education for those who desire it. In this way, youth enrolled in the program would not be forced into careers with a limited potential.

But while special programs such as a federally financed youth corps are important and necessary, they are not adequate as a solution by themselves.

It's for this reason that the AFL–CIO has urged a comprehensive program for full employment that includes a 30 billion dollar job-creation stimulus to the economy; 2 billion of which is slated directly to youth employment and training.

Without a solution of this magnitude, it's inevitable that the tragic disregard for the welfare of millions of our young people will continue to sow the seeds for a future that is rife with unnecessary social conflict and divisiveness.

With a Democratic President and a Democratic Congress in Washington, the time is opportune for change. It is up to us to apply the appropriate political muscle to insure that our society guaranties all Americans the equality of opportunity that is their birthright.

CAMBODIA: "WHERE TERROR IS KING"

HON. STEPHEN J. SOLARZ

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. SOLARZ. Mr. Speaker, Anthony Lewis has written a perceptive article on the apparently subhuman situation within Cambodia today. Cambodia suffered immensely during the long Indochina war due to American bombers; it apparently is still suffering from being "the most tightly locked up country in the world, where the bloodiest revolution in history is now taking place."

It is obvious that American hands in the matter are by no means clean. Indeed, if it had not been for President Nixon's and Henry Kissinger's brutal bombing campaign which helped to lead to the deaths of 1 million of Cambodia's 7 million people, the present situation may never have come to pass.

But guilty conscience or no, the United States and the world cannot forever shut our eyes to the barbarity in the name of revolution taking place within Cambodia. As Lewis points out, the United States and the rest of the world ignored tribal genocide in Burundi; we have also closed our eyes to massive brutality by Pakistan in what was to become Bangladesh and to the starvation in Ethiopia.

With the Carter administration concerned about the protection of human rights throughout the world, I would hope that we would no longer pretend that the killing in Cambodia—where some estimates put the number of deaths at 1 million people since the Communist takeover of that country—does not exist.

Mr. Speaker, I commend the column from the March 21 New York Times to the attention of all Members:

WHERE TERROR IS KING

(By Anthony Lewis)

BOSTON, March 20.—Communist Vietnam and Laos welcomed President Carter's commission on Americans missing in Indochina, but the government of Cambodia would not allow a visit. It was a decision to be expected from "the most tightly locked up country in the world, where the bloodiest revolution in history is now taking place."

That description of Cambodia today comes from an article by Jean Lacouture in the March 31 issue of the New York Review of Books. It is an article whose painful honesty lends ghastly conviction to its terrible conclusions.

"Genocide," Lacouture writes, "usually has been carried out against a foreign population or an internal minority. The new masters of Phnom Penh have invented something original—auto-genocide. After Auschwitz and Gulag, we might have thought this century had produced the ultimate horror, but we are now seeing the suicide of a people in the name of revolution; worse: in the name of socialism. . . .

"A group of modern intellectuals, formed by Western thought, primarily Marxist thought, claim to seek to return to a rustic Golden Age, to an ideal rural and national civilization. And proclaiming these ideals, they are systematically massacring, isolating and starving city and village populations whose crime was to have been born when they were."

There have been many reports of mass killing and brutality in Cambodia since the Khmer Rouge took over in April, 1975. A book on the subject, "Murder of a Gentle Land" by John Barron and Anthony Paul, was condensed in the February Reader's Digest.

The smell of horror was too strong to be ignored by any fair-minded person, and it has not been ignored. But in this country, and the West generally, there has been less outcry about the savagery in Cambodia than its dimensions might have suggested. Why?

The reports from a sealed country were necessarily second-hand—largely from refugees—and many have seemed exaggerated. Americans generally were weary of everything about Indochina. And those of us who had been critics of the war may have felt skeptical about some of the Cambodian reports because they came from right-wing quarters that had been indifferent to the misery inflicted on Cambodia by American bombers. When Henry Kissinger cries for Cambodia, there is reason for skepticism.

But those explanations wither in the presence of Jean Lacouture. He is a leading French expert on Indochina. And he was a profound critic of the American War. He has no reason of ideology or ignorance to exaggerate the crimes committed by the Khmer Rouge.

Lacouture's article is in form a review of "Cambodge, année zero," a book just published in Paris. It is by Francois Ponchaud, a priest who was in Cambodia for 10 years, until three weeks after the Khmer Rouge took Phnom Penh—an informed and sympathetic witness.

Among other things, Ponchaud quotes from orders by the revolutionary government itself. Texts it distributed to local officials, he says, urged them to "cut down" corrupt elites and "carriers of germs," including "their offspring until the last one." Lacouture comments: "The strategy of Herod."

Cambodia may have lost as many as 1-million of 7-million people in the war. Some have estimated, on the basis of both refugee accounts and statements by Khmer Rouge leaders themselves, that another 1 million have been killed since. Lacouture sees that scale of killing when he asks: "What Oriental despot of medieval inquisitors ever boasted of having eliminated . . . one-quarter of their own population?"

American policy helped bring disaster on Cambodia, and Lacouture knows it. Today's reality, he says, should shame "those in the Nixon Administration who bombed and laid waste Cambodia, undermining Sihanouk's regime, and refused to pursue negotiations with him in Peking, making an unmitigated Khmer Rouge victory all the more likely." But he rightly sees that as no reason for silence about Cambodia today.

It is true also that there is not much hope of affecting the Cambodian government. Among the world's tyrannies, it may be the least likely to be moved by outside protest. Those of us in the West who are particularly concerned about human rights may naturally incline to exert influence where it may have an effect: in countries sensitive to our criticism or dependent on relations with us. But utility cannot be the only standard in these matters.

To remain silent in the face of barbarism as enormous as Cambodia's would be to compromise our own humanity. It would be to say that hundreds of thousands of Cambodians do not count in the human scale. It would be to repeat the West's corrupting mistake in 1972 of ignoring tribal genocide in Burundi. In today's world, we ignore mass murder anywhere at our own peril.

THE AUBURN-FOLSOM SOUTH PROJECT IN CALIFORNIA

HON. HAROLD T. JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. JOHNSON of California. Mr. Speaker, one of the major water resource projects on the President's original list of water projects to be subjected to intensive review was the Auburn-Folsom South project in California. This project was authorized by the Congress nearly 12 years ago; initial funding was provided the following year. Had the Auburn Dam been constructed according to the original schedule, it would be in full operation today.

The severe drought which has hit California and the Western States is creating hardships for urban and rural areas alike. Household water supplies are cut back; grazing lands are threatened; orchards and vineyards may be destroyed in some areas; farmers will lose crops or not plant at all. It is too early to be able to estimate how serious the total damage will be.

Under the circumstances, the question occurs as to how drought conditions might have been alleviated if Auburn Dam were completed and in working order. I asked the Bureau of Reclamation to answer that question and have received a reply that I wish to share with my colleagues. It indicates that an additional 1 million acre-feet of water would have been available if Auburn Dam had been completed as scheduled in 1974, and that this would have significantly reduced the impact of the current drought. The full text of the Bureau's letter follows:

BUREAU OF RECLAMATION,
Washington, D.C., March 17, 1977.

Hon. HAROLD T. JOHNSON,
House of Representatives,
Washington, D.C.

DEAR MR. JOHNSON: This is in further response to your letter of February 24, 1977, regarding what the impact of a completed Auburn Dam would be on today's water and power supplies had the dam been completed in the early 1970's.

As you are aware, Auburn Dam was authorized by Public Law 89–161 dated September 1965. Preconstruction and rights-of-way funds were appropriated by the Congress for fiscal year 1966 by Public Law 89–309 dated October 31, 1965, and construction funds were appropriated by Public Law 89–689 dated October 15, 1966. If sufficient funds for the construction of Auburn Dam had been appropriated originally as scheduled, the facility could have been completed by January 1974.

A review of the operation of the Central Valley Project (CVP) and the American River hydrology demonstrates that if the dam had been completed by January 1974, Auburn Reservoir could have been filled by the summer of 1975 without impairing any of the project purposes. The filling of Auburn Reservoir during that period would not have adversely impacted the water quality in the Sacramento-San Joaquin Delta. Auburn Reservoir could have been at the maximum allowable flood control storage capacity on October 1, 1975, thus increasing the CVP carryover storage by 2,050,000 acre-feet. The following benefits would have been derived from the increased capacity.

WATER YEAR 1975–76

The Bureau of Reclamation was able to deliver 100 percent of the normal water supply to all CVP water users; therefore, Auburn Dam would have had no impact on water deliveries in water year 1975–1976. However, the total CVP carryover storage on October 1, 1976, would have been increased by 1,900,000 acre-feet. The resultant storage increase in both Shasta and Folsom Lakes would have increased recreational opportunities and thus reduced recreation concessionaires' losses.

WATER YEAR 1976–1977

Reclamation has estimated that there will be the following deficiencies in CVP water deficiencies during water year 1976–1977:

1. A 25-percent deficiency on all water-rights contractors;

2. A 50-percent deficiency on all municipal and industrial uses; and

3. A 75-percent deficiency on all other agricultural uses.

If Auburn Reservoir had been completed by January 1974, we estimate that there would have been an additional 1 million acre-feet available resulting in the following deficiencies:

1. A 25-percent deficiency on all water-rights contractors;

2. No deficiency on municipal and industrial uses; and

3. A 25-percent deficiency on all other agricultural uses.

Assuming a rather conservative estimate (3 acre-feet/acre) for water use, the increased deliveries would allow farmers to produce crops on approximately 400,000 more acres in water year 1976–1977. The carryover on October 1, 1977, would be increased an estimated 950,000 acre-feet.

The power supply benefits derived from Auburn Dam and Reservoir are much more difficult to estimate than the water supply benefits. One obvious power benefit which

would occur in 1977 if Auburn was available is increased capability of the CVP to help California meet its peak summer daily demand when air-conditioning use is at its maximum. Pacific Gas and Electric Company is considering using rolling blackouts this summer due to lack of peaking ability and not because of lack of energy, so the increased CVP peaking capability due to Auburn Dam would be significant. Reclamation's estimate of the increased peaking capability in the critical months of July, August, and September which would be available from Auburn Powerplant is 500,000 kilowatts.

We hope that the above information will be useful. Please feel free to contact us again if additional information is desired.

Sincerely yours,

D. D. ANDERSON,
Acting Commissioner.

Mr. Speaker, I also want to take this opportunity to share with my colleagues the statement that I presented at the special hearing on the Auburn Dam project which was held by the Department of the Interior in Sacramento, Calif., on March 21.

The analysis of project benefits versus costs is being used in the reevaluation of Auburn Dam and other water projects on the President's list. It is appropriate that it should be used as one of the key criteria, of course. But the way in which benefit/cost ratios are determined, and particularly the use of interest rates in determining such ratios, bears closer study.

This is the subject of the statement I presented in Sacramento last Monday. The full text follows:

ECONOMIC JUSTIFICATION AS INDICATED BY THE BENEFIT-COST EVALUATION

(Statement of HAROLD T. JOHNSON)

Within recent times, certainly within the careers of most of us, we have relied heavily on the benefit-cost evaluation as an indicator of whether a water project is good or bad. Apparently, the Executive Branch in eliminating funds from the FY 1977 Budget for Auburn Dam has relied, to some extent, on the benefit-cost ratio, an important element of which is the discount rate.

My records indicate that the benefit-cost ratio for the Auburn-Folsom South Unit at the time of authorization in 1965 showed a ratio of 3.56 to 1 based on total benefits and 2.58 to 1 based on direct (efficiency) benefits. The discount rate used for these computations was 3⅛ percent.

This contrasts to the benefit-cost ratio of precisely 1 to 1 apparently used by the President and his advisers as a partial basis for the deletion of Auburn from the Budget. Additional information available indicates that the recent computation makes use of a discount rate of 6⅜ percent which change in criteria alone would account for most of the change in the observed ratio.

The original discount rate (that in use in 1965) was based on an average long term cost of money concept making use of public securities having terms to maturity of 15 years or more. Evidently, the higher rate attempts to approximate the cost of current borrowing.

The differences in these two concepts is simple to distinguish and fairly easy to defend if one takes a narrow and simplistic approach to the issue. The use of the higher rate is valid if one assumes all other variables in the evaluation process are correctly stated and equally as capable of determination as is the discount rate.

This is the crux of the matter. Objective, long-term students of water resource decisions have long recognized that the evaluated benefits accruing to all of society far exceed the effects that are reflected by the conventional benefit-cost analysis. In other words, there is a clear justification for shaving the discount rate used for capitalizing costs until the measurement of project benefits is brought to the same level of sophistication and validity as has been the case with the cost factors.

These heretofore overlooked effects are well recognized by those of us who have had a first-hand personal exposure to water resource development, but they may have escaped the notice of others whose experience has been less specialized. In an effort to compensate for this lack of insight, I have prepared a supplementary statement on this subject which I offer for the record of this hearing and the edification of those now making decisions within the Executive Branch.

THE DISCOUNT RATE IN PUBLIC INVESTMENT EVALUATION

The Federal water resources agencies have used a discount rate since they began making economic analyses over 30 years ago. This rate has been based on a concept of long-term cost of money to the Federal Government. Senate Document 97 advocated such a concept as did the Bureau of the Budget in Circular A–47. The current action by the Administration apparently makes use of a long-term cost of money concept, but by selecting a different series and time period for the bond issue in the formula, a different and higher rate is obtained. Current thinking generally supports a higher rate than has been used traditionally in economic analysis, and we agree that if a current cost of money concept is to be used, a somewhat higher rate of interest is probably appropriate.

Although much more could be said regarding the conceptual or theoretical basis for selecting a discount rate, it is more relevant to address agency practices in making economic analyses. In this economic analysis process, the interest rate is only one component, albeit an important one. At the moment public interest centers on the interest rate, but it seems to me that the time is ripe to reevaluate or reassess the entire evaluation procedure.

We will not make much progress by developing a higher degree of sophistication in the use of interest rates while permitting the balance of our evaluation process to remain in the dark ages. It occurs to me that there are two basic reasons for reassessing the evaluation process at this time. First, I believe that our entire analysis can be best described as ultraconservative, and, secondly, the analysis is directed towards only the goal of economic efficiency and almost completely disregards the other objectives of resource development.

As I said, conservatism has consistently characterized our economic analysis. Let me cite a few examples. The benefits we ascribe to the power and municipal and industrial functions are based upon the cost of the most likely single-purpose project to exist in the absence of the multiple-purpose project. At very best this measures only the absolute minimum benefit level and does not begin to account for the full economic impact of such purposes. Our projections of recreation benefits have almost without exception been far below that which has actually been experienced. This can be attributable in a large part to our population projections which have been short of actual achievement. Our irrigation benefits which are increases in net farm income are based upon projections of crop yields, on-farm efficiencies, and technological improvements. These projections have not kept pace with current growth, much less the foreseeable future, thus understating the irrigation benefits. The foregoing areas are not meant to be conclusive, but they are certainly areas where conservatism has been the rule. Also these aspects of the analysis have been within the control of the estimating agency to adjust and modify.

Another aspect of our analysis that needs reconsideration is the secondary or indirect benefits. Historically, the Bureau of Reclamation has made an effort to evaluate secondary irrigation benefits. As you are aware, this has not been granted universal acclaim and such indirect effects never enter into the Executive Branch decisionmaking process. To the extent that secondary benefits are valid they should also be ascribed to all the purposes of water resource development projects. Some work has been done in this area but much remains. A common set of definitions should be the first order of business. We also need to develop tools in order to place a monetary value to secondary effects. Last, and most important, a sound conceptual framework for secondary benefits should be developed particularly in relationship to the socio-economic aspects of water resource development.

The major area in the analysis that leads to a conservative result is our inability to evaluate in monetary terms the intangible effects of resource development projects. Forty years ago almost all project effects could be said to be intangible since we had not developed tools with which we could place a monetary value on project accomplishments. We have progressed, if I may use that term, to the point where today many of the more readily quantifiable effects are measured in monetary terms. However, many project effects, largely socio-economic in nature, remain unevaluated. This again supports the contention that our analysis is conservative. Some of these effects that need to be measured in monetary terms are stabilization of income, creation of employment opportunity, economic flexibility, redistribution of income, population dispersal, resource preservation, preservation of ecological balance, environmental quality and the economic and social well being of people. Few people would deny that these are all positive important benefits and certainly desirable goals from the standpoint of the national government as well as from the local and regional point of view. Unfortunately, no matter how desirable they are and how much we emphasize them, until that time arrives when we can place monetary values on these effects, they will be largely ignored by the decision-makers.

One area is the intangible irrigation benefits resulting from the development of the so-called family-sized farm. Reclamation law limits the amount of water that can be delivered to a single ownership to not exceed 160 acres. A corporate-sized farm with several thousand acres would presumably be much more efficient in terms of producing food and fiber. Therefore, if it is in the national interest to develop family-sized units, the substantial intangible values and social goals being achieved, should be quantified.

Another important area is the economic flexibility inherent in virtually all water projects. This flexibility may take many forms, but two come to mind. Historically, most water resource developments in the West had their origin in single-purpose irrigation projects. At the time of their conception, irrigation development was a sufficient reason for project development. It was, as time has proved, to be the logical nucleus for multiple-purpose resource development. Many projects that were conceived as irrigation developments are now producing effects which include municipal and industrial water, fish and wildlife, and recreation which were not even dreamed of at the time the project was authorized. Another area, in a completely different context, provides flexibility for the irrigation

farmer. Under irrigation, the farm is able to produce a wide variety of crops and change the cropping pattern to accommodate different levels of supply and demand. Thus, irrigation provides the farmer with the potential to enhance and stabilize his income through flexibility of choice unavailable in a dry-land economy. Interest rates used to justify Auburn Dam, even though they are subject to criticism because they are too low, tend to compensate for the understated benefit values. This should not be construed as a defense of the process but is meant to emphasize the fact that updating for discount rates without giving attention to the numerous other facets of the analysis that need reassessing would probably result in an analysis even more subject to critism than the one currently being made.

The second basic reason that I see for reevaluating the total process relates to the goals and objectives of the water resource development. As is obvious by inspection of any contemporary analysis, economic efficiency is almost the sole criterion for measuring the desirability of resource development. I would like to quote from Professor Arthur Maass from Harvard University who has made the following observations:

"The major limitation of benefit-cost analysis, as it has been applied to public investments in the United States, is that it ranks projects and programs in terms only of economic efficiency. (At the national level this means that projects and programs are judged by the amount that they increase the national product.) But the objective of most public programs is not simply, not even principally, economic efficiency. The redistribution of income to classes or to regions is an important objective in government plans—witness the Appalachia program. And there are other objectives, too—the promotion of national self-sufficiency, for example.

"In other words, the objective functions of most government programs are complex; yet benefit-cost analysis has been adopted to only a single objective—economic efficiency. Thus, benefit-cost analysis may be largely irrelevant, or relevant to only a small part of the problem of evaluating public projects and programs. We should not settle for the current state of benefit-cost analysis, but rather find ways to make it applicable to the real issues of public investment.

"Now, in all complex objective functions for government programs, economic efficiency will be one term. A second will frequently be income redistribution, as has been noted—to classes (the poor) or to regions (depressed areas). These two objectives may be complementary in some ways: a program designed to transfer income from the rest of the Nation to Appalachia or from the wealthy to the poor, may also increase national product. But a government program that maximizes efficiency will not necessarily, indeed is not likely to, achieve a specified high level of income redistribution. Thus, a planner who is responsible for developing a program or project for both purposes will need to know the relative weights to assign to efficiency and income redistribution." [1]

If serious consideration is given to the recognition of the other goals and objectives in water resource development, the appropriate interest rate should be considered concurrently. Benefit-cost analysis and a cost of money concept for interest rates are closely related to the goal of economic efficiency. It may well be that consideration of other goals may lead to an interest rate based on a social rate of time preference or some other concept less oriented to the philosophy of profit maximization. In any event, benefit-cost analysis has been almost the sole basis for measuring the economic value of water resource projects. It is time we looked at these projects in terms of their relationship to all the national programs including poverty, employment, education, and even beautification.

In summary, I believe it is appropriate that we be concerned with the conceptual validity of the interest rate used in the economic analysis. At the same time, however, we should give serious consideration to the soundness of the total evaluation process; first as it relates to the benefit measurement problem, and, secondly, to the multiple goals and objectives of the water resource development program.

ENERGY CONSERVATION TAX INCENTIVES BILL—H.R. 5500

HON. MIKE McCORMACK

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. McCORMACK. Mr. Speaker, this is to inform the Members that I have today submitted a new bill, H.R. 5500, the energy conservation tax incentives bill, designed to establish a positive program which can have an impact, in the near future, on reducing energy consumption in this Nation.

The insulation of residences and other buildings, the installation of solar heating equipment, the installation of heat pumps, and the use of electric vehicles are the four most significant options available to the average citizen who wishes to help conserve energy without lowering his standard of living. Our Federal demonstration programs, and the normal pressures of the marketplace, have brought solar heating systems for individual residences, including those for hot water, to the point where a number are now available from a number of reliable dealers. The same is true for home insulation, heat pumps, and to a lesser extent, for electric vehicles.

Solar heating and solar hot water systems are now competitive in those areas of the country where other sources of energy for the heating of buildings is expensive. The insulation of presently uninsulated homes can save vast amounts of energy. Heating and cooling systems using heat pumps are substantially economical and practical than most other heating and cooling systems, especially when combined with solar heating systems. The use of electric vehicles can save millions of gallons of gasoline and petroleum products in the not too distant future, and give us cleaner air and safer streets.

This country cannot wait any longer to provide the incentives required for massive application of these technologies by individual homeowners. H.R. 5500, by granting a tax credit of 25 percent of the cost incurred by an individual taxpayer, up to a tax credit of $2,500 for each energy conservation option, will provide that incentive.

The bill, as introduced, reads as follows:

H.R. 5500

A bill to encourage energy conservation in residences and in use of electric vehicles

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. SHORT TITLE.

This Act may be cited as the Energy Conservation Tax Incentives Act of 1977".

SEC. 2. AMENDMENT OF INTERNAL REVENUE CODE OF 1954.

Except as otherwise expressly provided, whenever in this Act an amendment or repeal is expressed in terms of an amendment to, or repeal of, a section or other provision, the reference shall be considered to be made to a section or other provision of the Internal Revenue Code of 1954.

SEC. 3. ENERGY CONSERVATION EXPENDITURES.

(a) GENERAL RULE.—Subpart A of part IV of subchapter 1 (relating to credits allowable) is amended by inserting immediately before section 45 the following new section:

"SEC. 44B. ENERGY CONSERVATION EXPENDITURES.

"(a) GENERAL RULE.—In the case of an individual, there shall be allowed as a credit against the tax imposed by this chapter for the taxable year an amount equal to 25 percent of that portion of the qualified energy conservation expenditures in each of the categories described in paragraph (b) as does not exceed $2,500 with respect to each category separately.

"(b) APPLICATION OF SECTION.—The qualified energy conservation expenditures to which this section applies are:

"(1) qualified insulation expenditures,

"(2) qualified residential solar energy equipment expenditures,

"(3) qualified residential heat pump equipment expenditures, and

"(4) qualified electric vehicle expenditures.

"(c) QUALIFIED ENERGY CONSERVATION EXPENDITURES.—For purposes of this section—

"(1) QUALIFIED INSULATION EXPENDITURES.—The term 'qualified insulation expenditures' means any amount paid or incurred by the taxpayer during the taxable year for insulation (including amounts paid or incurred as the cost of original installation of such insulation) installed on or after January 1, 1977, and before January 1, 1982, in a dwelling unit located in the United States which is—

"(A) Used by the taxpayer as his residence or leased (or held for lease) by him to other persons for use as their residence, and

"(B) in existence on January 1, 1977.

"(2) QUALIFIED RESIDENTIAL SOLAR ENERGY EQUIPMENT EXPENDITURES.—The term 'qualified solar energy equipment expenditures' means any amount paid or incurred by the taxpayer for any installation which occurs on or after January 1, 1977, and before January 1, 1982, of solar energy equipment in, on, or connected to any dwelling unit located in the United States which is used by the taxpayer as his residence or leased (or held for lease) by him to other persons for use as their residence.

"(3) QUALIFIED RESIDENTIAL HEAT PUMP EQUIPMENT EXPENDITURES.—The term 'qualified residential heat pump equipment expenditures' means any amount paid or incurred by the taxpayer for any installation which occurs on or after January 1, 1977, and before January 1, 1982, of heat pump equipment in, on, or connected to any dwelling unit located in the United States, but only if such installation is in connection with the replacement of existing electric resistance space heating by qualified heat pump equipment which constitutes the principal source of space heat for such dwelling unit.

"(4) QUALIFIED ELECTRIC VEHICLE EXPENDI-

TURES.—The term 'qualified electric vehicle expenditures' means any amount paid or incurred by an individual on or after January 1, 1977, and before January 1, 1982, for a new electric motor vehicle—

"(A) for the personal use of the taxpayer or any member of his family, and

"(B) the original use of which begins with the taxpayer or any member of his family.

"(d) DEFINITIONS.—For purposes of this section—

"(1) INSULATION.—The term 'insulation' means any insulation (including the insulation of furnaces or boilers not so equipped, and the ducts or steam and hot water piping extending therefrom), storm or thermal window or door, caulking, weatherstripping, or any other similar item—

"(A) specifically and primarily designed to reduce, when installed in or on a residence, the heat loss or gain of such residence,

"(B) the original use of which commences with the taxpayer (or his lessees),

"(C) which has a useful life to the taxpayer of at least 3 years,

"(D) which meets the criteria and standards for energy conserving improvements prescribed by the Secretary of Housing and Urban Development under section 2 of the National Housing Act, or such similar criteria and standards as the Secretary may prescribe.

"(2) RESIDENTIAL SOLAR ENERGY EQUIPMENT.—The term 'residential solar energy equipment' means equipment—

"(A) which, when installed in or on, or when connected to, a dwelling unit—

"(i) uses solar energy to heat or cool such dwelling unit or provide hot water for use within such building; and

"(ii) meets the latest technical standards prescribed by the Secretary of Housing and Urban Development under the Solar Heating and Cooling Demonstration Act of 1974;

"(B) the original use of which commences with the taxpayer or his lessees; and

"(C) which has a useful life of at least 3 years.

"(3) RESIDENTIAL HEAT PUMP EQUIPMENT.—The term 'residential heat pump equipment' means equipment—

"(A) which, when installed in or on, or when connected to, a dwelling unit uses a compressible refrigerant system which is reversible to move heat into and out of the building by rejecting or absorbing heat from water, the ground, or the air;

"(B) the original use of which commences with the taxpayer or his lessees; and

"(C) which has a useful life of at least 3 years.

"(4) ELECTRIC VEHICLE.—The term 'electric vehicle' means any highway vehicle which is powered primarily by an electric motor drawing current from rechargeable storage batteries or other portable sources of electric current.

"(e) LIMITATIONS.—

"(1) APPLICATION WITH OTHER CREDITS.—In determining the credits allowed under—

"(A) section 33 (relating to foreign tax credit),

"(B) section 37 (relating to credit for the elderly),

"(C) section 38 (relating to investment in certain depreciable property),

"(D) section 40 (relating to expenses of work incentive programs),

"(E) section 41 (relating to contributions to candidates for public office),

"(F) section 42 (relating to general tax credit),

"(G) section 44 (relating to purchase of new principal residence), and

"(H) section 44A (relating to expenses for household and dependent care services necessary for gainful employment),

the tax imposed by this chapter (before any other reductions except the reduction allowed under section 42) shall be reduced by the credits allowed by this section.

"(2) QUALIFYING EXPENDITURES IN PRIOR YEARS.—If the taxpayer made qualified energy conservation expenditures with respect to any dwelling unit in any prior taxable year, then subsection (a) shall be applied with respect to such dwelling unit for the taxable year by reducing the $2,500 limitation with respect to each category of such expenditures by the amount of such prior expenditures allowed as a credit under this section for such prior year.

"(3) VERIFICATION.—No credit shall be allowed under subsection (a) with respect to any qualified energy conservation expenditures unless such expenditures are verified in such manner as the Secretary shall prescribe by regulations.

"(4) DENIAL OF CREDIT.—No credit shall be allowed under subsection (a) for any amount paid or incurred with respect to a dwelling unit located in a unit of local government in which improvements resulting from energy conservation expenditures are taken into account for property tax assessment purposes.

"(5) PROPERTY ACQUIRED WITH FEDERAL FUNDS.—This section shall not apply to any property acquired by the taxpayer with amounts received by the taxpayer from the United States (or any agency or instrumentality thereof) under a grant, loan, or loan guarantee.

"(f) SPECIAL RULES.—For purposes of this section—

"(1) JOINT OCCUPANCY.—In the case of any dwelling unit which is jointly occupied and is used during any calendar year as a residence by two or more individuals—

"(A) the amount of the credit allowable under subsection (a) (after applying subsection (e)(2)) with respect to any qualified energy conservation expenditures paid or incurred during such calendar year by any of such individuals with respect to such dwelling unit shall be determined by treating all such individuals as one taxpayer whose taxable year is such calendar year; and

"(B) each of such individuals shall be allowed a credit under subsection (a) for the taxable year in which such calendar year ends in an amount which bears the same ratio to the amount determined under subparagraph (A) as the amount paid or incurred by such individual during such calendar year for such expenditures bears to the aggregate of the amounts paid by all of such individuals during such calendar year for such expenditures.

"(2) TENANT STOCKHOLDER IN COOPERATIVE HOUSING CORPORATION.—In the case of an individual who holds stock as a tenant stockholder (as defined in section 216) in a cooperative housing corporation (as defined in such section), such individual—

"(A) shall be treated as owning the dwelling unit which he is entitled to occupy as such stockholder; and

"(B) shall be treated as having paid his tenant stockholder's proportionate share (as defined in section 216(b)(3)) of any qualified energy conservation expenditures paid or incurred by such corporation.

"(3) REDUCTION OF BASIS.—The basis of any property shall not be increased by the amount of any qualified energy conservation expenditures made with respect to such property to the extent of the amount of any credit allowed under this section with respect to such expenditures.

"(4) CARRYOVER OF UNUSED CREDIT.—If the amount of the credit determined under subsection (a) for a taxable year (including amounts carried over to that year under this subsection) exceeds the liability of the taxpayer for tax under this chapter for the taxable year, the excess shall be carried over to the first, second, and third taxable years (in that order) succeeding such taxable year and may be claimed as a credit in any such year to the extent the credit so claimed does not exceed the liability of the taxpayer for tax under this chapter in any such year.

"(5) TERMINATION.—This section shall not apply to any amount paid or incurred after December 31, 1981 except in the case of amounts paid after such date pursuant to a binding contract entered into before January 1, 1982.".

(b) TECHNICAL AND CONFORMING AMENDMENTS.—

(1) The table of sections for such subpart A is amended by inserting immediately before the item relating to section 45 the following new item:

"SEC. 44B. "ENERGY CONSERVATION EXPENDITURES.".

(2) Subsection (a) of section 1016 (relating to adjustments to basis) is amended by striking out the period at the end of paragraph (23) and inserting in lieu thereof a semicolon and by inserting after paragraph (23) the following new paragraph:

"(24) to the extent provided in section 44B(f)(3), in the case of property with respect to which a credit has been allowed under section 44B.".

(3) Section 6096(b) (relating to designation of income tax payment to Presidential Election Campaign Fund) is amended by striking out "and 44A" and inserting in lieu thereof "44A, and 44B".

(c) EFFECTIVE DATE.—The amendments made by this section shall apply to amounts paid or incurred after December 31, 1976.

AG RESEARCH VITAL

HON. JAMES ABDNOR

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. ABDNOR. Mr. Speaker, with headlines proclaiming that over 40 percent of the world's food is lost to pests, with severe drought plaguing many areas of our land, with conservation of resources becoming more and more vital, the role of agricultural research increases in importance. It is with this in mind that I have submitted the following statement to the House Agriculture Subcommittee on Department Investigations, Oversight and Research:

STATEMENT OF HON. JAMES ABDNOR BEFORE THE HOUSE AGRICULTURE SUBCOMMITTEE ON DEPARTMENT INVESTIGATIONS, OVERSIGHT AND RESEARCH, MARCH 21, 1977

Mr. Chairman, I want to commend the subcommittee for the early action on legislation of great importance. The world's capability to feed and clothe itself is, and has been, to a large extent, dependent upon American agricultural research.

The need for this research, in my view, is more urgent today than it has ever been. An illustration of this need is found in an article in the Sunday, March 6, edition of the Washington Post citing that over 40 percent of the world's food is lost to pests. I would like to include this article for the record:

OVER 40 PERCENT OF WORLD'S FOOD IS LOST TO PESTS

(By Thomas O'Toole)

DENVER.—Almost half of the food produced in the world today is lost to pests, despite the fact that world pesticide use will reach a record 4.1 billion pounds this year.

That amounts to more than a pound of pesticide for every man, woman and child

on earth, Dr. David Pimintel of Cornell University told the annual meeting of the American Association for the Advancement of Science, last month. He said that is an increase of 20 per cent in the last five years.

Progress is not being made against the world's pests, Pimintel and the University of California's Dr. Ray F. Smith said, because the pests are developing growing immunity to pesticides and because so much pesticides is being used that it is destroying the predators and parasites that are the natural enemies of the pests.

"Fully 90 per cent of all the eggs and larvae of crop pests would be destroyed by their own natural enemies if we made better use of pesticide," Smith said at a press conference. "We're not doing any better than half that, because of our overuse of pesticide."

The leading users of pesticide are the Central American countries of El Salvador, Guatemala, Honduras and Nicaragua, where 70 million pounds of insecticides are used to kill cotton pests every year. In El Salvador alone, an estimated 2,400 pounds are used on every square mile of cotton fields. The tiny country consumes one-fifth of the world's parathion, a leading insecticide.

Cotton yields have not increased in Central America, Pimintel said, because overuse of inseticide has killed off the parasites that destroy the boll weevil and bollworm. At the same time, the indiscriminate use of pesticide is responsible for 4,000 to 5,000 human poisonings every year in Central America, he said.

Moreover, mosquito populations along the coastal plains of Central America have grown so resistant to pesticides that they have begun to carry and spread malaria in all four countries, the scientists said, in El Salvador alone, the incidence of malaria rose from 25,000 cases three years ago to more than 80,000 last year.

Pimintel and Smith said that about 33 percent of the food lost in the world is lost to pests before it can be harvested. Another 9 per cent is lost after harvest, much of it to rats before it can be marketed.

Dr. Max Milner of the Massachusetts Institute of Technology said that in one recent year rate consumed 50 per cent of the sugar and corn and up to 90 per cent of the rice harvested in the Philippine Islands. Milner said that in India alone it would take a train 3,000 miles long to haul the grain eaten by rats in a single year.

CONTINUATION OF STATEMENT

Mr. Chairman, I shall not impose on your time with a recital of facts and figures on the accomplishments of past research. Let me endorse early enactment of legislation enhancing agriculture research, by repeating comments I made before the full committee on March 1.

"First and perhaps least controversial, it is entirely appropriate for the federal government to support and foster research to improve the efficiency of our agricultural production, processing, transportation and marketing systems. As far as consumer prices are concerned it appears that the most room for improvement is to be found once the product leaves the farm gate. According to USDA's data on the farm-retail price spread, middlemen receive over 60 percent of the consumer's dollar and farmers receive less than 30 percent.

"There remain improvements to be made on the farm as well. Research efforts to improve farm production efficiency might well be directed toward discovering ways to lower costs of inputs, particularly energy, and to increase conservation practices. Farmers have come a long way in learning to deal with the vagaries of Mother Nature but we've still got a long way to go, as the drought amply attests."

CBO PAPER ON FOREIGN AID

HON. DON BONKER

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. BONKER. Mr. Speaker, since the pathbreaking "New Directions" language of the Foreign Assistance Act of 1973, reaffirmed in the International Development and Food Assistance Act of 1975, it has been the stated priority of American bilateral assistance to improve the lives of the world's poorest people. Although humanitarian concern would have seemed an obvious motive of our economic aid, and probably the popular notion of why we dole out money abroad, in fact the program in its practical application has often been influenced by political considerations or oriented to prestige projects and glittering GNP statistics without so much concern for the trickle-down.

Even in fiscal year 1977, the category of security supporting assistance—arguably an implicit payment to Mideast countries for the Sinai pact, to Spain for military facilities, and to certain African countries for help on Angola and Rhodesia—makes for a 32-percent chunk of our economic aid. At the same time, the level of the remaining aid in real dollars continues its steady post-Marshall plan decline.

It is not surprising that Congress determined to reorient economic aid, frustrated as it was with the sort of abuses endured in Vietnam—the Joint Economic Committee in 1971 estimated that nearly $700 million in food-for-peace funds had translated to military assistance during the previous 6 years—the worsening distribution of income in certain countries we had been helping, sometimes despite increases in per capita GNP, and in general the inability to express concretely the charity for which we like to think the United States is known. Its explicit mandate was that:

Greatest emphasis shall be placed on countries and activities which effectively involve the poor in development, by expanding their access to the economy through services and institutions at the local level, increasing labor-intensive production, spreading productive investment and services out from major cities to small towns and outlying rural areas, and otherwise providing opportunities for the poor to better their lives through their own effort.

This is also the tack OECD's Development Assistance Committee has encouraged western industrialized countries generally to take.

Whether the Agency for International Development is complying its best with this new standard, and whether, in the first place, the standard is the optimal one for bettering the lot of the poor, can very much be debated.

In this connection, I urge the attention of my colleagues to a paper just published by the Congressional Budget Office entitled, "Bilateral Development Assistance: Background and Options." It should be useful this session, when, presented with an already mandated dramatic increase in multilateral development aid for fiscal year 1978, Congress will have to ponder once more some of the underlying assumptions and purposes of our foreign aid programs. Roughly the alternatives are to continue the present level of economic aid—which would imply cutting bilateral development assistance 50 percent—or continuing the present balance between multilateral and bilateral assistance—which would imply a 60 percent or $1.7 billion increase in the latter.

The intent of our economic aid program has never been particularly clear, and in any case, has been subject to great change over the years. Surely some Congressmen hope economic aid will win us certain strategic friendships or promote markets for our exports. But I think Congress in the main likes to believe at least in some small way we are doing our best to relieve human misery. Yet as the CBO study notes, U.S. aid amounts to less than 1 percent of the GNP of most recipient countries and is less than 15 percent of their total aid. Moreover, 40 percent of our economic assistance the past 10 years has gone to a select group of politically important States, and only half of fiscal year 1975 bilateral food and development aid went to LDC's with per capita incomes of less than $300. Much of the answer to the grinding poverty of the Third World seems to lie in indigenous policies of land tenure, development of intermediate technologies and the market conditions and political will to use them.

Some encouragement is offered, though, by the finding that 45 percent of fiscal year 1977 bilateral funds are being directed to rural development and food and nutrition, a considerably larger percentage than other donor nations provide. Moreover, Prof. Ray Prosterman of the University of Washington Law School, who undertook an exercise of "grading" AID's compliance with new directory legislation, estimates that in dollar terms for fiscal year 1977, 23 percent of the projects were fully consistent and 75 percent at least partly consistent. Finally, as CBO notes, though our projects may not in themselves have such a big impact on the developing world in relation to its almost incalculable problems, they can be helpful for their demonstration value or, by conditional grants, in encouraging certain budget priorities of the host government itself.

We have learned reluctantly that it is one thing to give poor countries money and another thing for them in turn to distribute it fairly and efficiently. Congress has yet to decide really what mix it wants to achieve between short-run and long-run effects, and between economic and sociological and political objectives. CBO's efforts will be helpful in the analysis.

EXCEPTIONAL SERVICE OF DR. JOHN L. McLUCAS, ADMINISTRATOR OF THE FEDERAL AVIATION ADMINISTRATION AND FORMER SECRETARY OF THE AIR FORCE

HON. JOHN J. McFALL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. McFALL. Mr. Speaker, one of the most distinguished members of our Nation's aviation and scientific community, Dr. John L. McLucas, will soon leave his post as Administrator of the Federal Aviation Administration. He does so, as is his nature, quietly and without fanfare.

But I cannot, nor must any of us, let this distinguished gentleman's career as an academician, an industrialist and inventor, and as a brillantly able Federal administrator of military and civil aeronautical affairs pass unheralded. And so I take this opportunity, Mr. Speaker, to acknowledge for all of us the exceptional service of Dr. John L. McLucas, former Secretary of the U.S. Air Force and presently Administrator of the Federal Aviation Administration.

I rise to honor his achievements and his devotion of more than 16 years to public service. I join with the entire aviation community, and all of the general public who are so dependent on our country's magnificent air transportation industry, in saluting him for his dedicated service to America. Our country owes a great debt of gratitude to men like him who do so much to promote the best interests of the Nation.

Prior to his assignment as Administrator of the FAA, Dr. McLucas was Secretary of the Air Force from July 1973 to November 1975 and Under Secretary from 1969 to 1973. He was president of Mitre Corporation during the years 1966 to 1969 and for 2 years prior to 1966 he held a key post in Paris with the North Atlantic Treaty Organization (NATO). His first position in the Pentagon was during 1962-64 when he was appointed Deputy Director of Defense Research and Engineering—Tactical Warfare Programs. In 1959, he joined the electronics firm of Haller, Raymond and Brown (HRB), Inc., in State College, Pa., as vice president and technical director. He became president of the firm in 1958 and remained in that position when it became HRB-Singer, Inc.

During his years at the Pentagon, Dr. McLucas established a solid reputation as an effective and cost-conscious administrator with particular expertise in the important research and development area. To help reduce procurement costs he fostered the prototype technique in the development of new military hardware. He also flew in virtually every aircraft in the Air Force inventory to obtain first-hand knowledge of the capabilities of military systems.

His superior work in this area earned him the Department of Defense Medal for Distinguished Service in 1964. In recognition of his substantial contributions to the national security, he received his second Department of Defense Medal for Distinguished Public Service in January 1973. He has been awarded similar medals for distinguished or outstanding service on four subsequent occasions. Then, on July 19, 1973, he was named Secretary of the Air Force, holding this post until named by President Ford to head the FAA in November 1975.

Through his personal and administrative leadership of the worldwide operations of the FAA, Dr. McLucas has contributed immeasurably to the enhancement of all aspects of air transportation and particularly to the field of aviation safety. It is interesting to note that in 1976, during his stewardship of the agency, the Nation's air carriers recorded the lowest accident total in commercial aviation history, and the fewest fatalities in more than 20 years. And in general aviation—all noncarrier flying—the fatal accident total was the lowest in 9 years.

In this connection, he established a new Office of Aviation Safety to afford more direct control and fast response to flight safety matters. And at his insistence the processing time for FAA procurements has been improved by 30 percent. Further, to streamline FAA operations, under his direction, accounting requirements for a uniform payroll system tailored specifically to FAA needs has been documented and will be installed in 1979.

Together with former Secretary of Transportation, William Coleman, Dr. McLucas developed a national aviation noise abatement policy, which lays out a comprehensive program for reducing noise levels at busy airports. A few weeks after the policy statement was adopted on November 18, 1976, the FAA issued new regulations requiring that all airline jets comply with Federal noise standards by January 1985.

Dr. McLucas holds patents on 10 electronic devices including an object locating system for ships and an aircraft collision warning system. In addition, he has been the founder or cofounded several small businesses.

His many contributions, particularly in such areas as financial management, congressional relations, and international affairs, will provide continuing improvements in aviation matters for years to come.

He has served with distinction under five Presidents of two parties, Mr. Speaker, and I know that all of us in this great House tender warmest good wishes to John L. McLucas for every future success and happiness.

MOBILE SOURCE EMISSION CONTROL AMENDMENTS OF 1977

HON. JAMES T. BROYHILL

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. BROYHILL. Mr. Speaker, the Health and Environment Subcommittee of the Interstate and Foreign Commerce Committee has been holding hearings and today will commence markup of clean air legislation. Much of the testimony presented at the hearings and much of the debate surrounding the clean air issue has been with regard to the question of establishing pollution reduction standards for automobiles. My colleague, JOHN DINGELL, and I have introduced in the House, H.R. 4444, to amend the Clean Air Act in order to establish a sound schedule of pollution reduction for the attainment of our clean air goals. While our legislation seeks to provide the automobile industry with workable, yet environmentally sound pollution standards, it also deals with several other aspects of the Clean Air Act which affect different segments of the automotive industry, namely, the aftermarket parts industry.

Since my colleagues may not be as familiar with the automotive "aftermarket" industry as they are with the rest of the industry, I am having printed in the RECORD a short section by section summary of H.R. 4444 as well as answers to the questions which have been asked most often regarding H.R. 4444 and the automotive aftermarket parts industry:

SECTION BY SECTION SUMMARY: DINGELL-BROYHILL/RIEGLE-GRIFFIN MOBILE SOURCE EMISSION CONTROL AMENDMENTS OF 1977

SECTION 1—SHORT TITLE

SECTION 2—LIGHT-DUTY MOTOR VEHICLE EMISSIONS

The new schedule of emission standards in this section is similar to the Dingell-Broyhill (Train-EPA) provision which was overwhelmingly adopted by the House on September 15, 1976, by a vote of 224 to 169, and which was previously introduced in the 95th Congress as H.R. 2380 and as S. 714, by Senators Riegle and Griffin. The new standards in this section reflect the agreement reached by Dingell-Broyhill/Riegle-Griffin and Mr. Leonard Woodcock of the United Auto Workers. This agreement provides that automobiles manufactured during model years 1978 and 1979 meet the same emissions standards applicable for model year 1977, that is: 1.5 grams per mile hydrocarbons, 15.0 gpm carbon monoxide, and 2.0 gpm oxides of nitrogen. For 1980 and subsequent model years the hydrocarbon standard requires a full 90 percent reduction from the levels omitted in model year 1970, or .41 gpm hydrocarbons. For 1980 and subsequent model years the carbon monoxide standard is 9.0 gpm. For 1980 and 1981 the oxides of nitrogen standard is 2.0 gpm. For 1982 and subsequent model years the NOx standard is 1.0 gpm which the EPA Administrator is permitted to revise up to 2.0 gpm for periods of two or more model years if he determines in a suspension proceeding that such standard should be revised due to (1) the lack of available, practicable, emission control technology to meet such standard during such period, (2) the cost of compliance with such standard, (3) the impact of such standard on motor vehicle fuel consumption. No such revision may be made if the Administrator determines that it would endanger public health.

Additionally, the Administrator may waive the standard of 1.0 gpm NOx up to 2.0 gpm during any period of four or more model years beginning with the model year 1982 if he determines that a waiver is necessary to permit the use of an innovative power train technology that can produce a substantial energy saving compared to conventional power trains. No waiver may be granted if the Administrator determines it would endanger public health.

AUTO EMISSIONS SCHEDULE

Dingell-Broyhill/Riegle-Griffin Woodcock (UAW)

	HC (gpm)	CO (gpm)	NO_x (gpm)
1978–79	1.5	15.0	2.0
1980–81	.41	9.0	2.0
1982 and thereafter	.41	9.0	[1] 1.0–2.0

[1] Suspension or waiver for NO_x based on EPA Administrator decision.

SECTION 3—TAMPERING

This section broadens the existing prohibition of the Clean Air Act against knowing removal or tampering with emission controls to cover any person engaged in the business of repairing, servicing, selling, leasing, or trading motor vehicles or engines or who operates a fleet of motor vehicles, and specifies the penalties for violations. This section also provides that the prohibition does not require use of manufacturer parts for maintenance or repair.

SECTION 4—TESTING BY SMALL MANUFACTURERS

This section which originated in the House and was accepted by the House and Senate Clean Air Conference during the 94th Congress, limits certification testing for vehicle manufacturers with projected annual sales of 300 or less to 5,000 miles or 160 hours.

SECTION 5—HIGH ALTITUDE PERFORMANCE ADJUSTMENTS

This section, which includes the same provision approved by the House and adopted by the Conference, exempts the adjustments of emission control systems of high altitude vehicles from the anti-tampering provision of existing law, if the adjustment does not adversely affect emission performance. The manufacturer is required to submit to the Administrator adjustment instructions.

In addition, this section adds a new provision which authorizes EPA to conduct a new rulemaking proceeding to determine the most appropriate method of implementing the Act's mobile source emission requirements for model year 1978 and thereafter with respect to light duty vehicles intended for principal use in high altitude areas. EPA is directed to consider the economic impact of any such regulation upon consumers, franchised dealers and the manufacturers, the state of the art of emission control technology, and the probable impact of such regulation on air quality in the affected areas.

SECTION 6—WARRANTIES AND MOTOR VEHICLE PARTS CERTIFICATION

This section provides that the performance warranty under the existing Clean Air Act shall not be invalidated on the basis of the use of parts that have been certified in accordance with regulations which EPA shall promulgate within two years.

This section further provides that the performance warranty mandated by law shall be for a period of 18 months or 18,000 miles, whichever first occurs. It also requires notification in the manufacturer's maintenance instructions that maintenance or repair may be performed using certified parts.

SECTION 7—PARTS STANDARDS: PREEMPTION OF STATE LAW

When the parts certification program provided for in Section 6 is finally implemented, the States, except California, are preempted from adopting or enforcing any requirement applicable to the same aspect of the part.

SECTION 8—SULPHUR EMISSIONS STUDY

This section originated in Senate and was adopted by the Conference. The Administrator is required to conduct a study of emissions of sulfur compounds from motor vehicles and aircraft. Health and welfare effects of such emissions are to be reviewed and alternative control strategies are to be analyzed. This study will be reported to Congress by January 1, 1978.

SECTION 9—DEFINITION OF EMISSION CONTROL DEVICE OR SYSTEM

This section defines, for the purposes of Section 207, the term "emission control device or system" to mean catalytic converters, thermal reactors, or other components installed on or in a vehicle for the purpose of reducing auto emissions.

SECTION 10—ADMINISTRATIVE PROCEDURES AND JUDICIAL REVIEW

This section establishes comprehensive procedures for informal rulemaking under the Clean Air Act, which would apply in lieu of the Administrative Procedure Act. The section (a) specifies the rules and actions to which such procedures will apply; (b) provides for establishment of a rulemaking docket for each of these rules or actions; (c) describes the material and data that are required for inclusion in the record and mandates that the Administrator must base any rule or other action solely on the information and data contained in the record; (d) establishes the procedures for participation in the rulemaking process, including cross-examination on material issues of disputed fact; (e) provides the standards of judicial review, including the "substantial evidence" test; (f) modifies certain deadlines for promulgation of rules; and (g) extends to 60 days the period of petitioning for judicial review of any such rule.

SECTION 11—AUTHORIZATIONS

This bill authorizes annual appropriations of $200,000,000 for fiscal year 1978, 1979, and 1980.

QUESTIONS AND ANSWERS ON CLEAN AIR ACT WARRANTY LANGUAGE

Question: If we reduce the length of the performance warranty as specified in H.R. 4444/S. 714 how can Congress assure that the vehicle Manufacturers will continue to produce durable emission systems?

Vehicle manufacturers will still be required to produce a durable system in order to pass the 50,000 mile EPA certification test under the production warranty. We propose no change in length of the production warranty. Under the production warranty, the EPA not only certifies that the car's emission control system will last for 50,000 miles, but if a substantial number of systems fail during their on-the-road operation, the EPA can recall the entire lot for repair at the manufacturer's expense. Reduction of the performance warranty will not let the manufacturers off the hook regarding their requirement to produce a durable emissions system.

Question: Doesn't the performance warranty guarantee that the emissions system will perform for five years/50,000 miles?

No, it only attempts to define who will pay for repairs if the system does not perform.

Question: Will consumers lose protection they now enjoy under the performance warranty?

No, consumers do not now have, nor have they ever had, any protection under the performance warranty. In fact, only the EPA, the industry and some concerned attorneys even know this warranty is planned. It has never been implemented because the EPA has not yet developed a correlatable "short test." If it is not significantly altered before it is implemented, consumers will react as they did to the seat belt interlock requirement when they are told that their cars must be repaired at the more expensive dealerships for their first five years of operation.

Question: How does the production warranty work?

If the EPA learns that five or more systems have malfunctioned due to defects in materials or workmanship (as opposed to improper maintenance), it will instigate an investigation which could lead to a recall of all of that model or engine type. This protects the consumer against shoddy workmanship or the possibility that the engines actually produced do not replicate the engine originally certified.

Question: Why doesn't Congress just insist that the manufacturers accept parts and labor from anyone as satisfying the maintenance requirements of the performance warranty?

Because the vehicle manufacturer has a legitimate legal right to protect his contingent liability under the warranty by demanding that adequate replacement parts be used and that they be properly installed. While the issue was being fought out in the courts, consumers would protect their interests by following the maintenance instructions to the letter and the aftermarket would be crippled, perhaps fatally. In addition, it is likely the courts would sustain the manufacturers on this point. It is difficult to believe that the courts would hold that the vehicle manufacturer could be held liable for service work done outside the franchised dealership where a mechanic either put on the wrong part or put it on up side down.

Question: Why not just delegate the authority to correct this problem to the EPA?

Because the EPA has not shown any sensitivity to this threat and because it would just be ducking the issue on the part of Congress. EPA thinks the problem can be corrected with a parts certification program. It can't.

Question: Won't a parts certification program completely solve the problems of the aftermarket industry?

No. In fact, the House Small Business Committee found that the certification program itself was anti-competitive. Their objections: the great cost of even self-certifying will destroy many smaller manufacturers; the vehicle manufacturers could control certification to limit competition; there are expensive problems of due process; and it would require at least partial exemption for the industry from present antitrust laws. Industry has been working with the EPA since 1972 trying to develop a workable voluntary parts certification program. The EPA effort to get a voluntary parts certification program off the ground has been hampered by EPA's proposal to include 430+parts in its definition of the emissions system.

Question: Section 9 of H.R. 4444 defines an "emission control device or system" for both the production and performance warranties. Why?

In November 1976, EPA issued a proposed rule which seeks to circumvent the will of Congress by using a "backdoor" approach through regulations under the production warranty which would in actuality make it into a performance warranty. EPA's intent is clearly expressed in its proposed production warranty regulations when it stated "(the production warranty) could potentially be applicable in some cases where no specific defect was identified; in essence becoming a type of performance warranty." (Federal Register, November 16, 1976, Page 50567). By carefully defining an "emission control device or system" the intended applications of the warranties by Congress are made clear.

Question: What evidence exists that the present 50,000 mile performance warranty has added to the cost of the cars, and has proved anticompetitive, and has induced business away from the independent dealer?

There can be no answer to this question until the 5 year, 50,000 mile performance warranty is implemented by the EPA. The fact is that there is no present 5 year, 50,000 mile performance warranty. The Act provides that when a feasible short test is developed, the EPA shall issue regulations mandating the performance warranty. Since

this has not been done, there cannot be said to be any additional cost added to the vehicle that would be attributable to the performance warranty nor can any anticompetitive effects be measured by something that is not implemented.

We have heard from many different sources that the problems posed by the warranty have not occurred even though the warranty has been on the books for six years. The reason for this is too often overlooked. There can be no problem until the EPA implements the warranty, and this has not been done as at this date. Thus, there has been no effect on competition, nor can there be until the warranty is implemented, but ASIA submits that this in no way means that the problem is not there.

Question: It has been six years since the 50,000 mile performance warranty was written into law. What percentage of the aftermarket business do the non-original equipment dealers presently hold?

This question is closely intertwined with the previous question. The 5 year, 50,000 mile performance warranty has been a part of the Clean Air Act for six years but, and this is vitally important—IT HAS NOT BEEN IN OPERATION FOR A SINGLE DAY—because it has not been implemented by the EPA, there can be no valid comparisons of the respective shares of aftermarket business before such implementation. At the present time, without the performance warranty in effect, free market conditions have the aftermarket doing 75 to 80% of all the repair work in the nation. After implementation of the performance warranty, the consumer loses his freedom of choice and a government mandated monopoly replaces that free market. Immediate remedial legislative action to eliminate this monopolistic effect is vitally needed.

Question: Since the performance warranty has not yet been implemented by EPA, is it a "real" problem to the aftermarket and consumers?

Indeed, the problem hangs very "real" over the head of the independent automotive aftermarket waiting to strike once the EPA develops the short, feasible test required for implementation of the warranty. Make no mistake about it, once the warranty is implemented, the result will be disaster for the independents and monopoly over all parts and services by the vehicle manufacturers. The consumer will suffer tremendously both from substantially increased costs of his vehicle and his loss of freedom of choice as to who services his vehicle and what parts are used. The economic fact of life is that the vehicle manufacturer, once he is faced with the tremendous legal obligation of the performance warranty must include the cost of that obligation in the price of the vehicle and the consumer who must pay that price has no choice except to return to the vehicle manufacturer not only for warranty work, but for all his maintenance and service, since to do otherwise might void his warranty and he cannot risk the loss of his substantial investment, regardless of any niceties in the law which he will not understand, nor will care to understand.

THE U.S. BREEDER PROGRAM IS PREMATURE AND COSTLY

HON. TOM HARKIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. HARKIN. Mr. Speaker, a group of prominent Americans who are recognized as highly qualified and open-minded about the role of nuclear energy has just recommended canceling the Clinch River Breeder Reactor, saying that it is not necessary and may even be detrimental to the long-range prospects of breeder reactors.

This group of noted scientists and economists said that the delay in U.S. commitment to breeders would probably bring economic savings and opportunities to improve breeder development for future deployment. They argued that the present U.S. breeder program is "premature, costly, and will not provide us with optimum choices for our long-term energy future."

The group, called the Nuclear Energy Policy Study Group, made these statements in a report entitled Nuclear Power Issues and Choices, which was sponsored by the Ford Foundation and administered by the MITRE Corp. It included, among other notable scholars. Kenneth Arrow of Harvard University—Nobel laureate in economics—Harold Brown, now Secretary of Defense, Wolfgang Panofsky, director of the Stanford Linear Accelerator Center, Abram Chayes of Harvard Law School, and John Sawhill, president of New York University. In choosing participants the Ford Foundation insisted upon appointment of persons who were recognized as highly qualified in their own fields of investigation and analysis and recognized as open-minded on the general debate raging around nuclear power. Their opinions deserve careful attention.

The analysis of the breeder program is 29 pages long, and I urge every one of my colleagues to read it. I am entering at this point in the RECORD, several paragraphs from the introduction and conclusions of the chapter dealing with the breeder:

BREEDER REACTORS

Fast breeder reactors have long been considered the next step in the evolution of commercial fission technology, since they can extract about seventy times more energy from uranium resources than do the light-water reactors (LWRs) now in use. There is little doubt of eventual technical success in accomplishing this goal, but the economic and social conditions under which breeders might be preferable to alternative energy sources are uncertain.

There is not an impending absolute shortage of energy necessitating early breeder introduction. Breeders should therefore be evaluated on their economic and social merits relative to other present and future energy technologies. Breeders must compete first with existing fission technologies, notably LWRs, and with other converter reactors that might prove competitive. At present, LWRs have a definite economic advantage over breeders. In the absence of plutonium recycle, LWRs also have a significant advantage on domestic and international security grounds. Projections show that breeders will have higher capital costs than LWRs and will be competitive only if and when LWR fuel costs rise so high that breeders can overcome their capital cost disadvantage through a lower fuel cycle cost. Our analysis indicates that, social costs aside, breeders are not likely to develop even a competitive economic edge over conventional fission technologies until well into the next century.

Plutonium breeders involve potentially serious dangers of proliferation, theft and diversion, and of accidents and hazards to health. These risks argue for delay in worldwide commitment to breeders until their economic advantages are decisive. Delay in commitment is not only possible, but probably would bring economic savings and opportunities to improve breeder technology for future deployment. If alternative sources of energy are developed during the early decades of the next century, there is some chance that a commitment to plutonium breeders will not be necessary. If domestic and international security dangers are perceived as very important, breeders could be delayed until at least 2025 without severe economic penalty.

The present U.S. program, like those of other countries, is aimed at commercial introduction of plutonium breeders in the 1990s. In the United States, efforts to establish a broad industrial base for breeder commercialization are now getting underway. We believe that this effort, which goes far beyond research and development, is premature, costly, and will not provide us with optimum choices for our long-term energy future. It is our conclusion that the U.S. program should be restructured to reflect longer-term goals.

Abroad, most notably in France, breeders are viewed as a means of providing for greater independence in energy supply. While this is an argument which bears less weight in the United States with its ample supplies of uranium and coal, the economic conditions for breeder success will not be different abroad if there is a world market in low-enriched uranium which provides assurances and diversity of supply. Autarky through the use of breeders would then be achieved only at higher economic cost. Moreover, independence of foreign energy resources through breeder systems would be achievable for only a very limited number of countries. The large scale of a breeder economy, which requires large numbers of breeders (perhaps fifty to one hundred) to justify full fuel cycle facilities, will be beyond the reach of most countries. Breeder fuel cycle facilities would, therefore, be located in a few advanced countries, involving a form of energy dependence for other countries comparable to that of oil, coal, or uranium. This also implies that the plutonium commerce associated with breeders would be highly international in scope.

CONCLUSION

There is no question that the present version of the breeder stressed in the U.S. program, the plutonium-cycle LMFBR, will successfully generate power. It thus provides insurance against very high energy costs in the future. The hard question concerns the timetable on which a breeder might have sufficient economic merit, compared with other sources, to outweigh the potentially large social costs associated with a plutonium fuel cycle.

On the basis of our analysis, we conclude that there is little advantage in terms of economics or energy supply assurance in early commercial introduction of LMFBRs. Introduction of the breeder may be deferred for ten, twenty, or more years without seriously affecting the economic health or energy security of the United States. As long as there is a world market in low-enriched uranium, a similar conclusion appears to apply to other countries. The social costs associated with breeder introduction argue strongly for deferral.

The relaxation in the breeder timetable recommended here has implications for the nature of the U.S. strategy in research and development on fission alternatives. There is time to pursue a broader research and development program on the breeders and on more efficient converter reactors. Delay will permit the development of more successful breeders should they be needed. In such a program, the Clinch River project, as presently conceived, is not necessary and could be canceled without harming the long-term prospects of breeders. In fact, a premature demonstration could even be detrimental to these prospects.

It is important to continue work on the breeder, with a longer time horizon and an emphasis on its role as insurance. The goal should be to provide a range of more attrac-

tive choices at a series of decision points extending into the early decades of the next century.

HAM FISH, SR., CALLS FOR A STRENGTHENED NUCLEAR DEFENSE

HON. BENJAMIN A. GILMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. GILMAN. Mr. Speaker, today it was my pleasure to welcome back to Washington one of my constituents, former Congressman Hamilton Fish, Sr., who served with distinction in this able body for 25 years from 1920 to 1945.

Ex-Congressman Fish is a man who needs no introduction. His many accomplishments speak for themselves—a great author, historian, orator and congressional leader, a man who cared for his constituents. Let it suffice to say that this 88-year-old gentleman from New York is a good and loyal American, was a hard working, dedicated U.S. Congressman, and remains an active and concerned citizen.

His concern for our Nation brought him to Washington today to testify before the House Committee on Armed Services on the need for bolstering our defense posture. He is still saying things that must be said; and people are still listening to his wisdom.

I am proud that this patriot resides in my 26th Congressional District—just across the river from the 25th District represented by HAM FISH, Jr. I know that his views will be carefully considered by the members of the Armed Services Committee. At this point in the RECORD, Mr. Speaker, I have permission to insert for publication the full text of former Congressman Fish's testimony:

STRENGTHEN OUR NUCLEAR DEFENSE SO NO NATION WILL DARE LAUNCH A FIRST STRIKE

(By Hon. Hamilton Fish, Sr.)

The Soviet Union has produced during the last 12 years, a huge nuclear arsenal of monstrous weapons that can destroy the United States in a first strike and thereby Communize the world. This was and is Lenin's, the only god of the Communists, legacy to them and part of their creed and birthright.

I speak to you as Chairman of the first Congressional Committee to investigate Communist principles, policies and propaganda in 1930, as a student of Communist ideology ever since, and as author of a book entitled "The American People Are Living on Top of a Nuclear Volcano." I am not a book salesman and do not need any royalties. It is based on five years of study and research and relates clearly without fear or favor, the simple truth that the American people are living, unknown to themselves, in a fool's paradise that in case of a first nuclear strike, would dissolve in a cloud of fire, brimstone and ashes and become the graveyard of more than 100 million Americans. Dr. Edward Teller, best known nuclear physicist, said: "We are not prepared. If the Russians attack us, much more than half of our people will be killed."

The American people and the Congress must provide an adequate nuclear defense that will convince potential aggressors not to risk all-out retaliation and destruction.

I am not here advocating superiority, parity or equality but merely to urge a sufficient and adequate nuclear defense that will safeguard the lives of the American people and the existence of our nation. It can be done at very little cost—at approximately three percent of our total military and defense appropriations, or less than the cost of a new Nimitz aircraft carrier, that in case of a first nuclear strike, would be of no help whatever.

The issue is the survival not only of 100 million Americans or more, but also of freedom and religion throughout the world. Every top American and every top Communist in the Soviet Union realizes that we are morally opposed to using a first nuclear strike. But unfortunately that does not mean that a Godless, gangster nation will not use a first strike whenever it is to their benefit and advantage. It is absolutely necessary in order to survive in this nuclear age, that the United States maintain a sufficiently powerful nuclear deterrence as our insurance against both nuclear blackmail and nuclear destruction. I favor the building of additional Trident submarines and of B–1 bombers, but am fearful that many would be destroyed in a first strike on airfields.

We can no longer shut our eyes to the truth—that one of Russia's 300–SS 9's of 25 megaton hydrogen bombs, can wipe out New York City for forty miles around. That being so, with its new SS 18's, likewise of 25 megatons, with 8 MIRVS can destroy 100 million Americans or more, almost in the twinkling of an eye. We have no 25's, or 20's, 15's or 10's—a few obsolete 5's and 1,000 one or two megatons, most of which are not sufficiently protected against a first strike.

The Communist leaders in the Soviet Union have been preparing their enormous offensive weapons for a nuclear war as they think they can win it and that the profits of victory will outweigh the costs. They have already destroyed 30 million of their own people and if they could kill overnight 100 million Americans, while suffering a loss of 10 or 15 million, thus Communizing the entire world, it would be in their interest to do so. Every nation would surrender automatically within a week. China might hold out a little longer, but even they would be forced to surrender or die.

The members of the Politburo at Moscow are not in a position to object if we decommission 100 of our Minutemen and build 100–25 megaton weapons as a deterrence for survival. We should call them liberators for peace. Let Soviet Russia have their 300 huge hydrogen nuclear monsters, enough to destroy the world. But if we had only one-fourth that number ,of 25 megaton weapons for survival, as liberators for peace, well-protected in hidden places and in mountainous caves, no nation would ever dare attack us. Even if they could destroy one-fourth of them in a first attack, the other 75 could destroy all of Russia.

I want to again emphasize that I am not asking for superiority, parity or equality. I am only asking for sufficiency and an adequate number between 88 and 100, 25 megaton nuclear weapons to assure the safety, the lives and the existence of the United States and probably of the free world. Furthermore, when the Politburo at Moscow knows that we have such powerful nuclear weapons aimed at the Soviet Union, they would never attack us. That would end the Soviet's dream of nuclear world domination and open the way for substantial reductions and hopefully ultimately, the abolition of all nuclear weapons by mutual and total inspection.

In Europe, where the U.S. Army faces the tank-led Soviet divisions, Rumsfeld said, "Russian ground and air forces may have achieved blitzkrieg power for the first time". He further said "the Russians and their East European allies can attack Western Europe with 500,000 or more after little or no warning (my emphasis two million). The Soviets now outproduce the United States in tanks, armoured personnel carriers and artillery. He also said their output of tactical fighters, helicopters and navy ships is greater. Coming from far behind the United States, Rumsfeld said, the Russians have built 1,500 land-based intercontinental ballistic missiles (ICBM) compared to this country's 1,054 . . . and 800 submarine launch missiles compared with a U.S. total of 656. With this new family of increasingly accurate long-range missiles, he said the Russians could be in a position to destroy the bulk of the U.S. land-based ICBM force in a surprise attack. Secretary of Defense Brown virtually admits also that our Minutemen could be largely destroyed in a first attack.

In the interview with General Keegan, recently retired head of our Air Defense, he asserted his conviction that the Soviet Union had already achieved strategic military superiority over this country and that the United States was "incapable of carrying out its assigned wartime retaliatory tasks", and that the Russians have established "a significant lead by every criterion used to measure strategic balance."

The Chiefs of Staff made what is in my opinion, the usual noncommittal cover-up. Naturally they are not allowed, permitted or under the circumstances probably should not openly admit the highly dangerous situation confronting the American people. They are in the same position as a coach, assistant coaches, manager and captain of a football team, well known by them to be inferior but they have to publicly state that the team is in good condition, well-trained and will uphold the honor of the college in spite of the fact that it would be dismally defeated. In fact, if the service chiefs told the whole truth—that the Soviet Union has already achieved military superiority—they might be obliged to resign. A Princeton professor of Nuclear Science recently stated that Russia has 6 times the megatonnage explosive power than the U.S.

I am not here to blame them for keeping this terrifying nuclear situation from the public, but of course some unilateral defeatists will use the statement of the Chiefs of Staff as an alibi and excuse for not strengthening our nuclear defense so no nation would ever dare attack us. The Chiefs of Staff avoid a show-down by stating their concern "that recent U.S. and Soviet trends in military programs and Civil Defense could permit the U.S.S.R. to obtain superiority." Then the Joint Chiefs of Staff go on to say "as for an overall Soviet advantage, the Soviets have established a lead over the United States in throw-weight, war-head size and equivalent megatonnage." But they do not agree that the Soviets lead in technology. That is the old and usual alibi. At the same time, the annual Defense Department report FY 1978 issued by Secretary of Defense Donald Rumsfeld, openly admits that "Russian technology has improved greatly in the last few years and is an equal of ours in virtually all nuclear weapons including submarines." The Chiefs of Staff even admitted that General Keegan's statement was correct—that the Soviet Union had begun an effective civil defense shelter program.

Specifically, the Joint Chiefs supported General Keegan's claim about the hardening of the Soviet military command posts, air defense stations, industrial sites and storage bunkers for grain against nuclear attack. They rejected the Keegan assertion that the Soviet Union and the United States might emerge from a nuclear war with 35 to 40 Americans killed for every Russian, but tragically admitted that some current studies indicate the fatality ratio of ten to one Americans to Russians might occur. General Keegan asked to comment on the report, said over the telephone that he was surprised at the degree of support of the Joint Chiefs had

accorded his views. "Obviously," he said, "they could not admit to loss of superiority publicly. No one in our government or armed forces, no matter what they believe, would dare to do so."

It is my honest conviction as a former Colonel in our armed forces overseas and on the General Staff for years, that 90 percent of the retired officers in the Army, Navy and Air Force will agree with the statement of General Keegan. I have made it a policy ever since I left the Congress, 32 years ago, not to appear before Congressional committees to give my views as I believe that Members of Congress have the competency to write their own legislation without any suggestions from me. I did appear once before the Senate Committee on Foreign Affairs for an hour and opposed the SEATO Treaty unless it was amended in the Senate to provide that no troops be sent to the China mainland or Southeast Asia without a declaration of war by the Congress. If this had been done, the war in Vietnam would have ended within a year, as we had the right under International Law to blockade the harbors and if necessary to bomb the enemy country. Senator Pell, a distinguished Democratic Senator from Rhode Island, and a member of the Foreign Relations Committee, discovered my speech many years later, and inserted into the *Congressional Record* a statement entitled, "A Tribute to Hamilton Fish", for having prescience. I went to Harvard but I don't remember learning the use of that word, but I believe it means foresight, and I do know that the balance of his statement was highly laudatory.

Unless we have a strong nuclear defense, we are inviting suicide and the end of the greatest, freest, and very best nation in the world. I do not intend to remain silent on this issue and I would even oppose my own son if he were not in favor of strengthening our nuclear defense to protect the lives of the American people.

Lenin, the god of the Communists, once said, it would not matter a jot if ¾'s of the human race perish; the important thing is that the remaining quarter should be Communists. Maxim Litvinoff, who gave the Soviets' written pledge to abstain from subversion in the United States had this to say: "You know our principles; that promises that we make to capitalistic countries are not binding." General Twining wrote "Russia has manpower to burn and would be willing to burn it for success" and added "the Communist apparatus is so caught up in a web of its own making that if it curtails subversion and aggression and moves towards a genuine basis for freedom and world peace, it would destroy itself."

Karl Marx's idle dream that the state would wither away under Communism has been disproved by 60 years of history. The Soviet bureaucracy, instead, has strangled the freedom of nearly a billion people. Russian Communism is a despotic military dictatorship by a few arbitrary fanatical leaders representing less than six percent of the Soviet people, and nobody knows when they might decide to press the nuclear button.

General Douglas MacArthur, a few years before he died, made it very clear when he said: "I do not anticipate a war with Soviet Russia because as soon as one nation develops new weapons or builds greater nuclear power the other nation is bound, automatically, to equalize the new weapons and the additional power." Unfortunately and tragically he was wrong because we ignored the enormous Soviet build-up of gigantic, new and monstrous nuclear weapons of 25 megatons on a large scale. What we need now is sufficient nuclear weapons of 25 megatons and high destructive power and more new and powerful submarines, but not the present imaginary and false sufficiency.

My old friend, former chairman of your Committee, L. Mendel Rivers, in his last speech said, "I pray to God that the American people and the Congress in particular, will recognize that the fundamental question is national survival."

I appear before your Committee today without any axe to grind, but merely as one who loves this country with all his heart and mind, and firmly believes that the time has come that the American people must know the truth and act accordingly by demanding that the Congress immediately strengthen our nuclear defense to prevent a first strike and the death of 100 million Americans . . . and the balance who might even prefer to be dead. That issue is far greater than any other. Nothing that the Congress can do except to strengthen our nuclear defense will be of any avail in saving the lives of our people and the existence of our nation, and that goes for many other armaments—both military and naval—that could be temporarily put aside until we have an adequate and sufficient nuclear defense. If we do nothing, we invite a first strike of extermination or a disastrous surrender and slavery.

I am very grateful to the far-sighted and patriotic members of the House Armed Services Committee for permitting and inviting me to appear before you to speak on the single greatest issue affecting the security of the United States since the Declaration of Independence. This Committee is in a position, along with the Senate Committee on Armed Services, to do the greatest service to our country in the history of our nation. The issue is very simple—it amounts to survival—the survival of your religion, your homes, your freedoms, your lives and those of your children and your grandchildren and the very existence of the United States. Not more than two or three percent of our people have any idea that the Damocles sword of nuclear fire and brimstone that hovers over them may explode at any time within the next few years. All I am asking, in behalf of the American people, is that you give priority to strengthen our nuclear defense.

This is the theme of my remarks, repeated again and again because the American people have recently been subjected to the greatest cover-up in history and have little knowledge that their lives are at stake in an avalanche of monstrous deadly hydrogen bombs. Khrushchev once said: "We must realize we cannot co-exist eternally. One of us must go to the grave. We must push them into their own grave." In conclusion I call to the attention of this important and powerful Committee the famous words of Abraham Lincoln: "To sign by silence when you should protest makes cowards of men."

CIVIL ENERGY FROM LASER FUSION, A GROWING REALITY

HON. CARL D. PURSELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. PURSELL. Mr. Speaker, with this extension of remarks I am inserting the second of a series of installments regarding laser fusion and its possibilities for helping us solve our energy crisis. Last week, I inserted in the RECORD, two newspaper articles regarding a significant development in laser fusion. The substance of today's installment is the press release from Los Alamos which generated the two articles:

[From the Los Alamos Scientific Laboratory of the University of California Los Alamos, N. Mex.]

FUSION REACTIONS PRODUCED WITH CO_2 LASER

LOS ALAMOS, N. MEX., March 2, 1977.—Scientists for the first time have successfully used a carbon-dioxide (CO_2) laser system to produce a fusion reaction. Labeled a milestone, the achievement was reported by researchers at the Los Alamos (N.M.) Scientific Laboratory (LASL), who used the world's largest CO_2 laser system to induce thermonuclear reactions in microscopic fuel targets.

The experiment, according to Dr. Gene McCall, alternate division head of LASL's Laser Research and Technology Division, "presents the possibility that the CO_2 laser may indeed be the laser of choice for future laser-fusion power reactors."

Dr. Sidney Singer, chief of LASL's CO_2 Laser Systems Development Group, explains the significance of the event by saying, "It clears away an obstacle in deployment of carbon-dioxide lasers for fusion energy production."

The ideal fusion reactor laser system should have 3 essential elements, he explains. It must be efficient, it must have a high repetition rate, and, as it had been thought, it must have a short wavelength so that most of the laser's power is deposited close to the fuel pellet target for maximum effect. In addition, any such laser must be capable of being "scaled up" in size, to produce the huge amounts of energy needed for useful laser fusion.

Dr. Singer says the carbon dioxide laser has long been known to have 2 of the 3 essential elements. It has efficiency and a high repetition rate. In addition, he says, there are no realistic limits to the size of CO_2 systems. However, the carbon-dioxide wavelength, which is in the middle infrared segment of the spectrum (at 10 micrometers), has appeared undesirable, compared with the other leading contender for a fusion reactor system, the neodymium glass (Nd) laser.

"The glass laser operates at 1 micron, but it lacks the efficiency of the CO_2 laser and it also lacks the high repetitive capacity essential to sustained fusion reaction for power generation," Dr. Singer says.

"Now that we have induced fusion reactions in pellets using a CO_2 system, we have confirmed our contention that the comparatively long wavelength of this laser does not present a problem."

LASL's major effort in laser development has been in carbon dioxide systems, although some work has been done in both Nd and chemical lasers.

Dr. McCall says, "The success of the experiment was made possible by more than 5 years of concentrated theoretical and experimental work carried out by all of the groups in the Laboratory's Laser Research Division."

Dr. Singer sums up the recent achievement by saying, "A series of experiments which begin in October, 1976, when the two-beam CO_2 laser under development at the Laboratory was first used for target interaction, culminated in the detection of an unmistakable flux of 14-MeV (million-electron-volt) neutrons that are characteristic of thermonuclear processes (fusion reactions)."

Both scientists say that LASL researchers have long believed that wavelength was not an insurmountable obstacle to the achievement of fusion reactions.

"Our data implies that where the laser energy is deposited in relation to the target is not the limiting factor that it was theorized to be," they say.

A thermonuclear reaction was achieved when the 2 beams that comprise LASL's carbon-dioxide laser system each delivered about 200 joules of energy in 1 nanosecond (a billionth of a second) to a spherical target filled with deuterium-tritium (heavy isotopes of hydrogen) fuel. A joule is a unit of energy, specifically, 1 watt of energy delivered in 1 second. Dr. Singer says the LASL system will ultimately be capable of delivering up to 900 joules of energy, possibly within a year.

Development of CO_2 laser systems at LASL began in 1970, expanding a small program in existence since 1963. The two-beam sys-

tem with which fusion reactions were obtained is part of an integrated program involving development of an eight-beam system which is scheduled for completion in 1978, and the construction of a High Energy Gas Laser Facility (HEGLF), where it is hoped "scientific breakeven" fusion can be demonstrated. Breakeven is that point at which the energy extracted from fusion reactions is equal to the energy it took to produce them.

The HEGLF is now in the design stage. Construction should begin later this year, with completion scheduled in 1981.

The ramifications of the LASL achievement are important, McCall and Singer stress. McCall says, "For current lasers of a given power output (watts of energy delivered to a target), the CO_2 is more than 10 times as efficient as a neodymium glass laser at about one fourth the cost."

Dr. Singer adds, "The technology of the carbon-dioxide system is the most attractive of existing ultrahigh-energy systems, and although there are practical limits to scaling them up to the size needed for a fusion reactor, we feel we are well within these boundaries in the systems under development at LASL."

The researchers say the two-beam fusion demonstration may "lop 10 or even 20 years from the generally accepted time required for development of a fusion reactor (usually placed early in the next century), and ultimately result in a considerable dollar saving."

A laser system for a typical 1000-megawatt electrical generating plant would probably have to deliver as much as one million joules of light energy on target in less than 1 nanosecond. Repetitive firing of laser beams in rapid sequence, to deliver precise amounts of light energy on a succession of tiny deuterium-tritium fuel pellets, is the method most researchers envision for fusion reactors of the future.

LASL is operated by the University of California for the Energy Research and Development Administration.

U.S. POLICY IN HORN OF AFRICA

HON. DON BONKER

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. BONKER. Mr. Speaker, as a complex and explosive situation continues to develop in the Red Sea area, I think it is useful to have in mind two official statements of present American policy—which I do not necessarily endorse: First, testimony by Assistant Secretary of State Schaufele before the Senate Subcommittee on African Affairs on August 6, 1976; and, second, an explanation of a vote in the United Nations, by Mrs. Ersa Poston, U.S. Representative in Plenary, on December 1, 1976:

U.S. POLICY TOWARD THE HORN OF AFRICA

IMPORTANCE OF THE HORN OF AFRICA

The strategic importance of the Horn of Africa has gradually increased over the years. Located on the Strait of Bab el Mandeb it has always controlled access to the Indian Ocean by the coastal states of the Red Sea. Since the completion of the Suez Canal it has enjoyed a dominant position on one of the world's leading East-West maritime routes. In recent years the importance of the area has been further increased by its proximity to the Middle East oil fields and the Indian Ocean oil routes.

REGIONAL RELATIONS IN THE HORN

The Horn of Africa is characterized by the strained relations which have existed for a long time between the Somalis and the Ethiopians. Since attaining independence in 1960 Somalia has maintained a claim on large areas of Ethiopia populated by ethnic Somalis, as well as areas of Kenya and of the French Territory of the Afars and Issas (FTAI). This ancient hostility has been further exacerbated by Somalia's decision to turn to the Communist states, and particularly the Soviet Union, for economic and military assistance, as against Ethiopia's traditional ties with the West. The Ethiopian-Somali rivalry has been most recently fueled by the French decision to grant independence to the FTAI, whose capital and deep water port of Djibouti dominates the Strait of Bab el Mandeb. The new revolutionary regime of Ethiopia, already beset by an insurgency in the coastal province of Eritrea, and going through the travails of internal radicalization, greatly fears a Somali attempt to dominate or take over the post-independence FTAI, thus further impeding Ethiopian access to the sea. The rivalry over Djibouti and the outcome of the Eritrean secession and of Ethiopia's internal turmoil are also of importance to the coastal states of the Red Sea in view of their interest in continued and unimpeded access to the Indian Ocean. Finally, other states in the region such as Sudan, Saudi Arabia, Egypt, Israel and Kenya are concerned by the threat that political instability and increasing Soviet influence pose to the region.

U.S. INTERESTS IN THE HORN

The strategic importance of the Horn has led the United States to place high value on good relations with the countries of the area, access to ports and airfields, and regional stability. U.S. acquisition of a communications facility at Kagnew in Asmara in 1942, which was subsequently greatly expanded, also contributed to our interests in the area. At the present time our access to the area has been restricted essentially to Ethiopia and Djibouti, while major Soviet military facilities such as we enjoy nowhere in Africa have been constructed at Somalia.

U.S. RELATIONS WITH THE COUNTRIES OF THE HORN

Ethiopia

Our interests in the Horn of Africa were in the past concentrated on Ethiopia. As one of the few independent black African countries throughout the colonial period and as an ancient Christian kingdom it has long held a special fascination for Americans, strengthened during the 1930s as a result of its victimization by fascist colonialism. During the early post-World War II period our interests in Ethiopia were primarily continental and bilateral. We hoped that our longstanding relationship with Ethiopia would assist us in establishing good relations with the newly independent states of Africa, we developed our important communications facility at Kagnew in Asmara, and we benefitted from access to Ethiopian ports and airfields.

In the past few years the relationship with Ethiopia has also acquired increased regional and strategic importance. Although we have, over the past five years, reduced the number of employees from 3,000 to 35, the Kagnew Communications Station remains important to us, as does access to Ethiopias' airfields and ports, at a time when our interests and operations in this increasingly important area have grown. For these reasons, among others, although we remain concerned by the present disunity of the country, we have taken particular care to demonstrate by the constancy of our relationship that the ties between the United States and Ethiopia need not be disrupted by a change in its form of government.

We believe that our present policy toward Ethiopia will not only contribute to the stability of this second most populous country in black Africa but also assist black African states in maintaining the principle of territorial integrity, a cardinal principle of the Organization of African Unity. We believe we would incur much criticism from our friends in Africa and elsewhere were we to withdraw support from the Ethiopian Government during this time of difficulty—such a move would also be attributed to distaste for Ethiopia's brand of socialism. We are well aware that our military aid is a two-edged sword and that it is a major support of the present government with whose actions we do not always agree, particularly in the field of human rights. However, for the reasons given above, although we have conscientiously refrained from any advisory effort in the Ethiopian counter-insurgency operations, we have continued to supply Ethiopia with arms in accordance with our military assistance agreement with Ethiopia, which dates from May 1953.

The extent of our relationship with this nation of 28 million can be measured by the amount of aid we have provided. This has amounted to over $350 million in economic aid since 1952 and over $275 in military assistance to the country's 40,000 man defense force.

Whether we can continue this degree of cooperation with Ethiopia will depend largely on the course finally taken by the new revolutionary military regime which assumed power in 1974. It has deliberately decided to alter Ethiopia's previous reliance on the West, and has consequently strengthened its relations with the Socialist countries. To the extent that this does not lead to systematic opposition to the United States, it still leaves ample opportunity for continued cooperation, particularly as we are sympathetic to many of the new regime's ambitions to improve the living conditions of its people. But the situation is sufficiently volatile to bear close watching.

Somalia

Somalia is a country of 3.2 million people with an army of approximately 20,000. Composed of former British and Italian Somaliland, it gained its independence in 1960. Somali nationalists continue to claim the Somali-inhabited portions of northeast Kenya, eastern Ethiopia, and the French territory of the Afars and the Issas. Following independence, Somalia and the United States enjoyed a close and friendly relationship and the U.S. extended almost $80 million in aid between 1954 and 1970. However, following the overthrow of the civilian government in 1968, the Government of the Somali Democratic Republic turned increasingly to the Soviet Union both for military equipment and for economic and ideological support. In the process, our own relations with the Mogadiscio Government deteriorated and in 1970 the U.S. Government was obliged to terminate its aid program because of continued Somali-flag trade with North Viet-Nam. Nevertheless, we have sought to improve relations with the Government of the Somali Democratic Republic and to find grounds for mutual respect and cooperation. We have assured the Somali Government that their proclaimed policy of nonalignment is one with which, if impartially conducted, we have no quarrel. We also recently renewed economic assistance to the country and have aided Somalia in its attempts to recover from the recent drought. This summer Somalia is receiving 10,000 metric tons of relief grain. I must admit in all candor, as I have informed the Somali Ambassador in Washington, that we have not recently seen any reciprocal Somali gestures.

French Territory of the Afars and the Issas

The French Territory of the Afars and Issas has a population of approximately 180,000 divided between the Afar or Danakil people whose primary home is in Ethiopia, and the Issas and other Somali tribesmen. The French decision to grant independence to Djibouti has increased the tension between Somalia and Ethiopia. The railhead and port of Djibouti are vital communication links for Ethiopia. On the other hand, it is clear that some Somali nationalists are using the occasion to work for conditions which could lead to the eventual incorporation of the Territory into Somalia. The common distrust of the Ethiopian and Somali governments, and the traditional Somali claims on much of eastern Ethiopia make cooperation between these two governments in support of the independence of Djibouti a difficult undertaking. Political developments leading to independence have included the kidnappings of the French Ambassador to Mogadiscio by Somali nationalists, the capture of a school bus of French schoolchildren by another group of nationalists in February, and extensive political agitation against the former President of the FTAI Government, Ali Aref. He was finally forced to resign on July 17 and a replacement was elected by the FTAI Chamber of Deputies on July 29. Although an Afar, the New President, Abdallah Khamil, is thought to enjoy greater support among the Somali population than did his predecessor, and stands a better chance of leading a government of national unity to independence which will probably be granted within the next year. For our part we support the peaceful transition to independence and we encourage the states of the area to create the conditions necessary to maintain the long-term independence of Djibouti. In doing so, we join our aspirations with those of the international regional organizations and a number of states in the area, as well as with the governments most directly concerned.

Kenya

Because of the territorial dispute between Somalia and Kenya over the northeastern region of the latter, relations between Nairobi and Mogadiscio were not established until 1968. We have recently been led to agree to military sales to Nairobi, in part because of the discrepancy between the size and level of equipment of the armed forces of the two countries, and in part because of the Uganda threat to western Kenya. The addition of military sales fits in well with our previous relationship to Kenya. We have always found a cooperative reception in this stable country which has one of the few free economies in that region and is the only country on that part of the Indian Ocean which permits U.S. Naval visits.

Sudan

Our relations with the Sudan took a turn for the worse in June 1974 when the Sudanese Government turned over to Egypt the eight Palestinian terrorists whom Sudanese courts had convicted of killing, in 1973, our Ambassador and Deputy Chief of Mission in Khartoum. After nearly two years during which we suspended most of our bilateral programs with the Sudan we have now embarked on a course of normalizing our relations, on the grounds that the deliberate cooling of our relationship had lasted long enough and in recognition of the considerable assistance brought to us by the Sudanese Government in obtaining the release of American prisoners held by the Eritrean insurgent movement, which is in rebellion against the Ethiopian Government. We considered that further prolongation of the stand-down in our relations risked permanently jeopardizing our ability to build a cooperative relationship with this country which is of importance to us in both the African and Middle East contexts, and which has considerable economic potential. The convicted killers are still in Egyptian custody.

STATEMENT BY MRS. ERSA POSTON, U. S. REPRESENTATIVE IN PLENARY, IN EXPLANATION OF VOTE AFTER THE VOTE, ON DJIBOUTI, DECEMBER 1, 1976

Although the United States has abstained in the vote on the Djibouti resolution, we find the resolution in many respects to be a significant contribution to the passage of Djibouti to independence.

We are encouraged by the support which the steps announced by France have generally received, and we hope that this will enhance the possibilities for a peaceful transition to independence. We believe it is important to use this forum to support French efforts rather than to make unrealistic demands. Accordingly, we have reservations about operative paragraph 7. Until independence, France remains responsible for the security of the Territory and, until then, security decisions should be left to her judgment. After independence, the question can only be properly addressed by the successor government.

That being said, my government concurs in a number of points made in the resolution, particularly the reference to the solemn declarations of the Ethiopian and Somali delegations to recognize, respect, and honor the independence and sovereignty of Djibouti and its territorial integrity after its accession to independence. Given the geography and history of the area, we understand the concern of neighboring states and we therefore support moves by all parties to foster the long-term independence of Djibouti. At the same time, we wish to associate ourselves with the call upon all states to refrain from interfering in the internal affairs of the Territory and to abstain from any action likely to impede or adversely affect the present processes of the country's accession to independence.

We would urge, as this resolution recommends, that all member states, the specialized agencies and other organizations cooperate with the administering power to render all possible moral and material assistance to the people of the Territory. We are encouraged by the fact that Somalia and Ethiopia have cojoined to sponsor a common resolution, and we hope that further cooperation by all concerned will permit us to welcome the representatives of an independent Djibouti to the family of nations.

IT WILL BE BETTER NEXT YEAR

HON. JAMES ABDNOR

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. ABDNOR. Mr. Speaker, since the beginning of our Nation's history, the fortitude of our people in withstanding adversity has been its remarkable strength. Hardship, whether at the hands of Mother Nature or some other source, has always been faced with "it will be better next year." Such faith in the future has enabled our people to get through some remarkably tough times. It is this faith that is seeing the people of South Dakota through the worst drought in its history as well as other economic vicissitudes we have seen this past year.

The spirit of our people is demonstrated in a recent Associated Press feature, which I would like to share with my colleagues:

[From the Pierre (S. Dak.) Daily Capital Journal, Mar. 3, 1977]

MORT HAMILTON, KEN SUTTON TALK ABOUT RANCHING

(EDITOR'S NOTE.—The romance of home on the range is giving way to convenience and economics. The loneliness of the prairie is bridged by the telephone and color TV. But ranchers there are and, most of them say, ranchers there always will be.)

(By James Carrier)

BELLE FOURCHE, S.D.—Kent Robinson is a real cowboy. He wears the boots and the hat. He rides a horse and calls the cattle on his 3,000-acre ranch "doggies."

He also manages his herd by computer, reads Newsweek through bifocals and spends hours in an office in a $55,000 all-electric home.

His three children are learning the ropes of handling cattle, but they like to get out of the barn by 4 p.m. to watch reruns of Dobie Gillis on television.

The Robinsons are a ranching family in what the rest of America calls "The West." The Marlboro man lives here. Cattle are still branded, time is measured by the season, and they and their neighbors are only a generation away from the characters who shot their way into legends in the nearby towns of Deadwood and Sundance.

Ranchers say there is nothing like riding across your own land on a still summer night. You're your own boss, they say, and not too many people are anymore. But in the same breath they say they are beholden to the banker and have lost control of the market. They often speak of the pressures, the push, the lack of time.

To the Robinsons and hundreds of families like them who raise cattle on vast tracts of land, ranching is no longer just a way of life. It is a business.

If Robinson rides off into the sunset, it's because he has put in a 12-hour day doctoring new calves in the winter pasture and he's late for supper. And he's more likely driving a pickup truck, not riding a horse.

John Morris, who runs a 15,000-acre ranch seven miles from Cheyenne, Wyo., says he doesn't have time to spend on a horse. "It seems in the ranching business, bureaucracy and red tape keep someone on the telephone, going to the bank and managing—strictly business. So you find yourself more and more riding in a pickup, working behind a desk. There are just getting to be so many regulations, so many little reports . . ."

But each spring, the hassle of little reports and regulations fades as the rancher gets down to the heart of his effort.

Robinson's basic herd of 150 head, bearing the diamond-bar-E brand, swells to 400 with the birth of calves. It's his toughest time. The calves, dropped into the March snow, can catch pneumonia unless they are bedded onto straw and encouraged to rise.

He goes to bed at 10 p.m., rises at 1 a.m. and again at 4 to check on the new ones. Each calf might bring him $1,200 in 18 months, and as they grow, Robinson keeps careful records. The data, run through a Hereford association computer, tells him which calves perform below the herd norm. Those he culls.

Ranching, of necessity, is a big, remote business. The western ranges are good for little else but cattle or sheep grazing. In the arid northern Great Plains near Belle Fourche, soil experts recommend that each head of cattle be given 15 to 20 acres to graze. Any less would ruin the land.

With a basic purebred herd of 150 head, each requiring 20 acres, Robinson's 3,000 acres which stretch four miles along the Wyoming border near the geographic center of the United States, are barely enough.

The U.S. Agriculture Department says that

the average Northern Plains cattle ranch is about 11,500 acres. In the Southwest the average land base is about 18,000 acres.

Traditionally, ranches are calving grounds for America's voracious beef appetite. But in 1975, USDA estimates showed that they produced less than 40 per cent of the 43.7 million calves. The rest came from farms where cattle are part of a crop-animal operation and herds number less than 100 head.

The people who persist on the ranches, who have not abandoned the beef market for more lucrative wheat and corn, do so because they want to. And their persistence is never better tested than in the winter.

"There are times when we're snowed in two or three days at a time. But you don't have to punch a clock at 8 o'clock in the morning," said Morris. "You do what you have to do. Livestock has to be fed. If you take care of them, they take care of you."

This winter has been unusually cold but dry, without the usual blizzards on the Sourdough Flats behind Robinson's barns. Each morning, Kent trucks 3,000 pounds of hay to the winter pasture, a canyon filled with ponderosa pine and craggy shelter. He and his hired hand break the ice on the stock ponds.

"We've had 20 below quite a few nights," he said. "The cattle know which side of the canyon is out of the wind. But you've got to increase the feed when it's that cold and watch your water lines."

Throughout the West, a two-year drought appears to be continuing. There is little snow in the mountains for the reservoirs and none on the plains. The inevitable winds are blowing dirt instead of snow and breaking off short grass.

When blizzard conditions exist, the Robinsons and others subsist. If the power is off, they cook on a wood stove and bed down at dark. They have home canning, the morning milk and plenty of meat to keep them going.

But many ranchers with school-age children must abandon the ranch during winter or board their children in town. Either the schools are too far away or they teach only through junior high.

In many places, too, telephones are few and far between, and mail boxes can be miles away. For Ken Sutton, son of an old ranching clan in South Dakota, the only telephone system until 1969 was an eight-party company maintained by neighboring ranchers which hooked into an intermittent tribal line on the Standing Rock Indian Reservation.

But while Sutton and others cope without things the rest of America considers necessities, he found necessary what many consider a luxury—a private airplane.

"I had an airplane most of the time when I was there," said Sutton, who in 1972 turned to more profitable wheat farming. Sutton used his 90-horsepower plane to pick up parts in town, to hunt and to check pastures. One summer pasture was 6,400 acres and took an hour and a half to check by air.

"If I rode a saddle horse, I probably wouldn't get home for dinner," he said.

Airplanes also allow ranchers to escape their isolation.

The image of the land baron, the jet-set rancher, is true of only a minority. The average rancher leads a quiet social life—card parties, barbecues and bowling.

Eight miles from town, Barbara Robinson says she likes her life. "I don't feel isolated. I don't miss anything other than afternoon or morning coffees with the ladies, which I've never been used to."

The Robinson children, 11, 13, and 15, ride a bus to Belle Fourche schools, and except for their chores, have all the interests of any suburban child.

Ranchers say that ranch life is ideally suited to rearing children.

"They are not as sophisticated as city children, but they are more mature," said Mercelyn Hamilton, who runs a 7,000-acre spread near Hayes, S.D., with her husband. "They do things younger than most kids because they have to. They often raise their own cattle, show them at fairs and work long hours."

"The kids have more freedom and enough to do," said Robinson. "They know what work is, and they never get bored. If they do, I send them to the windbreak with a hoe."

But Robinson and his neighbors, many also second-generation ranchers, fear that their children may not want to carry on the family business, or be able to.

"We have advised our kids to learn something else, to learn another trade and to learn more about business," said Morris. "I think they would all love to come back to the ranch. I hope they can. But for young people to think of nothing but this is very, very foolish."

Land values and crippling estate taxes have kept many young families from ranching. The average rancher age is inching upward in South Dakota, and is now 50.5 years.

Ranches bought after the depression for 50 cents an acre, or the cost of delinquent taxes, now sell for $125 per acre.

"I don't think you can find a better life in the world than being a rancher," said George Kane, who has been in the business for 40 years. "It boils down to how many people can afford that kind of life. It's probably out of the picture for most people. It will have to be love and affection of land from one generation to another or somebody will have to have a lot of money."

But passing from father to son can be costly, and ranches sometimes must be sold to pay inheritance fees because there is no cash.

The Robinsons live comfortably, but they are not rich. Like most ranchers, their money is on the hoof or under pasture.

"I've acquired some wealth, but it isn't liquid," said Robinson. "A lot of places are well off, but if you hit them for $1,000 they'd have to go to the bank and borrow."

If Robinson were to cash it in, the ranch he shares with his father would be worth $1 million. As Sutton says. "It's sometimes difficult to feel sorry when you're worth a million dollars."

But the cattle business has been marginal. Inflation has driven equipment, labor and feed costs up and beef prices have not kept pace. A debt of $200,000 is not unusual in ranch country.

"The profit margin is so low that only the most efficient can survive," said Rod Horn, vice president of Production Credit Association of Lemmon, which lends money to ranchers.

"The average investment for a farmer-rancher in western South Dakota is three times that of the businessman on Main Street ($500,000). But his return is down to one or two per cent," said Horn.

The rancher also has fixed costs he didn't have 40 years ago. "The ranch is modernized, there is a monthly light bill," said Kane. "You used to grow your own vegetables, you had all the things you needed for self-support—milk, cream and butter. But this isn't the case anymore. The monthly bills come in like any other segment of the population.

"I can't see a rosy future for the family ranch," says Horn. "It will have to be run as a business, not as a way of life."

But the rancher, Morris says, "is the biggest gambler, the hardest head in America. He'll never give up."

Or, as one ranch wife put it, "we live in a big next-year country."

THE PAPERWORK BURDEN: ONE EXAMPLE

HON. PAUL S. TRIBLE, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. TRIBLE. Mr. Speaker, I would like to direct the attention of my colleagues to the burden which Federal paperwork is now placing on our economy.

We have known for years that Federal paperwork has been an increasingly heavy nuisance to small business. Recent studies have shown that this nuisance now costs the ultimate consumers $50 billion a year.

This $50 billion is made up of millions of forms filed out and millions of man hours wasted.

One of my friends wrote me recently, telling me how the paperwork burden forced his company to drop out of consideration for a small Government contract. The following letters tell the story:

AMERICAN INTERNATIONAL RENT-A-CAR,
Newport News, Va., February 11, 1977.

Hon. PAUL S. TRIBLE, Jr.,
U.S. House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN TRIBLE: On December 1, 1976, we were the low bidders to furnish government travelers 2 sub-compact automobiles when visiting the Peninsula area and 3 other sub-compacts when necessary in the Richmond area. This bid was through General Services Administration Bid No. 1FB3FPB6R4088, and was to begin on March 1, 1977. During Christmas week, we were visited by a representative of GSA and were not advised of any problem with the contract being awarded. On January 26, 1977, at the request of Ms. Pomerantz, the contracting officer, we agreed to extend the time limit of our bid until April 1, 1977.

We have had no further contact with anyone from GSA, but did receive a telephone call from the writer of the enclosed correspondence on February 7, 1977 inquiring if we desired to appeal the GSA decision to reject our bid. We had not been informed that our bid had been rejected, but if it had, then we certainly did want to appeal. On Wednesday, February 9, 1977, we received the enclosed package.

After screening the information requested, we decided that the benefit of the GSA contract for 2 sub-compacts on the Peninsula and 3 at Byrd Airport could not possibly outweigh the man hours necessary to report everything the Small Business Administration had requested.

I am forwarding this to you only because it was one of the things you touched on when you met with us in the legislative committee of the Peninsula Chamber of Commerce.

We are following with interest your progress in Congress and can only say—Keep up the good work.

Sincerely,

RALPH J. CROSS,
President.

SMALL BUSINESS ADMINISTRATION,
February 7, 1977.

Re Certificate of Competency.
Attention: R. J. Cross.
R. CROSS, Inc.,
T/A American International Rent-A-Car,
Newport News, Va.

GENTLEMEN: This letter is to advise you that the contracting officer has found your

firm to be non-responsible on the subject procurement. The Small Business Administration has been notified of the circumstances so that we may perform an independent survey to consider the issuance of a Certificate of Competency (COC).

The COC program is, in effect, an appeal procedure available only to a small business concern whose bid for a government procurement has been found to be non-responsible by the contracting agency based solely upon its findings that the firm lacks the necessary capacity and/or credit to successfully perform the contract. In an appeal, it is the responsibility of the small business concern to clearly demonstrate its competency (with sufficient documentary evidence and within the time limit) to obtain affirmative certification by the Small Business Administration.

The enclosed pamphlet will explain the COC Program of this Agency. Also enclosed are Forms 74, 74A, 74B, 355 and 912 for use in applying for a COC. A List of Data Requested is attached which is intended to assist you in presenting to us your production and financial capabilities to perform the proposed award.

Because of the short time limit allowed SBA to process a COC referral, it is imperative that these forms and Data Requested be completed and the number of copies required be submitted to reach the offices shown at the end of this letter no later than 4 p.m. on February 15, 1977.

If outside financing is required to function this proposed award, it is recommended that you contact your bank of account and the SBA District Office immediately.

If complete and acceptable forms and documentation are not submitted within the time frame specified, we will assume that you do not wish to appeal, and the contracting officer will be so notified in order that he may proceed with making an award. Specified questions regarding this COC application should be directed to the writer at 215/596/5978.

Sincerely,

H. P. MILLER,
COC Specialists.

ACTS OF BRAVERY BY TWO YOUNG PEOPLE

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. BROWN of Ohio. Mr. Speaker, two very uncommon acts of bravery were brought to my attention recently. These acts are unusual because they were performed by an 11-year-old girl, Violet Snell, and a 9-year-old boy, David Stinson, both of Fairborn, Ohio. Both of these young people acted in separate incidents to save the lives of others.

Violet Snell's quick action saved the lives of her three sisters when fire raged through their home. Young David Stinson was courageous enough to save the life of his invalid aunt from a fire she had started by accident.

I am most pleased to insert in the RECORD two articles from the Fairborn (Ohio) Daily Herald which describe these two feats of bravery. These young people have set the glowing example of calm, intelligent action in the face of danger, that young and old might do well to follow:

[From the Fairborn (Ohio) Herald, Feb. 4, 1977]

YOUTH SAID HE DID NOT PANIC WHEN FIRE THREATENED HIS, HIS INVALID AUNT'S LIFE

(By Margaret Grube)

Within two weeks, in two incidents of fire, two young Fairborn children have saved the lives of relatives.

The latest happening occurred Wednesday when 9-year-old David Stinson put out the fire at the home of his invalid aunt, Elvia B. Robbins, 152 Loretta ave. On Jan. 20, Violet Snell, 11 years of age, saved the lives of three of her sisters when fire gutted their home at 48 Rowland dr.

It's very unusual to have two instances like this within two weeks, commented Fire Chief Robert Johnson. He said the department probably will recommend both children for an award.

At the same time the chief cautioned anyone wearing a gown or clothing with nylon content to be extremely careful around open flame. "It only takes a second to ignite," said the chief, noting that a person wearing a garment with flared sleeves can easily catch the sleeve on fire simply by reaching over a lit burner on a range. "Be especially careful with cigarets," the chief added.

He also recommended that people know what to do when a person's clothing has caught on fire. "Put the individual on the floor, throw a blanket or anything over them and roll them to smother the flame," he said.

David, a third grade student at South elementary school, was visiting his aunt, a semi-invalid, when the fire occurred at her residence.

She was trying to light a fondue pot, David said, with a piece of paper towel. He said the pot was heated with canned heat. She couldn't get it lit so she pulled the paper towel out and another piece of paper towel nearby caught fire. It fell on the floor catching a rug on fire, a mat on the chair, then Mrs. Robbins' gown.

"She told me to move the table out of the way and I dragged her out of the chair, laid her on the floor. She told me to go out and yell 'fire.' I did but no one would answer.

"She told me to get a bucket. There was no bucket so I took the trash out of the trash can and filled it full of water. We called the fire department and I started to put out the fire. It was out by the time the fire department came. They got all the smoke out of the house."

Mrs. Robbins is in Miami Valley hospital with second and third degree burns on a leg and thigh. Firemen at the scene gave her first aid and then transported her first to the Air Force medical center, Wright-Patterson AFB, and later to Miami Valley hospital where she remains in fair condition today.

Firemen say she could have been fatally burned if it had not been for her nephew who said he didn't panic. Firemen also said because of her disability, had she been alone, she probably would have died in the fire.

Asked how he felt about being able to save someone, David, the youngest of four Stinson brothers, said:

"I feel proud of myself."

[From the Fairborn (Ohio) Daily Herald, Feb. 3, 1977]

YOUTH SAVES LIFE OF INVALID AUNT

A nine-year-old boy was credited with saving the life of his invalid aunt after her clothing caught fire late Wednesday afternoon.

The boy, David Stinson, was visiting his aunt, Alvea Robbins, 152 Loretta ave. It was reported she attempted to light a fondue with a piece of paper towelling and the paper fell into a waste basket starting it on fire.

Ms. Robbins, who is confined to crutches, came too close to the blaze and her gown caught fire. She reportedly fell to the floor and her nephew grabbed a pan of water dousing her burning clothing and also the fire in the waste basket.

In the meantime the fire department was called and arrived at the apartment at 5:56 p.m. They had been informed a woman was trapped in the burning building.

When they arrived they found the fire extinguished and Ms. Robbins suffering from severe burns. She was given first aid by the Fairborn rescue squad and taken to Air Force medical center, Wright-Patterson AFB and later transferred to Miami Valley hospital where she was reported in fair condition today.

Firemen at the scene said she could have been fatally burned if it had not been for the quick action of her nephew. Because of her disability if she had been alone she would probably have died in the resulting fire.

After the apartment fire was secured and Ms. Robbins taken to the hospital, Fairborn police cared for the youngster until his parents came to pick him up and take him home.

CAUTION IN ZAIRE

HON. ROMANO L. MAZZOLI

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. MAZZOLI. Mr. Speaker, last week, the Carter administration announced that it had sent an emergency airlift of military and medical supplies to Zaire to help it repel apparent military thrusts by Angolan-based forces.

Administration officials contend that these shipments are of moderate size and consist only of supplies "already in the pipeline" as part of the $30 million in American military aid Zaire is scheduled to receive this year.

These statements notwithstanding, I will have grave doubts about these actions. When one considers the "worst case" outcome of our Nation's involvement in Zaire's border war, visions of another Vietnam keep coming to mind.

President Carter must proceed cautiously here. He has not consulted as fully with the Congress about his actions as I would have hoped. Certainly any action, other than expediting the movement of supplies to Zaire, should not be taken without full, frank, and prior consultation with the Congress.

I would like to call to my colleagues' attention the following two editorials which recently appeared in the Washington Post:

[From the Washington Post, Mar. 16, 1977]

WHY ZAIRE?

True, Zaire is one of Africa's largest and most populous and relatively most moderate states and it's been more friendly than not to American political and economic interests for nearly two decades. True, it deepened its claim on Washington by lending itself to the previous administration's secret involvement aborted when revealed, in the Angolan civil war. True (or so it appears) it's in some trouble at the moment now that Angola, tasting revenge, seems to be sponsoring attacks on the old Katanga part of Zaire (the

former Congo) by separatist-minded Katangese. And, true, it's better that the new administration should send emergency military aid openly rather than again go down the CIA path. Two planeloads of military gear were dispatched yesterday.

It's still a highly dubious proposition for the United States to deepen its involvement in the murk of Zaire in the way that it has. President Mobutu is not exactly what you'd call Jimmy Carter's type of foreign leader. He runs a crude police state of which the State Department, looking for a silver lining, has just said in its human rights report, "Generally, however, after interrogation non-political prisoners are not subject to repeated beatings." The United States professes not to know what kind of soup Zaire is really in, whether Cubans are training the Angolan mercenaries, or financing them, or merely offering moral support; or whether the emergency American military aid thus far sent or contemplated will do its intended job. There is an open-ended quality to Zaire's predicament—its long-developing economic predicament as well as its newly developing political one—and it raises the question of whether Zaire is for the United States still a good bet. We have had unhappy experiences with open-ended involvements of which Vietnam, of course, is Exhibit A.

The larger issue is how the United States intends to treat the disputes among black states which are endemic on the African continent. This is the first one to explode since Jimmy Carter became President—indeed, it is the first foreign military conflict of any kind in which he has involved the United States—and people are naturally looking at his policy for what precedents it may hold. We find his approach troubling. He has not explained the contingencies or stakes which require such an abrupt American response, nor the risks of delay. He has not indicated that the United States is moving by diplomatic means, say, by appealing to the Organization of African Unity or even to the United Nations, to seek a peaceful resolution of the dispute. He came to the White House promising to shoulder more responsibility for Africa's and the developing world's economic welfare. It is odd to see him reacting to his first challenge in the pattern of the previous administration: hustling more security assistance to a longtime client state which may or may not be under Cuban guns. Why doesn't Mr. Carter slow down and say what his policy is and where he thinks it will fetch us up.

[From the Washington Post, Mar. 18, 1977]

WHY ZAIRE? (II)

Why Zaire? We asked on Wednesday. The moment seemed right, since Secretary of State Vance was going up to the Hill that very day to explain why the administration had suddenly rushed two planes full of military gear to that jittery African nation. But, as far as we can see, he didn't really explain it at all. Breaking into the old Foggy Bottom mumble, he merely asserted that if the Katanga soldiers who've crossed from Angola into Zaire succeeded in threatening the copper mines, Zaire's stability would be imperiled. He provided no serious rationale at all for why the stability of Zaire is of such importance to the United States that the administration should ignore its own professed concern for human rights (Zaire is a real loser in that department), identify itself with one of Africa's more corrupt and ineffective governments, and accept an involvement in a dispute with such a raw, ragged, runny look to it. The stability of Zaire: is that what the Carter administration's brave new African policy means? Shades of John Foster Dulles, Dean Rusk, Henry Kissinger and the whole balance-of-power gang.

If Secretary Vance's performance on Zaire was dismal, however, that of the International Relations Committee was appalling. Where are the no's of yester-year? What happened to those vigilant tigers supposedly so ready to ensure that executive power is wisely and well used? Lapping cream out of the administration's saucer, that's what. Aside from some sharp questions by Rep. Don Bonker (D-Wash.)—questions which Mr. Vance slipped by—the rest of the committee simply ignored its responsibility to check on what is after all the Carter administration's first brush with a foreign firefight. It was enough to make you wonder where Congress had been for the past 10 or 20 years.

No, we do not think that Zaire is "another Vietnam." But we do think that the administration has reacted rashly and reflexively to an old client's dubious appeal for emergency aid. Is Angola, in helping a dissident group launch forays into Zaire, doing anything that Zaire has not done recently, and may even still be doing, to Angola? Cannot a way be sought—in particular, by Zaire's European or other African friends—to tame by diplomatic means the running dispute between Angola and Zaire? Are the United States' accumulated obligations to Zaire so overwhelming that the administration could not briefly pause to see what else might be done? At the least, could not the Secretary of State have deigned to spell out the considerations which seemed to him to make it necessary to fly to President Mobutu's aid? This is the Carter administration, isn't it?

SELLING ARMS TO THE ENEMY

HON. STEVEN D. SYMMS

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. SYMMS. Mr. Speaker, for sometime I have been concerned about the transfer of U.S. high technology to the Soviet Union—especially computer technology. During the last 4 years some of the best analyses of this technology transfer have been done by Miles Costick. His latest study entitled "United States-Soviet Computer Capabilities" is scheduled for publication in the spring of 1977 by the Georgetown University Center for Strategic and International Studies.

The March 1977 issue of Conservative Digest contains an article by Mr. Costick which highlights the issue of U.S. computer sales to Russia and outlines the dire consequences. I would like to commend this article to my colleagues in Congress:

[From Conservative Digest, March 1977]

SELLING ARMS TO THE ENEMY

(By Miles Costick)

During the last four years American companies have sold the Soviet Union more than $300 million worth of advanced computer equipment—material crucial to modernizing the Soviet military machine.

The giants of our computer industry—including Control Data, IBM, Sperry-Rand and General Electric—have sent Russia and East Europe computers, peripheral equipment, software and manufacturing know-how, and have even built computer component plants for Iron Curtain countries.

And a major new deal that will further erode U.S. security is in the works. Late last year Control Data received permission from the National Security Council, after intervention by Henry Kissinger, to sell very sophisticated computers to America's two biggest enemies.

The Soviet Union will receive the Cyber 7300, a large scientific computer ideal for military applications and about 15 years ahead of current Soviet computer capability.

And Communist China will acquire the Cyber 172, used in the U.S. for antisubmarine warfare, nuclear weapons calculations, and large phase-array radar systems that track ICBMs.

Computers are essential to modern warfare. Computers themselves are used for both navigation and weapons guidance in modern missiles, aircraft, tanks, high-performance satellite-based surveillance systems, ABM defense systems and submarines.

And without computers modern weapons systems could not be built, integrated, tested, deployed, kept combat-ready or operated.

All technologies revolutionizing warfare, such as giros, lasers, avionics, nucleonics, propulsion and computers themselves, are dependent on computers.

For example, the world's most advanced computers (ILLIAC IV, CDC STAR-100, Texas Instruments' ASC and Goodyear's STARAN IV) were built with the aid of several large computers.

In short, today's emerging technologies are as dependent on computers as the technologies of the first industrial revolution were dependent on energy.

In the present era of technological competition with the Soviet Union, the United States enjoys now and is expected to maintain a 10 to 12 year advantage in computer technology, provided there are no ill-considered exports to the Soviet Union and other communist countries.

HENRY SAID YES

Computer technology in the Soviet Union is almost totally dependent on Western imports, and there are several significant features of Western computer technology that the Soviets have failed thus far to acquire.

The first is mass production of high-quality computer components, subsystems, and systems. The second is reliability engineering and quality control. The third is the creative dynamism characteristic of the Western computer scene.

The fourth is computer software: Soviet software today is no further advanced than Western software was in 1960. However interesting Soviet work on the theory of automatic programing may be, it has not led to software that economizes programing time and makes computers more accessible to users.

The fifth area of weakness in Soviet computers is memory storage, both internal and external. Even the most advanced computers produced in the Soviet Union and East Germany have acute memory problems.

The Soviets are making every effort to close these gaps by buying them from us. And they have scored notable successes with this strategy. (They also continue to steal or illicitly buy secrets from private citizens.)

Control Data has been one of the Soviets' richest sources. The company recently agreed to develop jointly with Moscow the next generation of larger highspeed computers, the Cyber series, and to build a plant that can manufacture them.

The Cybers are high-speed, large-volume scientific computers, suitable for military and intelligence operations. Only 12 such installations exist in the world, and they belong to such organizations as the Atomic Energy Commission, the U.S. Air Force, NASA and the National Security Agency.

This Control Data-Soviet venture would create a serious competitor for U.S. computer sales overseas and would sharply upgrade Soviet military potential. American sources in Moscow put the agreement's ultimate worth at more than $500 million.

In the last dozen years Control Data has sold communist countries about 40 computer systems, and has established a joint opera-

tion with Romania, which it is now expanding to produce peripheral equipment, integrated circuits and software.

The company's strategy is to increase its share of the communist bloc computer market, and, in combination with communist computer producers, to increase penetration of the developing countries' markets.

And Control Data has an agreement pending to manufacture 100-megabit disk memory units in the Soviet Union, which would considerably enhance Soviet computer capabilities.

The granddaddy of computer companies, IBM, has frequently sold advanced computers to the Soviet Union and its satellites. It sold the USSR what is believed to be the largest industrial computer in the world for use at the Kama River truck plant, and in 1974 it sold Hungary the advanced 370–155.

This sale, which required the personal approval of Kissinger, violated U.S. policy in that the computer was more powerful than the buyer required, was unknown in the East, and could be copied or diverted for military purposes.

IBM has several other pending computer orders from the Soviet Union, including a triplex 36065 computer system for Soviet air traffic control, which would have obvious military uses.

Other firms selling computer equipment, know-how or manufacturing capability to the Soviet bloc include Singer Dataproducts and Willi Passer.

While America would never consent to give complex military technology directly to the Soviet Union, we have entered into commercial and scientific agreements which have the same effect.

As former Deputy Defense Secretary William Clements has said, "There have been some significant losses of advanced technology to the communist countries, particularly in electronic and very exotic, sophisticated machine tools."

And Britain's NATO envoy, Sir John Killick, recently stated, "Clearly something is amiss when the Soviet Union's all-consuming military machine continues to gather speed and strength, while its economy is increasingly dependent on Western exports."

Yet six high-technology trade associations have warned Congress against permitting the Department of Defense to control transfer of strategic technologies.

"In a civilian government such as ours, the control and administration must reside apart from the military," recently demanded Peter F. McCloskey, president of the Computer and Business Equipment Manufacturers' Association.

Control Data's William Norris puts it more bluntly, "Our biggest problem isn't the Soviets, it's the damn Defense Department!"

WHAT CAN YOU DO

If you believe that Control Data Corporation and other U.S. companies should not be allowed to sell advanced computer technology to the Soviet Union or other communist countries, write President Jimmy Carter, the White House, Washington, D.C.

BALANCE(S) OF POWER SERIES—PART V (ii) (a): ARE WE UNDERRATING SOVIET MILITARY MANPOWER?

HON. JOHN BRECKINRIDGE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. BRECKINRIDGE. Mr. Speaker, in large part, the basic measure of a nation's fighting capability is the talent and dedication of its fighting men. I am privileged today to continue my "Balance(s) of Power" series begun in the last Congress, and focusing on the manpower requirements of the Soviet Union. Col. William F. Scott, writing for Air Force magazine in April 1974, notes that "in a protracted conventional conflict—manpower could well be the decisive element when a rough parity in weapons exists." Colonel Scott provides a number of insights into Soviet training, the interaction of Soviet military and nonmilitary training organizations, as well as a glimpse at the realistic figures of Soviet military manpower capabilities. While the generally accepted figure is about 3½ million troops, this figure fails to take into account the large number of KGB troops and border patrols who are only by the most stringent definition, "paramilitary." While it is true that they perform functions which in large part do not exist in Western democracies—for example, massive border guard detachments for concentration camp guards—the fact remains that they are trained troops available for combat should the need arise.

Colonel Scott's assessment is not comforting; it is sobering. As I pointed out in my previous statement on U.S. manpower, our standing Army has declined to a point where the 775,000 men presently in the U.S. Army represents the lowest number of Army personnel on active duty since the dark, prewar days of 1940.

Colonel Scott's article follows:

ARE WE UNDERRATING SOVIET MILITARY MANPOWER?

During the past six months, the media have given much time and space to the rapidly increasing quality and quantity of Soviet weapons. There has been abundant comment on Secretary of Defense James R. Schlesinger's August 1973 revelation of four new Soviet ICBMs. Millions of words have been spent on the October Middle East war, which demonstrated both the sophistication of several Soviet conventional weapons that had not been used previously in combat, and the USSR's ability to provide enormous quantities of weapons to its client states.

Hardware is one part—a very important one—of a nation's military strength. Another essential is manpower. Beyond gross manpower figures announced by the USSR, little has been published in this country about the size, recruitment, training, and service commitments of Soviet military manpower. Much of what has appeared is inaccurate, incomplete, or both.

In a protracted conventional conflict—or in a general nuclear war as envisioned by Soviet military writers—manpower could well be the decisive element when a rough parity in weapons exists. Today, in many important categories of nuclear and conventional weapons, the US is in a position of numerical—and in some cases also of qualitative—inferiority to the USSR. We can ill afford to delude ourselves about the true size and quality of the USSR's pool of trained military people. This is especially true today, as pressure for further reduction of US troop strength continues, as uncertainty over our ability to recruit and retain capable young people in an all-volunteer force mounts, and as negotiations for force reductions in Europe proceed.

ORGANIZATION OF SOVIET ARMED FORCES

In order to assess the active-duty strength of the Soviet Union's entire military establishment, it is first necessary to examine how Soviet forces are organized.

Under the Ministry of Defense, roughly comparable to our Department of Defense, are five separate services: Strategic Rocket Forces, Ground Forces, Troops of National PVO (aerospace defense), Air Forces, and Navy. The strength of these forces is given by a number of analysts as 3,425,000. There is an undisclosed number of other troops, such as those in civil defense and in military construction which are separate entities under the Ministry of Defense.

In addition to Ministry of Defense organizations are additional forces that are usually referred to by Western writers as "paramilitary." They are units of the Committee of State Security (KGB) and of the Ministry of Internal Affairs (MVD). The former include the Border Guards and other specialized units, reported to number about 125,000. MVD troops are a backup for the regular police force that maintains order throughout the USSR and are said to have a strength of 175,000. By Soviet law, both are part of the armed forces of the USSR.

Only by the most general interpretation of the term can KGB and MVD troops be considered "paramilitary." They are equipped with tanks, armed vehicles, and in some cases aircraft and helicopters. The KGB has its own Navy. The 1969 battle between Soviet and Chinese forces on Damanskiy Island was fought by KGB troops—not by those of the Ministry of Defense.

The period of obligatory service is two years for those serving in the Strategic Rocket Troops, Ground Forces, Troops of National PVO, Air Forces, the air arm of the Navy, the MVD, and ground units of the Border Guard. Service in the Navy, excepting its air arm, and the naval units of the Border Guard is three years. Service in the specialized troops of the Ministry of Defense probably is two years. Only one year of service is required of certain categories of males with higher education.

These periods of obligatory service, which seem unreasonably short in an age of sophisticated weapons, are compensated for by an elaborate program of premilitary training that will be discussed later.

SOME INSIGHTS ON ACTUAL STRENGTH

Under Soviet law, "Information on the organization of the armed forces, their number, location, combat capability, armaments, equipment, combat training, the moral/political status of troops, their material and financial support is a military secret." According to the US press, all data on the Soviet armed forces used during the SALT I negotiations was provided by the United States. Hence, the number of Soviet youths called up each year under universal military service (which began in 1939 and was not terminated after World War II), as well as the total strength of the Soviet armed forces, has never been revealed.

The number of males reaching military age in the Soviet Union has varied widely during the past fifteen years. This variation may have impacted upon the size of the Soviet forces, and the length of service demanded of the recruits. It is estimated that in 1957 the number of eighteen-year-old males was 2,380,000. For a five-year period, this number showed a steady decline, reaching a low of 917,000 in 1962—the year of the Cuban missile crisis. With 20,000,000 deaths attributed to World War II, and with millions of men at the front, few babies were conceived in 1944 and 1945. Khrushchev's emphasis on nuclear weaponry in the early 1960s may have been in part an effort to compensate for his lack of military manpower. The decline in youth of military age which had started in 1957, was not recouped until 1973, at which time the number was estimated at 2,383,000.

It is not known what percentage of Soviet males are excused from military service for physical and other reasons. Age of parents, number of younger brothers and sisters, and other reasons may defer military service until age twenty-seven, after which the individual

is excused. A number of people who have spent considerable time in the Soviet environment suggest that fewer than thirty percent of Soviet youths are exempt from military training. If this is approximately correct—and it may be conservative—then as many as 3,300,000 conscripts may be in the Soviet armed forces at any one time. When this figure is combined with the officers, warrant officers, noncommissioned officers, and the recruits who have volunteered for additional service, the size of the Soviet armed forces may well be more than 4,500,000.

It seems almost certain that the KGB and MVD forces also are larger than usually reported. Some sources place the strength of the KGB at about 500,000. When the size of the Border Guards districts is taken into consideration, together with the tension along the Chinese border, a strength of 175,000 troops appears wide of the mark. It also seems likely that MVD troop strength is closer to 275,000 than to the 125,000 with which they generally are credited. A force larger than that would be needed just to guard and supervise the estimated 2,000,000 Soviet citizens who are in labor camps.

LEADERSHIP IN THE SOVIET ARMED FORCES

Critics of the military in the United States often point to the number of officers in our own armed forces, especially in the senior ranks. In the Soviet armed forces, the officer strength may be more than double that found in the United States.

An indication of the Soviet officer strength is reflected in their military school system. There are seventeen Soviet military academies that correspond roughly to our war colleges and staff colleges. These academies generally are headed by marshals or four-star generals. By regulation, an academy head is at the same rank level as the commander of a military district or fleet. Also, by regulation, heads of departments within the academies are general officers. Buildings and grounds of these academies are impressive. Course length at most academies is three years—considerably different from the much shorter courses at war colleges in this country.

There are 104 known "higher military schools" in the Soviet Union that are roughly the equivalent of the military academies in the United States. Insofar as is known, all of the schools are commanded by general or flag officers. Age of entry is between seventeen and twenty-one. After a four-year course (except for five years at certain naval schools), graduates receive engineering or equivalent degrees and are commissioned as lieutenants. Judging from the outside appearance of these schools their student body would appear to be between 500 and 1,000.

In addition, there are twenty-two other "military schools," with student entry also between ages seventeen and twenty-one, and which provide three-year courses. Graduates are commissioned as lieutenants and receive technical degrees.

Assuming an average student enrollment of 700 at the higher military schools and military schools, this total student body would be in excess of 88,000.

The Soviet officer educational program includes a study area that is seldom found in the United States—that of military science. Hundreds of officers hold this degree at the candidate level, a degree corresponding approximately to our Ph.D. A considerable number of officers are doctors of military science. The doctorate in the Soviet Union is awarded only after an individual is a recognized authority in his field and has defended a dissertation. Among the senior officers holding this degree are Chief Marshal of Tank Troops P. A. Rotmistrov and Marshal of Aviation G. V. Zimin.

Training and morale among the Soviet armed forces appear excellent. In particular, those troops assigned to the Soviet "Groups of Forces" in Germany and other Eastern European nations present a combat-ready appearance, as do the troops in Khabarovsk, the headquarters of the Far Eastern Military District. In contrast, many of the construction troops appear as laborers in military uniform.

SOVIET RESERVISTS

The Soviet armed forces are backed up by a reserve system that has no counterpart in the United States. When an individual finishes his universal military service he is "discharged into the reserves." He remains in the first category of reserves until age thirty-five, the second category until age forty-five, and the third until age fifty. In the Soviet Union there are at least 11,000,000 male reservists under thirty who have had military training, and additional millions in the second and third age categories. This is a far cry from the figure of 3,000,000 reserves that is often reported.

One purpose of the massive Soviet officer strength discussed earlier is to man the cadres from which new units could be formed by mobilization of the reserves. Soviet military spokesmen emphasize that their entire military structure is designed around the cadre system. Throughout the entire Soviet Union there are military commissariat offices, which keep detailed records for each area of all personnel and equipment that have a mobilization potential. Even bicycles are included. As a result of this organizational structure, combined with a highly disciplined and control society, the size of the Soviet armed forces probably could be doubled in less than two weeks.

There is a great difference in the training and use of Soviet and US reserve forces. For example, prior to the Soviet invasion of Czechoslovakia in 1968, a number of Sovietologists thought that the shortage of military transport organic to each division would limit the offensive capability of the Soviet forces. What was not realized at the time was that trucks and other vehicles used in the Soviet civilian economy have specific mobilization assignments. Also, selected drivers in the military reserve are assigned to specific trucks.

Certain categories of reserves were called up for maneuvers in the summer of 1968, along with vehicles. As they were withdrawing from their maneuver area in Poland, a change in the order of march was given, which took them into Czechoslovakia, completely surprising the West. A considerable part of the force was moved by trucks that, a few weeks earlier, might have been hauling bricks for the construction of a new Intourist hotel in Kiev.

PREMILITARY TRAINING

As suggested earlier, two years is an insufficient time in which to take a recruit from basic training to the mastery of sophisticated weapon systems. Accordingly, the Soviet leadership has provided a comprehensive premilitary training program, designed to assist the recruit in becoming effective as a soldier in a minimum period of time.

"Bringing up a future soldier begins, if you please, with childhood," according to a recent Soviet military journal. Children's books, glorifying war and military life, and attractively illustrated are sold at extremely low prices. Another Soviet spokesman wrote that "the formation of a soldier . . . begins at the first signs of maturity, during the time of adolescent dreams."

Twenty-five million Soviet boys and girls between the ages of eight and fifteen are members of the Pioneers, a Communist young peoples' organization. Their official handbook has thirty-five pages devoted to "war of the future." This book explains one of the military-sport games, Zarnitsa, first started in 1969, in which 15,000,000 Pioneers have participated in unit exercises at one time. The basic unit for the game is the battalion, consisting of a commander, his deputy for political matters, and detachments of soldiers. In each detachment there must be a commander, political officers, scouts, riflemen, medical corpsmen, cooks, and an editor for the battalion combat journal. These games are widely publicized in the Soviet press and on television.

Another phase of premilitary training is conducted by DOSAAF—the Volunteer Society for Cooperation with the Army, Aviation, and the Fleet. This organization may be joined by boys and girls fourteen years of age and above. DOSAAF has 308,000 separate groups and 2,700 major units. Its active membership officially is reported at 9,000,000, with another 5,000,000 taking part in its sports activities. Some sources believe that 40,000,000 people use DOSAAF's facilities. Currently, DOSAAF is headed by an active-duty marshal of aviation, with numerous other officers assigned, including political officers.

The 1967 modification to the military-service law, which reduced the average length of service from three to two years, places overall supervision of premilitary training in the Ministry of Defense, with specific help to be given by DOSAAF and the various ministries concerned with education. If not truly a nation-in-arms, the USSR is, at the least, a country in which most adults have had some military training and in which every effort is made to create interest in military affairs and to enhance the prestige of the military profession.

UNIVERSAL MILITARY SERVICE AND THE COMMUNIST PARTY

Many analysts in the West attempt to study conditions in the Soviet Union through a "mirror-image" of like conditions they believe exist in the United States and in other NATO nations. Some of these analysts feel that Soviet military leaders are in conflict with party leadership in seeking to maintain the size of the armed forces at a high level. In actual practice, this "mirror-imaging" seldom is applicable with respect to the Soviet Union. Party theoreticians appear to give full support to universal military service. The Soviet armed forces are the arm of the Communist Party, with the task of "protecting the gains of socialism" and of ensuring the "historic inevitability of the downfall of capitalism."

According to General Secretary Leonid Brezhnev, "In our country military service is not only a school of combat skill. It is also a good school of ideological and physical steeling, of discipline and organization." Universal military service provides the Party with the opportunity to have Soviet youths for a final period of intensive political indoctrination, under completely controlled conditions. All members of the Soviet armed forces, from officers to conscripts, are required to attend periods of political indoctrination each week. Political officers are told exactly what and how to teach. They are attempting to mold the "new Soviet man," one of the goals of Marxism-Leninism.

THE SOVIET ECONOMY AND THE MILITARY CONSCRIPT

In the United States, military manpower costs absorb slightly more than forty percent of the total military budget. (Total manpower costs—military and civilian—account for more than half of the US defense budget.

Soviet conscripts receive only token pay. The cost of their food is reduced by the maintenance of military farms, on which they themselves provide the labor. Soviet barracks for enlisted personnel are simple and spartan to an extreme. Men sleep on cots in huge, open bays. Their personal possessions are few. Food, clothing, and shelter are only a fraction of similar costs in the armed forces of the United States.

But that is not all. The Soviet conscript performs a valuable service to the Soviet economy by providing inexpensive and disciplined manpower. Military troops work on projects such as the buildings on Moscow's Kalinin Street or Moscow State University, and the ministry for which the work is performed pays some reimbursement to the Ministry of Defense. Payment is only a transfer of funds from one ministry to another. The labor itself is practically donated.

In addition to performing construction work for the civilian economy and maintaining the military farms, conscripts frequently can be seen in fields helping with the sowing and harvesting and doing a wide variety of other manual tasks. In pouring rain and in bitter cold they lay pipe, dig ditches, build railroads and roads in areas seemingly far removed from military installations.

Thus, the Soviet military conscript is not completely out of the Soviet labor pool during his period of obligatory service. During his military-training period he also may make contributions to the economy.

IMPLICATIONS FOR THE UNITED STATES

From this brief discussion of Soviet military manpower, several significant facts emerge:

A basic tenet of Soviet military doctrine is that the entire Soviet people be prepared for the eventuality of war.

The Communist Party gives full support to universal military service and the maintenance of large forces, for reasons that are both political and military.

Soviet military manpower costs are dramatically lower than those of the US.

Active-duty military forces of the USSR probably are about a million larger than usually reported, and roughtly twice as large as those of the U.S.*

Soviet active-duty forces are backed by reserves that may be from two to three times larger than generally recognized, and greater than those of the US by an order of magnitude.

Faulty information about the size and organization of the Soviet armed forces may lead to inadequate force programming on our own part. We might well ponder the desirability of an all-volunteer force—and its implications for the preparedness of this nation—when contrasted to the system of universal military service in the Soviet Union.

*In April, 1974.

SOUTH YEMEN AND THE UNITED STATES

HON. DON BONKER

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. BONKER. Mr. Speaker, I want to call attention to a report which appeared in the Washington Post of February 22, 1977, to the effect that South Yemen is to some extent being brought to heel by a carrot approach of Saudi Arabia. For one, the People's Democratic Republic of Yemen—as it is more formally known—apparently was persuaded to end its support of the agitation in Oman's Dhofar province, something that worried the United States and Iran as well as the Saudis; and it has even taken steps to a reconciliation with more Western-oriented North Yemen.

This has importance for the stability of the region, and the interests of the United States, because the Soviet influence in the Marxist state of South Yemen has been rumored to be considerable and potentially a major challenge to ocean-going transit in the area. Taken together with an apparent Soviet presence in Somalia and accessibility to prospective new states in Eritrea and Djibouti, it has caused serious concern to some of our strategic thinkers.

In such circumstances, it is critical to know just what the Soviet threat is in the area, before we determine the nature of, or even need for, a response. It is all too easy for American action to be construed by an adversary, however unfairly, as provocation prompting counter-action. The Soviet presence in Aden and that region generally—and the danger of that presence—should clearly be established, and milder methods to countervail it examined, before we find ourselves launching into a spiraling Indian Ocean involvement, or continuing too blindly to support a seemingly anti-American and brutal government in Ethiopia in the hopes of maintaining influence in the Red Sea. The article follows:

[From the Washington Post, Feb. 22, 1977]

YEMENI LEADERS MEET; TENSIONS APPEAR EASED

(By Thomas W. Lippman)

CAIRO, February 21.—Another of the localized conflicts that make the Arab world so volatile and impede the unity that Arab leaders profess to seek was apparently defused this past week with an amicable meeting between the heads of state of North and South Yemen.

Official accounts of their talks said they agreed on "genuine and sound steps" toward unification.

Diplomatic specialists in Yemeni affairs said they doubt that this will actually result in a merger of the two states, which have quite different economic and political orientations. Rather, they said, it indicates that the two may turn away from their former hostility to cooperation on matters of mutual interest.

For Marxist South Yemen, the talks mark another step out of its long diplomatic isolation, a process that began when it established diplomatic relations with Saudi Arabia a year ago and, in exchange for Saudi economic aid, cut off active military support for the Communist-dominated insurgency in neighboring Oman.

Before that, South Yemen—the poorest Arab country—was a pariah on the Arabian peninsula, almost wholly dependent on the Soviet Union.

Improved relations between the two Yemens certainly have the support and probably the active encouragement of Saudi Arabia, which provides economic aid to both. The border between the Yemens meets the sea at the narrow Bab el Mandeb strait, the entrance to the Red Sea which is of vital strategic importance for Saudi Arabia and its allies, Egypt and Sudan.

The Saudis have been working actively for regional efforts at protecting the strait, which they see as possibly threatened by the chaos in Ethiopia and by potential struggles among the African states on the west side of the strait over the French Territory of the Afars and Issas, which is to become independent this summer.

Ibrahim Hamdi, president of the Yemen Arab Republic, or North Yemen, and Salem Rubaya Ali, head of state of the People's Democratic Republic of Yemen, or South Yemen, met at the border town of Qatabah. It was believed to be their first meeting on Yemeni soil since 1974, when Hamdi took power in North Yemen in a coup—a move that effectively ended previous negotiations toward a merger.

Those talks began after a border war between the Yemens in 1972. Despite historic tribal and religious ties, the two countries were uneasy neighbors after South Yemen, the former British colony of Aden, gained independence in 1967.

An Arab League mediation mission helped end that war with a peace agreement in which the Yemens agreed to establish a single state with its capital at Sanaa, now the capital of North Yemen. That agreement went the way of so many similar accords among Arab neighbors, with no real merger ever actually effected. By the spring of 1975, after the pro-Saudi, pro-Western Hamdi had taken power in Sanaa, North Yemen was accusing South Yemen of "acts of sabotage" over the border.

Then came Saudi Arabia's opening toward South Yemen, and with it Saudi pressure for a lessening of tensions on the peninsula. In October, the two Yemeni heads of state held a fence-mending session at the summit conference in Cairo, where other Arab leaders are said to have suggested that they renew their cooperation.

The outcome of their meeting last week fits in with the pattern of events in the Arabian peninsula that has developed over the past three years—a lowering of hostility and tension under the diplomatic patronage of Saudi Arabia, and a steady lessening of Soviet influence.

Particularly in North Yemen, which formerly was pro-Soviet and received substantial Soviet military assistance, the turn to the West under Hamdi has been dramatic. Last year he turned to the United States for arms, and he is currently courting France assiduously.

Foreign Minister Abdulla Asnaj was in France last week for talks covering, among other things, the proposed independence of the French colony across the Bab el Mandeb. French Foreign Minister Louis de Guiringaud is understood to have accepted an invitation to visit Sanaa.

END OF A REMARKABLE ERA

HON. JAMES ABDNOR

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 23, 1977

Mr. ABDNOR. Mr. Speaker, publication of the March 17, 1977, edition of the DeSmet (S. Dak.) News brings to a close a remarkable era in South Dakota journalism. After nearly 94 years the Sherwood family is no longer in the publishing business.

The involvement of the Sherwoods with DeSmet and the new-community service profession dates back to a time before South Dakota became a State. With the founding of nearly every community came the establishment of its link to the outside world—its newspaper.

Carter P. Sherwood had come west from Wisconsin in 1882 when homesteading was at its height in Kingsbury County. Along with Mark A. Brown he founded the DeSmet Leader. By the end of 1883 Sherwood was the sole owner and continued as its publisher until his death in 1929. Since that time his son, Aubrey Sherwood, who had associated with the venture in 1919, has been the publisher supervising its weekly publication, and

ushering it from the letterpress into the offset era.

In a feature article, Sunday, March 13, 1977, the Huron (S. Dak.) Daily Plainsman traced the Sherwood era in DeSmet and the many contributions the family has and is still making to not only the DeSmet community but to all of South Dakota. I commend this remarkable record of service to the attention of my colleagues:

AUBREY SHERWOOD RETIRES: END OF ERA AT DE SMET NEWS

(By Chuck Raasch)

DE SMET.—An era that stretches back to the homestead days is coming to an end in De Smet this week.

On Thursday, The De Smet News, the weekly publication that has served this county seat city for almost a century, will be taken over by Dale Biegan, a former Brookings resident who is purchasing the operation. And for the first time since 1883—almost 94 years—the paper will not be published by a member of the Sherwood family.

Aubrey Sherwood, 82, has been the publisher of The News since 1929, and has been affiliated with the paper on a full-time basis since 1919. Before that, his father had published the newspaper since 1883, when he had come west from Wisconsin and bought the fledgling operation.

Under the Sherwood name, The News has become one of the most respected and innovative weekly newspapers in South Dakota, acting as the voice of one of Central South Dakota's most progressive communities.

Listening to him speak, one gets the impression that as he looks back over his 50-plus years in country journalism, Aubrey Sherwood wouldn't have wanted it any other way.

But, he says, that was not always the case.

A graduate of De Smet schools, Sherwood went on to South Dakota State College in Brookings, graduating with a degree in agriculture in 1917. (He says that oftentimes people say he has a degree in journalism, but points to the fact that State College didn't offer such a degree in 1917). Sherwood had several offers—one as a writer for the Dakota Farmer magazine, one as an extension field entomologist (the first ever in South Dakota), and another as a graduate assistant in journalism at the University of Wisconsin.

However, he took a teaching job in Minnesota for six months, went to the service in June of 1918, and learned airplane mechanics instead.

He says that at that time, being a printer and journalist was the last thing on his mind. But a case of the influenza changed all that, because in 1919, he returned home sick with the flu, stayed at his parents' house several weeks to recover, and decided to go into the publishing business with his father.

He says that his going into the newspaper business was "partly need and partly possibility. If I was trained to be an editor for Dakota Farmer, why couldn't I edit and write for a weekly newspaper?" he said. "But my father said 'why do you want to give up a good job and come into a little news office?' And I guess, strictly from a financial standpoint, it was probably not the right thing to do. But there's never been a time when I've regretted it."

Sherwood described his father as a good printer, who didn't know much about journalism. "We were a darned good team together," he said. "Dad would run the shop and I'd take care of the news I could run all over the county chasing down a story, and he'd hold down the base."

In 1925, his father gave him half-interest into the newspaper as a wedding present. In 1929, his father died after 46 years of publishing, and Aubrey took the operation over.

The changes in journalism have been "tremendous" since he started in the business, according to Sherwood. He said that his father put advertisements and editorials on page one, news and stories were usually short and most didn't have headlines.

Sherwood said when he started writing the news, the paper bought a linotype typesetting machine and one of the first self-feeding presses in the area. In 1969, The News became the first paper in South Dakota to convert to an offset printing operation, even before all of the state's daily newspapers.

Country journalism is a special field, according to Sherwood, and he says that even after almost 60 years in the business, he still enjoys it.

"There is no better field than a country newspaper—it's the most interesting work there is," said Sherwood. "Weekly newspapers are different than dailies, because a country editor writes for the people he meets every day on the street. You deal with your people from birth to death, through joys and sorrows—it's the most humanizing job in the field."

"I've been a community-promoting editor through the years, no doubt about that," he continued. "But it's all been honest and optimistic. The old joke was that when a country editor's friends got into trouble, he left town so he wouldn't have to print that news. But if it was in the courts, even if it was a friend, we printed it—we never left town."

Through the years, Sherwood cultivated a deep friendship with artist Harvey Dunn, a man for whom Sherwood had endless praise.

"I used to visit with Harvey on our front porch—sometimes until midnight," he said. "That man had a dominating personality, and he had eyes that could just look right through you. But you'll never find a kinder and more likable sort."

Sherwood was instrumental in having Dunn leave a large collection of his paintings in South Dakota, and donated the Dunn painting "Argument with a Sheep Man" to the Alumni Center at South Dakota State University.

He also served as the first president of the Laura Ingalls Wilder Memorial Society, and has written a short book on Harvey Dunn.

Now that he is selling his newspaper, Sherwood is moving into an office a few doors down the street, where he will sell Dunn prints and continue to work on the Wilder society, along with helping to promote various civic and area projects.

He will also, he says, be of any assistance to Biegan that he possibly can.

"I've had these keys a long, long time, and it's kind of hard to give them up," he said, pointing to a key for The News office. "When you're in something that long, your mind kind of stays there. I'll stay busy, and I'll help Dale as much as he wants me."

SENATE COMMITTEE MEETINGS

Title IV of Senate Resolution 4, agreed to by the Senate on February 4, 1977, calls for establishment of a system for and hearings of Senate committees, subcommittees, joint committees, and committees of conference. This title requires all such committees to notify the Office of the Senate Daily Digest—designated by the Rules Committee—of the time, place, and purpose of all meetings when scheduled, and any cancellations or changes in meetings as they occur.

As an interim procedure until the computerization of this information becomes operational, the office of the Senate Daily Digest will prepare such information daily for printing in the Extensions of Remarks section of the CONGRESSIONAL RECORD.

Any changes in committee scheduling will be indicated by placement of an asterisk to the left of the name of the unit conducting such meetings.

Meetings scheduled for Thursday, March 24, may be found in the Daily Digest section of today's RECORD.

The schedule follows:

MEETINGS SCHEDULED

MARCH 25

9:00 a.m.

Agriculture, Nutrition, and Forestry
Subcommittee on Nutrition
To hold oversight hearings on the food stamp program.
322 Russell Building

Foreign Relations
Foreign Assistance Subcommittee
To hold hearings on proposed legislation to authorize funds for bilateral development assistance.
4221 Dirksen Building

9:30 a.m.

Armed Services
To hold hearings on the nomination of William James Perry, of California, to be Director of Defense Research and Engineering; to receive a report from Research and Development Subcommittee on the nominations of David E. McGiffert, of the District of Columbia, to be an Assistant Secretary, and Gerald Paul Dinneen, of Massachusetts, to be an Assistant Secretary, both of the Department of Defense; to be followed by closed hearings to receive testimony on the fiscal year 1978 authorization requests for the Energy Research and Development Administration with respect to national security programs.
212 Russell Building

Commerce, Science, and Transportation
Subcommittee on Aviation
To hold hearings on bills proposing regulatory reform in the air transportation industry, including S. 292 and S. 689.
5110 Dirksen Building

Human Resources
Alcoholism and Narcotics Subcommittee
To continue oversight hearings on existing alcohol and drug abuse education programs, and proposed legislation to extend such programs.
Until 12:30 p.m. 1224 Dirksen Building

10:00 a.m.

Appropriations
Defense Subcommittee
To continue hearings on proposed budget estimates for fiscal year 1978 for the Defense Establishment, to hear congressional witnesses.
1223 Dirksen Building

Appropriations
Interior Subcommittee
To continue hearings on proposed budget estimates for fiscal year 1978 of the Department of the Interior.
1114 Dirksen Building

Appropriations
Labor-HEW Subcommittee
To continue hearings on proposed budget estimates for fiscal year 1978 for programs for education of the handicapped, and for occupational, vocational, and adult education programs.
S-128, Capitol

Banking, Housing, and Urban Affairs
To hold hearings on S. 406, the proposed Community Reinvestment Act.
5302 Dirksen Building

Commerce, Science, and Transportation
Merchant Marine and Tourism Subcommittee

To hold oversight hearings on ocean shipping practices.
235 Russell Building
Energy and Natural Resources
Subcommittee on Energy Research and Development
To continue hearings on proposed authorizations for fiscal year 1978 for the Energy Research and Development Administration.
3110 Dirksen Building
Governmental Affairs
To continue hearings on S. 591 and 826, to establish a Department of Energy in the Federal Government to direct a coordinated national energy policy.
3302 Dirksen Building
Human Resources
To hold hearings on the nominations of Mary Berry of Colorado, to be Assistant Secretary of HEW for Education, and Ernest L. Boyer, of New York, to be Commissioner of Education.
Until 12 noon 4232 Dirksen Building
11:00 a.m.
Veterans' Affairs
To hold hearings to receive legislative recommendations for 1977 from officials of Amvets.
Until Noon. 1202 Dirksen Building
1:30 p.m.
Environment and Public Works
To consider the nominations of James Gustave Speth, of the District of Columbia, to be a Member of the Council on Environmental Quality; and Robert L. Herbst, of Minnesota, to be Assistant Secretary of the Interior for Fish and Wildlife; and to resume consideration of bills proposing amendments to the Clean Air Act (S. 251, 252, 253), 1:30 p.m.
4200 Dirksen Building

MARCH 28

9:00 a.m.
Appropriations
Agriculture Subcommittee
To resume hearings on proposed budget estimates for fiscal year 1978 for the Department of Agriculture, to hear public witnesses.
6202 Dirksen Building
9:30 a.m.
Commerce, Science, and Transportation
Subcommittee on Aviation
To hold hearings on bills proposing regulatory reform in the air transportation industry, including S. 292 and S. 689.
5110 Dirksen Building
10:00 a.m.
Appropriation
HUD—Independent Agencies Subcommittee
To resume hearings on proposed budget estimates for fiscal year 1978 for the Department of Housing and Urban Development.
1318 Dirksen Building
Appropriations
Public Works Subcommittee
To continue hearings on proposed budget estimates for fiscal year 1978 for public works projects, to hear Members of Congress and public witnesses.
Room to be announced
Appropriations
Transportation Subcommittee
To continue hearings on proposed budget estimates for fiscal year 1978 for the Federal Aviation Administration.
1224 Dirksen Building
Commerce, Science, and Transportation
Communications Subcommittee
To resume hearings to inquire into domestic communications common carrier policies (i.e., telephone, computer, etc.)
235 Russell Building
Energy and Natural Resources
Subcommittee on Energy Research and Development
To continue hearings on proposed authorizations for fiscal year 1978 for Energy Research and Development Administration's nuclear budget.
3110 Dirksen Building
Governmental Affairs
Energy Subcommittee
To hold hearings on S. 897, to strengthen U.S. policies on nuclear nonproliferation, and to reorganize certain nuclear export functions.
3302 Dirksen Building
Governmental Affairs
Subcommittee on Intergovernmental Relations
To resume hearings on S. 2, to require reauthorization of Government programs at least every 5 years (proposed Sunset Act).
6226 Dirksen Building
1:30 p.m.
Appropriations
Agriculture Subcommittee
To continue hearings on proposed budget estimates for fiscal year 1978 for the Department of Agriculture, to hear public witnesses.
6202 Dirksen Building
2:00 p.m.
Appropriations
Public Works Subcommittee
To continue hearings on proposed budget estimates for fiscal year 1978 for public works projects, to hear Members of Congress and public witnesses.
Room to be announced

MARCH 29

9:00 a.m.
Appropriations
Agriculture Subcommittee
To resume hearings on proposed budget estimates for fiscal year 1978 for the Department of Agriculture, to hear public witnesses.
6202 Dirksen Building
9:30 a.m.
Agriculture, Nutrition, and Forestry
Subcommittee on Rural Development
To hold hearings on medicare reimbursements for rural health care clinics.
322 Russell Building
Commerce, Science, and Transportation
Subcommitte on Aviation
To continue hearings on bills proposing regulatory reform in the air transportation industry, including S. 292 and S. 689.
5110 Dirksen Building
10:00 a.m.
Appropriations
Defense Subcommittee
To resume hearings on proposed budget estimates for fiscal year 1978 for the Defense Establishment, to hear congressional witnesses.
1223 Dirksen Building
Appropriations
HUD-Independent Agencies Subcommittee
To resume hearings on proposed budget estimates for fiscal year 1978 for the Department of Housing and Urban Development.
1318 Dirksen Building
Appropriations
Labor-HEW Subcommittee
To resume hearings on proposed budget estimates for fiscal year 1978 for the Office of Human Development.
S-128, Capitol
Appropriations
Public Works Subcommittee
To continue hearings on proposed budget estimates for fiscal year 1978 for public works projects, to hear Members of Congress and public witnesses.
Room to be announced
Energy and Natural Resources
Energy Production and Supply Subcommittee
To continue hearings on S. 977, to conserve gas and oil by fostering increased utilization of coal in electric generating facilities and in major industrial installations.
3110 Dirksen Building
Government Affairs
To continue hearings on S. 591 and S. 826, to establish a Department of Energy in the Federal Government to direct a coordinated national energy policy.
3302 Dirksen Building
Governmental Affairs
Subcommittee on Intergovernmental Relations
To continue hearings on S. 2, to require authorization of Government programs at least every 5 years (proposed Sunset Act).
6226 Dirksen Building
Select Intelligence
Subcommittee on Budget Authorization
To resume closed hearings on proposed fiscal year 1978 authorizations for Government intelligence activities.
S-407 Capitol
1:30 p.m.
Appropriations
Agriculture Subcommittee
To resume hearings on proposed budget estimates for fiscal year 1978 for the Department of Agriculture, to hear public witnesses.
6202 Dirksen Building
2:00 p.m.
Appropriations
Labor-HEW Subcommittee
To continue hearings on proposed budget estimates for fiscal year 1978 for the National Technical Institute for the Deaf; the American Printing House for the Blind; Gallaudet College, and Howard University.
S-128, Capitol
Appropriations
Public Works Subcommittee
